after programing radio for local area, i hit function, turned dial and locked out everything(all the us states)so that when I was in scan mode it would just scan what I had programed,somehow i hit some buttons now it scans everything and I can not lock out the other programming. Is there a reset I could use to set back radio to default,the other option was to delete everything but my programig which I do not want to do please help me Ken

Press and hold 2,9, and Hold, power on the scanner to re-initialize the Memory and restore the Preloaded systems. When it asks do you wish to restore the preloaded systems press the E/Yes key. WARNING This will erase any personal programming you may have done to your DMA.

The preloaded system list for the BCD396XT:

SQK System

* 21 Alaska ALMR
* 22 Arkansas AWIN
* 23 Colorado DTRS
* 24 Connecticut State
* 25 Delaware
* 26 Georgia GEWIN
* 27 Idaho IIMARS
* 28 Ill StarCom21
* 29 Indiana SAFE-T
* 30 Kansas KSICS
* 31 Louisiana LATIE
* 32 Mass State Sys
* 33 Michigan MPSCS
* 34 Mississippi MWIN
* 35 Montana StateSys
* 36 NC VIPER
* 37 Nevada SRS
* 38 Ohio MARCS
* 39 Rhode Isl RISCON
* 40 SC Palmetto 800
* 41 SDakotaState
* 42 TX DPS
* 43 Utah UCAN
* 44 Virginia STARS
* 45 WVirginia WVIRP

If you are programming without the aid of software, for a conventional channel, you use the menu to get to the channel level and then Delete Channel is one of the choices. For a trunking system, you use the menu to get to the frequency and Delete Frequency is one of the choices.

If you're using software (which is highly recommended) you delete the frequency from the database of the software and then reupload the data to the scanner.

If you're not going to delete the preprogrammed systems for some reason, then you should just toggle them inactive using the quick keys. If you reset and reload the original systems you will still need to know how to toggle them on and off. You may as well learn to do that now since it's fundamental to operating the scanner. Unless you understand the quick keys, things will always be happening that are not under your control. Try the explanation that you'll find at

http://wiki.radioreference.com/index.php/Systems,_Sites_and_Groups

It will also help you better understand programming as well. But then, I'm biased. I wrote most of it. :)

3844. backlight mode squelch

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-03-23 12:20:51 UTC
From: Corey
Topic: 3844 Message: 3844

So I set the backlight mode to squelch. I thought that this would mean that the backlight comes on when the squelch is open, and then would turn off when the squelch closes. It doesn't seem to work this way though. It only stays on for a view seconds and then turns off. Is there any way to have the backlight stay on until the squelch is closed?

Conventional:
1. Using the Func & Scroll knob go to the CNV system you want to delete a frequency in.
2. Scroll to the frequency to delete and press Eyes key
3. Turn function knob two clicks to the left to Delete Channel > press Eyes key > Eyes key.

Trunked:
1. Go to the trunked system using Hold > Func > Scroll to trunked system
2. Press Menu button while F is displayed on the LCD screen.
3. Scroll to Edit Site
4. Select Site
5. Scroll to Set Frequencies
6. Select the Frequency you want to delete.
7. Turn Scroll knob two Clicks to the left to Delete frequency.
8. Press Eyes key to confirm deletion.
9. Press L/O key to return to the main radio display screen

I'm not sure that postings regarding sting ops are in the best interests of the law enforcement officers that serve us nor in the best interests of the continuation of our hobby. Seems this would lead to and justify more encryption, etc. Some things may be better left unsaid.

I was also very disappointed to see the light only flicker when the squelch opens.

By the time you look toward the radio, the light is out rendering the feature nearly useless.

Looks like something for the software update list.

Hi All:

Recently, I saw a show on TV and they talked about wildlife tracking etc. All of a sudden they focused on someone who was holding a simple hand held scanner with what looked a bit like a home-made antenna that he held in his hand attached to a stick or metal pipe with a line of coax about 2 ft long connected to the scanner.

I did some searching and did not really find anything specific and I was wondering if anyone might know of frequencies used or band segments used for this. I would suspect the signal would sound like a bleep of some sort as it is probably some sort of telemetry signal. I have heard some telemetry signals over the years and the nearest thing I could point to was that they may have been USAE rain gauges but never really confirmed this 100%.

Not a crushing desire to nail this down, this is more of a curiosity question

Regards

Bill NC1L

There are quite a few relavant links high in the list if you Google "wildlife tracker frequencies".

http://www.w4zt.com/freqs/wildlife.html lists some specific frequencies, but I get the impression that there could be many others.

The frequencies I've seen documented for wildlife tracking were in the 150 & 151 mhz range. The transmitters are very low power and transmit intermitent beeps which supposedly increase speed as the battery runs out. You can receive these on a scanner but you have to be pretty close.

And the antennas they use are usually compact beam (Yagi) antennas to
get a bearing on the signal. I personally would favor a DF antenna array
(typically four antennas in a 'square' spaced about 18" apart on each
leg) which will give you an instant bearing without the need to sweep
the antenna around.

Arrow Antenna is one company that makes the handheld antennas.

in <4bad56a4.a213f30a.484d.298cSMTPIN_ADDED@...>
about New announcement: FreeSCAN 0.9I Available wrote:

This new version incorporates bug fixes, new features and improvements.

FreeSCAN 0.9I
==========

.9I

-New: The old logging system did not seem to receive a lot of love, I have redone the logging
system to be a bit more presentable & user friendly.
-New: Added "Blind Friendly" mode - displays an additional menu in the main editor that allows
keyboard access to certain function that were only available with the GUI.
-New: The GPS entry dialog has been changed to be easier to use. Only one text box to fill out for location,
and the Google maps viewer is now integrated into the form so you don't have to view the maps in a browser.
-Change: The function to lockout all systems/sites simultaneously has been changed to only do one system at once.
This is handy for multi site trunk systems because now you can lock/unlock all sites with one click.
-Fix: Problem logging NACs on 996XT
-Fix: UASD file import causes audio type to be set to Analog on some systems
-900Mhz systems on XTs now downloaded back as 900Mhz systems rather then 800/900 sites to help with cross
compatibility
-900Mhz systems uploaded to XTs will now upload back as 800/900 mhz systems rather then Custom
-Fix: Issue with importing certain rare counties using the RR web service that cause a hangup
-Fix: RR has apparently added a new country to their database. As a result, clicking on the American
flag in the RR import screen caused Uruguay to load up instead of United States.
-Fix: Geocoding functionality has been tweaked to be a bit more reliable.
-Other bug fixes and improvements

You can view the full announcement by following this link:

3860. New to APCO 25

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-03-26 19:33:45 UTC
From: kstrsdn
Topic: 3860 Message: 3860

I am seriously considering purchasing a new 396XT next week. I have owned several non APCO 25 scanners over the years which were very easy to use by simply inputting the frequency and listening to both sides of the conversation for Public Service. I understand that a Radio Reference subscription is absolutely necessary to operate the radio properly. My question is, will this radio be easy to program and enable me to listen to both sides of the conversation for my local Police Departments without too much trouble. The last thing I want to do is spend the money on the radio, Butel software and a subscription to radio reference and then not be satisfied. Your comments would be greatly appreciated.

Thanks,
Dean

Topic: 3860 Message: 3862

Save the $ and use FreeScan instead of Butel software. As for your other questions knowing the system would help answer those and finally a subscription to rr isn't a. Must but can help if you don't like cut and paste or manual entry. That sad you sholud learn to program manualy before using software!

Subject: [BCD396XT] New to APCO 25

I am seriously considering purchasing a new 396XT next week. I have owned several non APCO 25 scanners over the years which were very easy to use by simply inputting the frequency and listening to both sides of the conversation for Public Service. I understand that a Radio Reference subscription is absolutely necessary to operate the radio properly. My question is, will this radio be easy to program and enable me to listen to both sides of the conversation for my local Police Departments without too much trouble. The last thing I want to do is spend the money on the radio, Butel software and a subscription to radio reference and then not be satisfied. Your comments would be greatly appreciated.

Thanks,
Dean

If you can learn to program it manually that will help you understand the radio and a little how the systems are set up - in my opinion. I have a 396T that I bought used after having the 296D, and I programmed the 296D manually - I was too lazy to learn how to hook it up to my computer, as I have owned and manually programmed my scanners like you have for a number of years. I had the 296D for a while as all or most of the systems here went to APCO 25. As everyone on this list will confirm it is a pain in the neck (or other body parts) to manually program these radios with these P25 trunking systems (396XT, et.al.). When I got the 396T and the Butel software and the subscription to RR it has taken my scanning to new heights. Its kinda like, why didn't I do this sooner ? Anyway, I think once you get past the learning curve, you will be really satisfied. From what I read here on this list the 396XT is a really cool radio and I am sure you will love it.

Les

From: dataman60435
Topic: 3864 Message: 3864

For the gentleman purchasing a 396XT im a older person, not very good with computers and software so i learned the Uniden programming using www.marksscanners.com easy programming manual to start on a 246xt, then 346xt and also now my 396XT which i have 50 Systems programmed by hand ...This ia a fantastic scanner that works great here on the Digital ILL Starcom 700/800 system...I really enjoy programming the 396XT and my personal opinion is it decodes the Starcom digital multipath system here better than the other brand....Just takes a little time studing "Systems", Groups etc....

3865. Freescan error message?

Hi All:

Just downloaded freescan and when I went to install it, it gave me a box
with a message saying Freescan has encountered a problem and needs to close,
Sorry for any inconvenience.

I cleared and did it a few times and got the same result.

Anyone else have this or know what is happening?

about New announcement: FreeSCAN 0.9I Available wrote:

This new version incorporates bug fixes, new features and improvements.

FreeSCAN 0.9I
==========

.9I

-New: The old logging system did not seem to receive a lot of love, I have
redone the logging
system to be a bit more presentable & user friendly.
-New: Added "Blind Friendly" mode - displays an additional menu in the
main editor that allows
keyboard access to certain function that were only available with the GUI.
-New: The GPS entry dialog has been changed to be easier to use. Only one
text box to fill out for location,
and the Google maps viewer is now integrated into the form so you don't
have to view the maps in a browser.
-Change: The function to lockout all systems/sites simultaneously has been
changed to only do one system at once.
This is handy for multi site trunk systems because now you can lock/unlock

all sites with one click.
-Fix: Problem logging NACs on 996XT
-Fix: UASD file import causes audio type to be set to Analog on some
systems
-900Mhz systems on XTs now downloaded back as 900Mhz systems rather then
800/900 sites to help with cross
compatibility
-900Mhz systems uploaded to XTs will now upload back as 800/900 mhz
systems rather then Custom
-Fix: Issue with importing certain rare counties using the RR web service
that cause a hangup
-Fix: RR has apparently added a new country to their database. As a
result, clicking on the American
flag in the RR import screen caused Uruguay to load up instead of United
States.
-Fix: Geocoding functionality has been tweaked to be a bit more reliable.
-Other bug fixes and improvements

Shouldn't need to uninstal old version first.

I just installed v0.9I and it works fine, (on XP SP 3)
Did you uninstall your previous version first ?

It works perfectly for me. I use Windows XP.

Hi Mel:

Thanks but I did that. I evven found a site that gave me a "fix" for it, but it did not work.

Since Freescan and Proscan both give me this message I suspect it is more of a windoze issue. I recently recovered from a serious virus hit and, while it is back working, I think it may have wreaked havoc on some of the programs in the computer and I had to clean them off and reinstall them, and I think windows is what I might need to reinstall. If not, a complete reformat may be needed.

Anyway, thanks for replying

Sometimes stuff builds up the your temp dir and can hinder an install. Try this, go to start run and type %temp% and hit enter. You can delete everything in that folder that pops up. Some stuff you can't and it's ok. Uninstall Freescan and reboot. After rebooting go ahead and install Freescan. If that doesn't work I have more tricks. What version of windows are you running?

3874. NAC

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-03-29 08:51:35 UTC
From: harleyuki
Topic: 3874 Message: 3874

Just got the XT Tuesday and am using FreeScan as the radio's programmer. I downloaded the freqs from my 'T' to FreeScan and then uploaded them to my XT. I need to add the NAC to my APCO-25 conventional freq. Does anyone know how to do this? I've looked everywhere I can think of and cannot find instructions for this. I have also looked thru the menu on the radio but haven't found what I am looking for. What am I doing wrong?

FreeScan works with both of these scanners flawlessly, I am very happy with this software, it is free but I did make my donation. I've used some of the other programming software and had problems, they may have been my fault but this FreeScan is quite user-friendly.

Any assistance with the NAC issue would be greatly appreciated!

You need to first set the channel type to Digital.

First of all, you don't HAVE to add the NAC - just as you don't HAVE to add a PL for analog operation. It can have a substantial advantage however if you have either co-channel or intermod issues.

That being said, I suspect I know why you can't find the NAC setting in FreeScan. Most likely you have the "Simple View" checkbox set in your conventional groups. With that checkbox set, you don't see the NAC field. NAC is right between "Mod" and "Audio Type" as long as the "Simple View" checkbox is NOT set.

In the scanner itself, you have to set the Audio Type to digital only and then it will ask if you want to set the NAC.

If that does not help, ask for more detail and I should be able to walk you through it.

And I bet that "simple view" is the source of 99% of the
issues/complaints about people not being able to use FreeScan.

The alert lights are also hidden by the "simple view" setting.

3878. Damage

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-03-29 20:23:59 UTC
From: SRehm24416@aol.com
Topic: 3878 Message: 3878

Today while listening to my 396xt as I have been since last May I noticed a rattle inside the case. I removed the four screws that are located on the top half of the rear of the scanner only to notice two of the screws were already loose. After getting all four screws out I removed the backing (along with two screws inside the battery compartment) and pieces of plastic started falling out. Three of the four "screw holders" ??? if you will for the top four screws were broken. The unit has not been abused, dropped, handled rough etc. (I am not going to treat a $500 piece of electronics badly). There is nothing I can think of that caused this, unless there may be a design flaw or plastic defect.

What are my options?

Thank you
Jeff

My first thought would be to contact Uniden.
How long have you had it?
Is it still under warranty ?
I doubt if it is a design flaw as I haven't had any probem with my BCD396XT.

Thank you all for your responses. Jim Walls, I followed your instructions and I have the NAC code in! Easier than I thought it would be. I had been getting interference from another user on one of the 3 digital freqs and that's why I wanted to have the NAC code. One of my systems is mixed VHF/UHF conventional and digital. Working just fine now. Again, I appreciate all of your responses!

Hello all,

this is off the main subject but with the last reply replace the case, it reminded me , i need to get a new front case peice for my xt,, i dropped it and cracked case between the function knob and antenna mast its just cosmetic, but i would like to keep it looking nice

i figured if a new front case peice was only 20 or so id do it

i kept my 396t in flawless condtion for he 3 years i had it , not this

does any one know where i may look for the front case peice on the uniden site?

To Joe M.
I don't know that I had 'Simple View' set on FreeScan. I'd downloaded my freqs from my 'T' to FreeScan and since the 'T' didn't have an option for NAC, it didn't show in that field. I found the code when I was looking at RR, copied it and then . . . well, thanks to all of your responses, I have the code in my XT.

Paul,
Thanks for the link, which I have printed. There are other items in the link that I'm sure I will be using. I have the NAC code entered. Maybe I should not have said that I 'need'ed to enter that code, I have all my freqs coded either by CTCSS or DCS, didn't know about NAC until I got the XT. I'm very happy with the XT but I know that I have a lot to learn so I get the most from its abundance of features.

From: SRehm24416@aol.com
Topic: 3887 Message: 3887

Just wanted to say that I spoke to Uniden today and was told that the screws and screw holder parts that I mentioned in a previous e-mail to the group that broke are what they call "physical damage" even though the unit was not abused, dropped, handled roughly etc. I was also told that "this has never happened before on any of our units" so someone at Uniden would have to "decide" if it would fall under warranty.

Under the warranty information section of the online manual it states in part, "free from defects in materials and craftsmanship" and just below listed A thru F there is no mention of "physical damage" as a voided warranty situation.

I guess I will either have to use a rubber band to keep the case together or be at the mercy of Uniden and their decision and send it in for repair.

Thanks for letting me vent.

Jeff

I cant speak for the 396XT, but I have seen plenty of blackberrys, Treos, and a few other devices that have had what you described happen to them.

Sometimes over torqueing the screw into the hole will cause the plastic additional stress and cause the cracking.

I have also seen this happen on devices that have plastic molding, with metal inserts to hold the screw.

I do hope Uniden helps you take care of it, under warranty or not, just to see if perhaps it's a problem with a batch housings, or maybe they were not set to the right torque setting from the factory.

Fhgdel mentioned, maybe a dog knocked it off a table or something. Anything is possible.

I hope you get it resolved.

Subject: [BCD396XT] Help with Wright Pat system not needed anymore

You gotta Love that FreeSCAN software

.. I went back and checked the WPAFB system one more time and I realized my error. It is now receiving them fine.

Thanks
Bill

From: Cris Hanna
Topic: 3898 Message: 3898

So I have a PSR 600 mobile and BCD396 XT handheld

I know that in the P25 systems typically you simply need the control channels and the rest is taken care of

The latest version of PSREdit defaults to just importing the primary and alternate CCs for Trunked systems

I've looked at Freescan and ARC XT PRO

In FreeScan under Import> Radio Reference > Options

Enable Control Channel only mode by default

Only download control channels.

I didn't find a similar option in ARC XT PRO..anyone?

Also in PSREdit, Trunking imports defaults to a Roaming with High and Low setting to allow you to grab the strongest signal in a multisite/simulcast system

I'm not finding any such options in either FreeScan or ARC XT

Thanks in advance to help me over the learning curve

Hello all,
Hope this is not off topic here on this list, if it is please delete it. My question is about using one antenna to hook to 3 different scanners. I have 3 scanners currently hooked up to a Scantenna about 60feet up. I have the coax coming into the house and hooked onto a 3 way splitter (tv type). Was considering a multicopler as discussed in another post but can see putting out that kind of cost at the moment. ($200) I do however have a old UHF/VHF distribution amplifier laying around not doing anything. It has one input and 4 outputs. I hooked all my radios to this earlier and was able to increase signal on my radios as before i was only getting static. I know it is not ideal but it seems to work ok for my situation. Main question is by using this distribution amplifier would it harm any of my radios by using it?
Amplifier is made by Winston Model 1800
Anyone know if there would be any harm in using it as it does seem to help pull in weak signals just don't want to overload the radios and desense them.

Thanks,
Joey

The XT models always use Control Channel Only method. No need for an opton.

Uniden models do not use the same method for scanning multiple sites on a system as PSR models do. With Uniden models, you use either GPS control or SQK assignments to turn on/off the appropriate sites.

You should be fine, but be aware that desense and overload are issues
you will want to keep an eye on.

Well I can tell you when I use the FreeScan software in conjunction with Radio Reference, unless I check those boxes, it downloads all channels for a particular site and uploads those to the radios

Again, still have not located in the ARC XT software, but I also find the ARC XT much more difficult to navigate

And regarding the multisite…that's great if you want to spend the money for the GPS receiver or are not driving (don't want to be pressing buttons while I'm driving.

Freescan supports multiple generations of scanners, including those which had the option. It does not, however, write the option to an "XT" scanner.

Since ARC XT only supports the "XT" generation, you won't find that option in it.

I just purchased a Uniden BCD 396-XT scanner. I am trying to locate someone (locally) to program the aforementioned system into it. My eyesight is terrible and I cannot see to do the job myself. I will be willing to pay a fair price to have this done for me. If you do this kind of work, and are located in the Hamilton county-Chattanooga, Tennessee area please E-mail me at: Yoursantaclaus1@.... Thank you in advance. John

Cris,
By default, XT-PRO imports primary and alternate CCs.
You can change that on the RR Import screen.
Approximately 1/4 of the way down the screen are 3 tabs.
The "Trunk Options" tab will let you change what CCs
are imported.

Greg

I am using a fold over pole that allows me to get the antenna up around 30 feet in the air. It's a homebrew job that works rather well at the moment. I have my Scantenna ST2 attached to it as well a dipole antenna and VHF antenna for 2meters. I have a tower that was given to me but I have not had chance to put it up yet, hopefully this summer I will get a chance to get it up. If you would like a picture of my mast give a shout off the group at my email address and I will be glad to send it to you.

Take care,
Joey

bcd396xt. I have a re-banded 800 trunk system which stopped receiving. I checked for lockouts even reset for no lockouts globally. Still no audio. I setup a custom search for the freq range -- 851 to 854 -- scanner will find control and lock on, press l/o and will find audio channel and continue to scan. freq are the same

question, why can i no longer hear the system i have set up, but can hear in custom search mode? Other systems i have programed still work.
(a conventional,IN SAFE-T, and another MOT).

I even reset radio and reloaded all systems I had saved and, were working. No memory errors on ini, but same results.

What am I doing wrong?

Hello,

Did you enter the Custom Band Plan for 800 MHz Rebanded Systems?

Subject: [BCD396XT] audio output

bcd396xt. I have a re-banded 800 trunk system which stopped receiving. I checked for lockouts even reset for no lockouts globally. Still no audio. I setup a custom search for the freq range -- 851 to 854 -- scanner will find control and lock on, press l/o and will find audio channel and continue to scan. freq are the same

question, why can i no longer hear the system i have set up, but can hear in custom search mode? Other systems i have programed still work.
(a conventional, IN SAFE-T, and another MOT).

I even reset radio and reloaded all systems I had saved and, were working. No memory errors on ini, but same results.

What am I doing wrong?

Provided it's not a P25 system... we don't know.

OK, so not a P25 system. As others have said, you will need to enter the custom bandplan.

3918. RE: [BCD396XT] Re: Using mulitple radios on one antenna

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-04-06 11:58:38 UTC
From: J Harrell
Topic: 3895 Message: 3918

Thanks for replying. The mast itself is buried in the ground about 5feet. The scantenna and 2 meter vhf antenna is grounded directly to the fold over pole. While this may not be the most appropriate way of doing it I should have a ground rod also attached to the pole as well. I was figuring that the mast is 5 feet in the ground which is made up of 2 pieces of angle iron welded together should be enough ground and I always disconnect my antenna feeds where there is a storm.

Thanks,

Joey

3919. Service Search

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-04-06 15:13:53 UTC
From: gabrielddc
Topic: 895 Message: 3919

Anybody know if I can change the frequency range of service
search?
For example, in my country HAM radio UHF is between 430 mhz to 440 mhz and in BCD396xt has a preloaded Service Search between 440 mhz and 450 mhz.
Thanks!

Which leads to the next logical question; Are the service search parameters specific to the country or region where the scanner is sold?

BCD396XT service search parameters are specific to the US market. It is likely that models built for other markets are similarly designed (but I only handle the North American Market models).

Hello,

Whether the BCD396XT is worth the money depends on your specific needs but the XT class scanners are definitely worth the money.

It uses a different (and superior) memory management system that has a bit of a learning curve but software can help with that.

If you go to DMAScanning.com I have a few blog posts there that can familiarize you with DMA scanner issues.

I hope this helps.

Well I'm writing software for the Mac right now using TCL/TK. I'm trying
to iron out some of the bugs right now.

not sure what i did but help please.

I just did the factory reset,
now when trying to load the scanner

freescan says - not enough scanner resources availible
and ARC XT says check connection and ensure scanner is on

thanks

Re ARC saying check connection maybe check comm port settings and ensure that they match up with your pc comm port settings that ARCc is setup to use I.E. Com1, 9600,8,1,n for example.

Hi all

thanks for the replys.

this is what happens when you do a reset after 24hours of no sleep :)

My simple error - i didnt realize the com speed rest as well. so of course niether program could talk to the scanner. Now the speed issue is set to match the computer, things work perfectly.

No, but I'm pretty sure that FreeSCAN will allow you to read the radio, sort the systems and upload them all back to the radio.

All,

396 about to arrive. I live in Independence, MO and we have a 700 trunked system. From what little I have read the docs with the scanner will not be that much help to move me from the old bank concept to the new system DMA arrangement.

I keep looking at various FAQ on the web and am learning bits and pieces. But, still not feeling ready for this unit.

Would appreciate if anyone has suggested reading materials that would be of help to this old newbie. Last upgrade was my 800 trunking bearcat, so I at least and not in the dark ages!

John

thanks in advance!

I think one of the most helpful things might be to download a copy of FreeScan from scannow.org and to look at a datafile that someone else has created to see how things are set up. Obviously, a file that contains the system that you want to program would be best and might be obtainable from someone here or on your state's forum on RadioReference.com.

If you can't obtain such a file for your area, feel free to email me direct and I'll send you one of my files for Milwaukee, WI. While it won't have your systems (unless you're in Milwaukee), you'll still get to see how things are set up.

Whether you actually use FreeScan or other software to program your scanner, the ability to see the data within the program should help with the conceptualization. I personally recommend that new owners use FreeScan because it's free and relatively straightforward to use. I think it's also important to be able to program the scanner manually, but that's easier to learn after you have the basic concepts under control.

Eventually you may find that you want or need features not included in FreeScan and can then try the free trials of ProScan and/or ARC-XT.

I also found the Wiki concept of the manual somewhat intimidating but
fortunately I previously have a
BCD396T. The manual for that model (which is very similar) is a better
primer of the DMA explanation.
Using the links provided by Paul Opitz, find the download the manual for
the BCD396T.
Computer programming of these fine Uniden scanners is almost a necessity as
a visual expansion of systems, sites (for trunking) and groups is almost
self-explanatory when viewed on the monitor screen.

As someone else suggested, start with FreeSCAN. (http://scannow.org/), if
you like it, please donate something to assist the author with development.
I personally prefer the ARC programming products (http://www.butel.nl/) but
they do require purchasing after the trial period is over. There are
several others.

Clark

Above all, don't be discouraged, persistence will certainly help.

Dick (and John),

I think the files he is looking for are on the FreeSCAN site so he can pick those up while he is there getting a copy of FreeSCAN. They should be in the state area on that site (much like the way RR is set up).

3951. New User, Not Stupid, but in over my head, someone help!

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-04-21 20:47:25 UTC
From: Happierwithoutclothes
Topic: 3951 Message: 3951

I had an old analog scanner, which became obsolete. Now I have this one and frankly, I am lost.

I thought that Freescan would be a panacea, but not so. I didn't realize that scanners had become so complicated.

I live in Lapeer, Michigan and hope to find a scanner person that can help me learn.

I just got the usb/serial cable, installed the driver for the cable, then connected the scanner. Tried to test the connection, but it would not connect, I kept getting a com error.

But, I guess I got over anxious but I just can't wait to get my scanner working.

How should I proceed? Can anyone help me? I have the manual, but I learn faster with hands on. I'm a guy, I don't read directions.

Anyone that can help?

Regards,

Max

Make sure the scanner and the serial ports are set to the same speed
Make sure you know the correct com port for the scanner's interface on the computer

I think there is an entry in the FreeSCAN wiki on Radio Reference that goes in to more detail AND there may be more detail here if you do a search for it (don't remember seeing anything real recently).

Tom

Really, it's no different once you:

1. Create a new System.
2. Create a new Group within that System.
3. Create new Channels within that Group.

Once you've done that, you have pretty much the same infrastructure as legacy (banked) scanners. If you want to "add another bank", create another System and repeat steps 2 and 3.

The only thing really new is that you create the infrastructure of the memory. You need not worry about all the options to 'get it running'.

In the case of trunked systems,

1.5. Create a new site within that System.
1.6. Enter frequencies for the site.

First step should be to get the scanner and the computer communicating.
I'd suggest that you look at this info from the RR wiki:

http://wiki.radioreference.com/index.php/Freescan_-_Connecting_Scanner_to_PC

BTW, you may be a guy and that probably won't change, but reading the directions (and a bunch of other stuff as well) is required if you expect to enjoy the scanner. It's too complex to just fake it unless you're already a scanner whiz.

You might want to try the Butel software on a trial basis. That software has a feature that automatically detects your comm port and tests the connection.
Best regards,
Ted

From: n0evh
Topic: 3943 Message: 3959

To the many replies,

Wow, a great yahoo group. I got the 396 in the brown truck about 3 hours after my first post. I had a flood of good info come in from you all and I read all the posts and your recommendations as fast I as could.

I loaded freescan and loaded Independence 700 system into the scanner. With that little bit of success I continued to read all your posts.

Later in the evening my head began to hurt, smile. So just enjoyed the scanner and relaxed.

Next day I looked at some files you all sent showing me examples of various counties etc and how to do groups. Starting to make sense compared to the old bearcat with channels only.

Today I tried ID tracker III to begin to see which freqs are active and so on.

Wow, you all have taken me a long ways in just a matter of a few days. I am really enjoying the scanner and need to now get a good charger and some more batts as I am using them faster than they can charge! That is a good thing.

Along with all this info I have met a few locals that are really into scanning and I am sure I will continue to learn from them also.

Thanks so much, hopefully I can return the favor to someone in the future.

John from Independence Missouri (proud 396XT owner and user)

All,

Few years back I could always find some interesting action on the 151 freqs of the Conservation department in Missouri. I travel around the NW part of the state.

Have had my new scanner watching those freqs for a few days and no joy at all.

Has the department moved somewhere else?

John

What system is "local police" for you?
What do you mean you can't access it? What quick key did you assign to it?
What does the scanner do when you press that key while scanning?
What software are you using?
What error messages did you get, or what is the error condition?

Did you assign it a System Quick Key (SQK)? If so, is it enabled?

Are any assigned Group Quick Keys (GQKs) enabled?

Are the System, Groups, and Channels not locked out?

(in order of descending likelihood)

No. They still use them all. I think there is about 10 or so frqs with repeater inputs. They probably use cell phones more now than before but I know they still use the 151 channels they always have. Put them all in and be patient. I am sure you'll hear something eventually.

Welcome aboard. It seems like there are a lot of people buying these new scanners.
They are great scanners but if you are not used to them, depending on your previous experience, they can be hard to program and learn how to use them.
Just like learning about computers. Don't try to learn it all at once.
Plus there are a lot of guys that just won't read the manual. They no longer come with printed manuals. You have to go online and read it.
The best place to start is at www.radioreference.com on the wiki boards for the scanner.

Hi Tom!

Welcome to the Group! You made a great choice. The XT is a fine scanner, arguably the best out there at this time. Be ready for a bit of a learning curve, but it will be well worth the time and effort. While you are waiting, you might check out the various software programming packages for the XT, as well as the Radio Reference site already mentioned. Using one of these packages will greatly simplify your scanning life! :-)

Scott

Welcome to the group. I've had my scanner just about a week and now know enough to be declared officially "dangerous". Seriously though, this is a feature packed scanner, that for me, was pretty complicated. I've chatted online with a member who really set me straight and gave me some very good advice.

First, it's easier to get started if you download a couple of free programs.

Freescan http://scannow.org/

Radio Reference http://www.radioreference.com/

I.D. Tracker
http://personalpages.bellsouth.net/k/d/kd5eis/IDTracker/IDTracker.htm

Radio Reference allows you to find the frequencies of the systems in your area by zip code.

Freescan makes it very simple to copy those frequencies to your scanner and upload them in to your scanner.

I.D. Tracker II lets you see the "hits" and logs them for you to research further to customize what you like to listen to.

The scanner can be programmed with the buttons but good luck figuring it out. I've got a technician class ham license and I am embarrassed to say that I uploaded about 3000 channels from all over the country, didn't hear anything for about a week until Any_of_1 from this group showed me the above software.

Also, you'll need serial to USB cable, unless your computer is very old and has a serial port. Don't buy one at Radio Shack! I paid $38.95 and found on just this week at Office Depot for $11.95. Oh well, live and learn, but no reason you have to learn like I did.

The Freescan makes it easy to back up the frequencies that you get from Radio Reference, along with your scanner settings. If you remember to back up to your hard drive, you can have more fun experimenting with your scanner. With a backup, you never have to worry about messing your scanner setting up, since it's a snap to restore them.

I hope you have fun and if it's ok, I'll send you a buddy list request so we can learn together through Yahoo Chat. So look for my Yahoo screen name and don't block me.

Regards,

Max

Lockout: With display stopped on the channel you wish to lock out, press L/O once for "temporary" (locked out until scanner is turned off, then turned on again), or quickly press twice for "permanent" (locked out until you press "Menu", then press down top knob to enter "Program System." Scroll with top knob in either direction until you find the system in which the locked channel is located. Press down top knob once.

If channel is conventional, scroll to "Edit Sys Option." Press down top knob. Scroll to "Set Lockout." Press down top knob. Scroll to desired function. Press down top knob. Press "Scan."

If channel is trunked, scroll to "Edit Site." Press down top knob. Scroll to relevant channel. Press down top knob. Scroll to "Set Lockout." Press down top knob. Scroll to desired function. Press down top knob. Press "Scan."

The "E yes" key can be pressed instead of the top knob.

Printed manual exceeds 1000 pages.

If your printed manual exceeds 1000 pages, you must have the super-giant print edition. The original 996T paper manual is only 147 pages.

I'm well aware this site pertains to the 396XT, however the 996T was one of the last models to include a paper manual, therefore it was stated for comparison. In addition, if you look at the PDF file you sited, it is meant to cover the 4 XT models and has extraneous info that would not need to be printed out for a 396XT. Ideally, one would sift through and print out the pages necessary for the operation of their model.

From: Paul Opitz
Topic: 3981 Message: 3982

1. Which USB cable?
2. What COM port is the cable being assigned to?
3. Did you set FreeScan to use that COM port?

Scanner COM setting is under "Settings" menu. It is enabled by defaut, so you'd have to have disabled it for it to be the issue.

I've paid a lot more than that for things
and have not gotten a paper manual.

On the other hand, I also have a ton of manuals
I do not, and likely will not ever, use.

To add insult to injury, when I need a manual anymore,
I usually Google it rather than try to find the hard copy.

It's not like you are without the possibility of a paper manual - you
just have to print it yourself (or use a service like Kinkos) rather
than get it pre-printed (most of which will only serve to fill landfills
faster). Let the people who want paper buy the paper.

I would not be surprised if there are government
incentives for companies that are 'going green', too.

But, this has all been said before (just not all at once).

I'll bet it also has to do with the fact that the 396xt can be changed via software and the paper manual would be outdated.

3989. RE: [BCD396XT] Have scanner (manual)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-02 11:53:51 UTC
From: Clayton
Topic: 3972 Message: 3989

It would be nice if they had a nice paper manual like they used to have available for a reasonable price for those who want it. However, I'm sure there are enough costs involved in laying a manual out and printing it, that it may not be that reasonable. I have always read through the manual that came with every previous model that had a paper manual and kept it around for a while for reference, then put it back in the box. For the XT's, I browsed the online manual, printed off a few pages that covered the new stuff and kept those with me for a while. Times change, sometimes we just have to change with them.

My 2 cents

Clayton

I did get the "Freescan" program to use with Radio Reference Database, the 15 bucks it costs to have access to the frequency database is well worth it. Besides some of the features I had to learn, I'm pretty much back where I was with my old BCXT100 and RS Pro-95, I'll have to admit not a pleasure to program and I have a long way to go understanding features. Thank you for thr warm welcome.

Lock them out (F+L/O, L/O when it is on one of the searches).

Or, if you programmed using software, don't enable them in the software.

3995. RE: [BCD396XT] Have scanner (manual)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-02 16:52:09 UTC
From: Eric Noah Hart
Topic: 3972 Message: 3995

Personally, I have an iPod touch, and one of the new iPads. I like having the manual in PDF format as I can use it literally anywhere that I am when I don't know something, or have forgotten how to use a specific function. I will go out of the way when I get something new, to find the manual in PDF format so that I can keep it with me. As for the size of the BCD396XT manual, printed out it would actually be 273 pages, or 137 double sided pages (at least the manual that I have which I am using "BCD396XT, The Complete Reference", dated May 14, 2009).

Eric

To: BCD396XT@yahoogroups.com
Subject: RE: [BCD396XT] Have scanner (manual)

It would be nice if they had a nice paper manual like they used to have available for a reasonable price for those who want it. However, I'm sure there are enough costs involved in laying a manual out and printing it, that it may not be that reasonable. I have always read through the manual that came with every previous model that had a paper manual and kept it around for a while for reference, then put it back in the box. For the XT's, I browsed the online manual, printed off a few pages that covered the new stuff and kept those with me for a while. Times change, sometimes we just have to change with them.

My 2 cents

Clayton

Subject: Re: [BCD396XT] Have scanner

I've paid a lot more than that for things
and have not gotten a paper manual.

On the other hand, I also have a ton of manuals
I do not, and likely will not ever, use.

To add insult to injury, when I need a manual anymore,
I usually Google it rather than try to find the hard copy.

It's not like you are without the possibility of a paper manual - you
just have to print it yourself (or use a service like Kinkos) rather
than get it pre-printed (most of which will only serve to fill landfills
faster). Let the people who want paper buy the paper.

I would not be surprised if there are government
incentives for companies that are 'going green', too.

But, this has all been said before (just not all at once).

From: Richard Victor
Topic: 3972 Message: 3996

The BCD396XT - The Complete Reference is 273 pages, but it's a different document than the users' guides. The Uniden Scanner Users Guides are downloadable at:

http://info.uniden.com/twiki/bin/view/UnidenMan4/SiteExport

Unfortunately, I'm not getting a good download of the pdf at this time. Don't know if it's a site problem or on my end.

My previously downloaded copy of the Users Guides is 1059 pages. Both documents are useful, but quite different in content and presentation.

1. Which USB cable?
2. What COM port is the cable being assigned to?
3. Did you set FreeScan to use that COM port?

Scanner COM setting is under "Settings" menu. It is enabled by defaut, so you'd have to have disabled it for it to be the issue.

I can not get my scanner or computer to connect. I have download the drivers as well as freescan etc.
Is there something I have to set on the 396xt to be able upload/download etc?

I am using the USB cable.

Thanka!

Everything is going to be "manualess" soon. GRE doesn't have a manual for their scanners either and to be honest it makes sense with the newer scanners as they can litteraly change things overnight and update the PDF as quick. Personally I'd rather the money spent on putting a manual together and printed be used for R&D and new system types and features. And with a lot of the newer cell phones the PDF is a click or two away and I can read it anywhere.

I'm well aware this site pertains to the 396XT, however the 996T was one of
the last models to include a paper manual, therefore it was stated for
comparison. In addition, if you look at the PDF file you sited, it is meant
to cover the 4 XT models and has extraneous info that would not need to be
printed out for a 396XT. Ideally, one would sift through and print out the
pages necessary for the operation of their model.

People say you have to be crazy to program the 396XT by hand, well, im a lunatic because i have done just that with 50 Systems programmed...Its great fun and after awhile its gets real easy...Im retired and what a good way to have spent the winter months...I have my home city in three different "systems" designed differently so when certain things happen using the "hold on system" is a great feature...In my opinion this is one of the best scanners i have owned in 40 years of scanning....I owned a 246xt and 396t previous so the programming came easy ...I did print the early manual which was on the FCC approved site of this scanner and it was only about 110 pages...Also going to www.marksscanners.com was a big help being the other early models were similiar....

IMO, As more current electronics feature flashable firmware, it makes only sense to have a online pdf manual to implement the latest's revisions and features that are added in the firmware.

I think that the downloadable pdf may be more easily printed. In
general, htmls don't print particularly well.

Be aware of changing any Freescan default settings or you may get stuck with redundant and annoying frequencies, frequency groups! for example Custom 1 -10!

Problem is I have 85 Channel Groups that I don't know where they came from? Does Freescan/Rr dump them on the download? I? know It comes with pre-loads but I'm not so sure that accounts for the 85 channels that I don't know where they came from.WTF!

FreeScan is really a "what you see is what you get" situation. If the data isn't there when you arrange it in the program, it isn't going to upload to the scanner. You do need to pay attention to the choices that are presented as to whether you want to erase everything before doing the upload to the scanner or to merely add to what is already in the scanner without erasing what's already there. If you make changes and upload without erasing, you could end up with duplicate groups in that way.

It isn't, however, going to create groups on its own. So the likely answer is that they got there because you put them there or were there as part of the scanner's default configuration.

4011. 396XT Issues

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-03 14:24:42 UTC
From: rjhill3@cs.com
Topic: 4011 Message: 4011

Hi all,

Well, I purchased the 396XT. Although it's fine radio. There are complaints. The 396T was able to be plugged into a speaker and just worked fine. The 396XT, probably because of impedence to protect earphone wearers just shuts down when you plug it into a speaker. Yes, I can get a powered speaker and I may have to, but I wish it just worked like the 396T did. I see on the Radio Reference Site there are complaints about this too. I don't know why Uniden would think that people wouldn't want to use it like we used the 396T. Maybe there is something I am missing, so if there is clue me in. The 396T sounded nice in the car with a speaker and the volume was just fine

Secondly, almost every channel on the 33 Mhz came up as a birdie, has that happened to to others? I see there is an IF Exchange, for the life of me I can't find it in the manual. Has anyone used it, how do use it, where do I find it in the manual.

I'll keep the radio, but between the lack of a printed manual, the speaker issue, and the birdies and the fact Uniden promised the software UASD (yes, I use ProScan and Free Scan, but they promised the software) and essentially bailed on us, I'm not exceedingly inpressed.

Paul is there any hope we can get the speaker issue fixed?

Thanks,

Ray

Uniden won't pay for repair if the item is damaged due to intentional or accidental damage. For example you smack the scroll knob bending the Variable resistor pot and shaft and crack the
plastic knob. The person is responsible for the repair costs. The Scroll knob stops working and has no damage then Uniden pays.

There must be a lot of "other" interference out there. I too get nearly the entire 33MHz area as static. Inside, outside, in car, not in car, etc. Kinda sucks when you want to try and search for skip sometimes. You just sit there and hit L/O.

Checking my desk unit, there is one possible birdie in that general frequency area: 31.05

Birdie check is to remove the antenna and do a 5 kHz step search. I checked from 29-39 MHz.

(I cannot rule out 31.05 being real reception as I did not go to the shield room for this test.)

There must be a lot of "other" interference out there. I too get nearly the entire 33MHz area as static. Inside, outside, in car, not in car, etc. Kinda sucks when you want to try and search for skip sometimes. You just sit there and hit L/O.

i all,
Well, I purchased the 396XT. Although it's fine radio. There are complaints. The
96T was able to be plugged into a speaker and just worked fine. The 396XT,
robably because of impedence to protect earphone wearers just shuts down when
ou plug it into a speaker. Yes, I can get a powered speaker and I may have to,
ut I wish it just worked like the 396T did. I see on the Radio Reference Site
here are complaints about this too. I don't know why Uniden would think that
eople wouldn't want to use it like we used the 396T. Maybe there is something I
m missing, so if there is clue me in. The 396T sounded nice in the car with a
peaker and the volume was just fine
Secondly, almost every channel on the 33 Mhz came up as a birdie, has that
appened to to others? I see there is an IF Exchange, for the life of me I can't
ind it in the manual. Has anyone used it, how do use it, where do I find it in
he manual.

I'll keep the radio, but between the lack of a printed manual, the speaker ssue, and the birdies and the fact Uniden promised the software UASD (yes, I se ProScan and Free Scan, but they promised the software) and essentially ailed on us, I'm not exceedingly inpressed.
Paul is there any hope we can get the speaker issue fixed?
Thanks,
Ray

It is possible you have a 'bad' 396XT that is putting out a lot of noise.

Uniden won't pay for repair if the item is damaged due to intentional or accidental damage. For example you smack the scroll knob bending the Variable resistor pot and shaft and crack the
plastic knob. The person is responsible for the repair costs. The Scroll knob stops working and has no damage then Uniden pays.

I did put them there Richard from Service Search tab in Set Scanner Options Dropdown Search keys 1-3. There remains 85 other Groups some unwanted and they must be pre-loads because I'm pretty sure I didn't load them in. I'm wondering, pay for what you get, if Scancat Gold for Windows or ARCXT Pro is the worthy investment and if I can easily edit all these unwanted channels frequencies out. I feel it would be well worth fine tuning the radio excluding unwanted groups and frequencies.Do you favor any software program for this? Which one do you use if you don't mind me asking?

From: Paul Opitz
Topic: 4002 Message: 4030

If that drop down does the same thing as the similar option in the scanner itself, it has nothing to do with the Custom or Service searches being unlocked/locked. That just assigns what function those service quick start keys will have.

Without some description of "85 other groups" I can't even begin to guess as to what they are or how they came to be.

Subject: [BCD396XT] Re: Custom 10 resolved

I did put them there Richard from Service Search tab in Set Scanner Options Dropdown Search keys 1-3. There remains 85 other Groups some unwanted and they must be pre-loads because I'm pretty sure I didn't load them in. I'm wondering, pay for what you get, if Scancat Gold for Windows or ARCXT Pro is the worthy investment and if I can easily edit all these unwanted channels frequencies out. I feel it would be well worth fine tuning the radio excluding unwanted groups and frequencies. Do you favor any software program for this? Which one do you use if you don't mind me asking?

I checked my 396 from 25mhz to 50mhz with the squelch on 5 and it's dead quite. I even installed a CB antenna on the unit.

Now I think my unit is broken,.

To: BCD396XT@yahoogroups.com
Subject: Re: [BCD396XT] 396XT Issues

Checking my desk unit, there is one possible birdie in that general frequency area: 31.05

Birdie check is to remove the antenna and do a 5 kHz step search. I checked from 29-39 MHz.

(I cannot rule out 31.05 being real reception as I did not go to the shield room for this test.)

There must be a lot of "other" interference out there. I too get nearly the entire 33MHz area as static. Inside, outside, in car, not in car, etc. Kinda sucks when you want to try and search for skip sometimes. You just sit there and hit L/O.

ubject: [BCD396XT] 396XT Issues

i all,
Well, I purchased the 396XT. Although it's fine radio. There are complaints. The
96T was able to be plugged into a speaker and just worked fine. The 396XT,

robably because of impedence to protect earphone wearers just shuts down when ou plug it into a speaker. Yes, I can get a powered speaker and I may have to, ut I wish it just worked like the 396T did. I see on the Radio Reference Site here are complaints about this too. I don't know why Uniden would think that eople wouldn't want to use it like we used the 396T. Maybe there is something I m missing, so if there is clue me in. The 396T sounded nice in the car with a peaker and the volume was just fine
Secondly, almost every channel on the 33 Mhz came up as a birdie, has that appened to to others? I see there is an IF Exchange, for the life of me I can't ind it in the manual. Has anyone used it, how do use it, where do I find it in he manual.
I'll keep the radio, but between the lack of a printed manual, the speaker ssue, and the birdies and the fact Uniden promised the software UASD (yes, I se ProScan and Free Scan, but they promised the software) and essentially ailed on us, I'm not exceedingly inpressed.
Paul is there any hope we can get the speaker issue fixed?
Thanks,
Ray

I've heard nothing good about Scancat. I prefer FreeScan and ProScan to
ARC-XT although others will rank them different. FreeScan, ProScan or
ARC-XT are all capable of easily removing things that you don't want on
your scanner, except, of course, for those things that cannot be changed
such as the service searches. It's just a matter of removing those
things from your database and then telling the program to erase
previously loaded systems before uploading to the scanner

John,
The scanner is brand new. The encoder glitches while scrolling up or down the menu. When turning the encoder in one direction the menu would interminently scroll up and down instead of keeping in one direction.

Some people can deal with this issue, but it drive me nuts.

The encoder is made by TOCOS and is very common in many handheld radios of today. The TOCOS part number is TP70N00AE20.

Well if it is new and under warranty send it to Uniden for repair. Shouldn't cost anything except shipping if its a faulty part. You paid for the warranty and may as well use it, plus it could save you down the road if it needs service you will be out of luck since you "opened" it and performed an unauthorized repair.

Hi List,

Q: 1. How does one setup a bandscope search/freq. range? I am at a lost on this one.

Q: 2. I would like to to keep a freq., in memory. Problem: freq. locks up, after squelch shuts down, and is "still on" and will not "auto scan". Any fix?

Thanks for any help in advance.

Greg

I'll pass on explaining Q.1., but Q.2. can be resolved by the negative delay time feature which allows the scanner to stop on the channel for the length of time set and then to move on regardless of whether the signal continues or not.

Hello,

First, make a Group or use an existing Group to enter a Channel. Program or enter UID (iXXXXX) where you enter TG, then enter the Alias or Alpha Tag. The Display will alternate between the UID Alias and TG Alpha Tag.

Thanks Dave. I played around a bit with an exsisting system I have. I entered the UID as a TGID and then alpha tagged it. It does work. It does alternate between the two. A bit of work but cool. Now, as long as they don't go changing radios on me I won't have to go back and do this some more.

So far I have figured out that my city's police department uses one id for the car, one for the main portable radio (one man car) and anything goes for the other portable radio (if two man car). The system is such that an officer could use his/her portable radio the whole shift, and if it is not assigned to that car I would be out of luck. So basically I have a one in three chance of getting it right in the programming mode of the uid's. But I'll keep trying.

Hello,

When aliasing UIDs, I try to name the department, not the individual. Departments have call signs so I use the call sign to confirm the department. If aliasing by individual, that's a lot of name changing.

Just tag the 2nd radio as "spare-1", "spare-2", or whatever name you wish for those "floating units that may ride in different cars. I tag Pensacola, FL PD like that, even on FD, Public Works, etc... there is always "floaters" that hop from unit to unit in all of the departments, here at least the radios actually stay with the same person, so I can tell who they are, in a small town like P'Cola, FL, you learn the voices and each one's personal slang or catch phrase fairly quick. I even use some of the nicknames of the Sanitation guys I happen to have overheard, lol.

Hope that may help sort it out a bit more,
Walter

4054. RE: [BCD396XT] UID Programming

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-11 14:37:25 UTC
From: Patrick - Used 2-Way
Topic: 4045 Message: 4054

There shouldn't be any duplicate ID's on the system. Every single radio on the system will have an individual ID.

What most departments do is block IDs together. Actually this is not necessarily a Dept thing but more of a radio shop programming thing.

Also keep in mind if a radio is not assigned to an individual, it will be rotated through out the dept. Sure it might be kept in a certain division, but it makes marking the ID difficult.

When I worked for a 2-way shop we gave FD's a block of ID's, PD had a block of ID's, Public Works has their own block of ID's.

This helped us find unauthorized users who would try to use a random ID. If we saw an ID that didn't match our Blocking scheme, we had an easier time blocking the ID when we checked the master Logs.

It also showed us if FD radios affiliated with PD talk groups and stuff like that.

4055. Selling my BCD396XT with many extras, as new

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-16 11:22:00 UTC
From: x2000n
Topic: 4055 Message: 4055

Hello all,

I have purchased recently a BCD396XT unit, hoping that I will have time to use it. But with two babies in our home - the time I have for it is close to zero.

So I offer it here for sale first, before posting it on Ebay.

This is the complete package:

BCD396XT - with all original accessories

Hard leather case

6 adapters (connector saver, SMA to BNC etc.)

5 handheld antennas (various frequency bands and sizes, telescopic, stubby,rubber ducky etc. includes SRH805S stealth antenna)

4 mobile antennas (for car use): wide band, 800 Mhz etc.

All this is in pristine, unused condition.

I would like to get $600 for the complete lot + shipping if I have to ship it. (my cost was over $900 for all the included items!)

Payment via paypal or cash.

I live in Oakville and work in Mississauga if you would like to see / pick up.

Please email me at x2000nNOSPAMyahoo.com (replace NOSPAM with @)

Thank you for reading...

Regards,

Miklos Tomka

4056. Missing broadcasts

Yahoo group: BCD396XT (2008 — 2010)

From: Tom
Topic: 4056 Message: 4056

I programmed 3 counties: conventional, agencies and trunk sys. and it seems that I'm not getting everything on scan mode. I tagged both site and talkgroup under 1 quickkey number, 92(qk's)<--same as tags? altogether and I deleted pre-existing ones on upload. I can't figure out if I've reach max talkgroups. Am I getting some of these groups lockedout? Also I edited out duplicates. Am I missing something? Anyone know? I'm playing hit or miss on some of this programming. I'm using ARC-XT>I put 3 software choices in hat and picked that one! Also, I was thinking of upgrading antenna to an 800mhz one.

4057. Re: [BCD396XT] Missing broadcasts

Yahoo group: BCD396XT (2008 — 2010)

Topic: 4056 Message: 4057

It's not clear to me what you mean by

"I tagged both site and talkgroup under 1 quickkey number, 92(qk's)<--same as tags?"

Trunked sites and conventional systems have System/Site/Service Quick Keys. Talkgroups individually have no quick keys at all. The groups that they are contained in have Group Quick Keys.

It is unlikely that you've reached the maximum number of talkgroups unless the trunked system has more than 500, which is the maximum.

You might want to take a look at the following for an explanation of the structure of the data in your scanner.

http://wiki.radioreference.com/index.php?title=Systems%2C_Sites_and_Groups&printable=yes
<http://wiki.radioreference.com/index.php?title=Systems%2C_Sites_and_Groups&printable=yes>

You mention the possibility of upgrading your antenna. Obviously, an inadequate antenna could be why you aren't getting what you expect to hear. On the other hand, you could have the best antenna and location and you wouldn't hear anything if your programming isn't right. From what you've stated, I'm inclined to think that you have a programming problem. I'd suggest that you get in the car with your radio and drive to a location where you can't possible not be in range of the system and see what you hear. If you aren't hearing it there, your initial problem is programming. Once you've got that resolved, you can determine whether you need a better antenna to hear from your normal location.

Dick

4058. Somewhat confused (again! Hahaa)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-18 02:38:58 UTC
From: shelleysh1@att.net
Topic: 4058 Message: 4058

Some advice please. I'm programming in some cities and counties in several of our counties in adjoining Illinois (we're in Missouri). They're StarCom21. I understand and use the best method for programming trunked systems is the method that Paul has setup for us to follow on the Wiki:
SYSTEM 4
.....SITE 1
..........FREQUENCY 1
..........FREQUENCY 2
..........FREQUENCY 3
.....SITE 2
..........FREQUENCY 4
..........FREQUENCY 5
..........FREQUENCY 6
.....GROUP 1
..........TALKGROUP ID 1
..........TALKGROUP ID 2
..........TALKGROUP ID 3
.....GROUP 2
..........TALKGROUP ID 4
..........TALKGROUP ID 5
SYSTEM 5, etc.

But I have a problem and maybe I'm just getting old and dense... For example - St. Clair County, Illinois has many cities and agencies which reside in their StarCom "location". Am I going to run out of room before I get all of them entered? I know there are some maximums but right now I have too many "numbers" spinning around in my head to remember what my maximums are. I have 4 heavily populated counties which all have a significant number of StarCom sites, frequencies and talkgroups. I just want to make sure, before I spend a tremendous amount of time juggling through this, to make sure I do it right. (None of the talkgroups are setup with the sites - one has to go through them and figure out talkgroup what goes with what site!)

Any and all advice will be greatly appreciated! Thanks ahead of time!

Shelley

P.S. When I go to Radio Reference, ask for St. Clair Co, IL trunked, I get a whole lot more than St. Clair County - I think I get most, if not all of Illinois.

I guess when I assigned quick keys 3-92 I thought the talkgroups were tagged as quickkey number too;trunked on left and talkgroup to the right.I was confused as to QK assignment for a group and Number tag for system or channel.Also, I just realized I was restricted as to how many groups I could upload on the ARC demo.Let me read more on the proper way to program and organize groups.

While number tags can be useful, they aren't crucial and I'd suggest
that you forget about them until you've got System/Site/Service Quick
Keys and Group Quick Keys under control.

I don't understand the "trunked on left and talkgroup to the right."
Trunked is a description of the type of system and talkgroups are the
individual channels which are contained in one or more groups in each
system.

I generally recommend that newcomers use FreeScan because I feel that
it's easier to use than the others and it's free. If you need
additional features, then you can consider the others later. My
personal choice is FreeScan and ProScan, using each for the things that
I feel it's best at. I also own ARC-XT, but find it less useful.
Others prefer it, of course.

An additional advantage of FreeScan is that its popularity makes it easy
to exchange datafiles with others either so that they can look at what
you've done and provide assistance or so that you can get files for your
area from someone who has already programmed for that area.

I live in the Chicago area, i have programmed about ten towers for Starcom that are within 25 miles of my location for every day use...You can also go to www.carmachicago.com and pick out those towers and match up most TG's close to you....If you have the scanner in "Search" in the "Site" it will give you most used TGs also in your area....In my 396XT i kept pre-programmed Starcom and rebanded all the 800 freqys so in SQK-28 i more or less have most of the state using Starcom....

Radio Reference Web Service: In Radio reference when selecting State, County from dropdown, and Trunk Systems button, then Agency dropdown menu. It gives you two windows, on left Sites: menu and on the right side, Talkgroups. I tried to import a screenshot but I'm not sure how in reply message here.

Also, I forgot to delete my old systems on my scanner! I tried the mobile test you suggested and only got a few broadcasts, I think my antenna positioning has something to do with that and programming was definitly an issue.I re-programmed after deleting all channels and I seem to get more broadcasts! Thank you for your continued support!

OK, now I know what you are referring to. On the left are the sites
that make up the system. You should choose the one or more that you
want. Once they've been downloaded to the software, you need to assign
each of them a System/Site/Service Quick Key. You can assign more than
one site to a particular SQK if you desire. In fact a trunked site and
a conventional system can share the same SQK if you want to do it that way.

On the right are the talkgroups. They are divided into groups. Within
each group the talkgroups are the numbers after the "ID:". You should
choose those that you want and then assign a Group Quick Key for each
group. That will control all of the IDs in that group.

What state, counties and systems are you trying to program? I'll try to
put together a sample file to get you started. Are you using ARC-XT or
FreeScan?

Thanks dataman! That's pretty much how I finally decided last night I was going to have to end up doing it. I just would have preferred a more "organized" initial setup *grin*. I'll also go by the Carma site - an amazing plethora of information and great group of people! I've known some of them for more years than I'd like to admit. Hahaa
Thanks again, I'll set up the 4 adjoining Illinois counties with search and pickup the talkgroups that way. Appreciate your help!

Shelley

Hello all,

A few months ago I created a blog about Uniden DMA Scanners. Since then I have posted a few things of special interest to folks getting started. Today I posted a blog that addresses one of the features I really like about using Uniden scanners on a daily basis.

I hope you'll check it out and maybe let me know what you think about the concept of a DMA scanner blog.

The blog is at dmascanning.com

Thanks,
Don, KE4JD

P.S. I am not selling anything!

I have both FreeScan and ARCXT with 180 day Radio Reference subscription. However, I was kind of misled because I thought I was getting lifetime updates with radio reference whereas its just lifetime updates for the ARCXT program. i'm oldschool fan of Police Call from Radio Shack.Thank you again!

4067. BCD396XT with extras - $540

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-20 01:34:45 UTC
From: x2000n
Topic: 4067 Message: 4067

Hello all,

a number of people contacted me, telling that $600 is too much for what I want to sell. So I reduced the price please tell me if this is more appropriate!

- BCD396XT - with all original accessories

- Carry case with screen protector (textile)

- 6 adapters (connector saver, SMA to BNC etc.)

- 5 handheld antennas (various frequency bands and sizes, telescopic, stubby, rubber ducky etc. includes SRH805S stealth antenna)

- 4 mobile antennas (for car use): wide band, 800 Mhz etc.

All this in pristine, unused condition.

I would like to get $540 for the complete lot + shipping if I have to ship it. (my cost was over $900 for all the included items!)

Payment via paypal or cash.

I live in Oakville and work in Mississauga if you would like to see / pick up.

Please email me at x2000n@...

Thank you for reading...

Regards,

Miklos Tomka

Press the menu button, then select Program System (the first item on the
list).

Create a new System, then enter the parameters of that system, then edit
the Groups and create a new Group and set those options, then create
some new channels and set those options (frequency, tone, name, etc).

I'd suggest a premium membership in RadioReference.com. You can then use ARC-XT to directly download to ARC-XT the data for the systems that you want to program. Assign each conventional system and each trunked site a System/Site/Service Quick Key and each group a Group Quick Key. Make any other changes that you desire to the data.

If your computer has a serial port, be sure to enter the number of the port that you're using into ARC-XT. If you have no serial port, you'll need either a serial to USB adapter or the Uniden USB-1 cable which contains an adapter. With either the adapter or the USB-1 be sure to install the driver before connecting the cable to your computer. Once you've installed the driver and connect the adapter or USB-1, your computer will assign a com port number to that device. You should be able to find it in Windows Device Manager. Enter that number into ARC-XT.

You can now transfer the data to your scanner.

Be sure to save the data so that you can reload it or modify and reload it as you desire in the future.

Dick

4072. RE: [BCD396T]

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-05-20 22:40:14 UTC
From: DMAScanning.com
Topic: 4072 Message: 4072

Hi Joe. Will do.

Ahhhh! Now That's More Like It

I am kind of a scanner junkie. Most days I have two radios on me with surveillance type ear pieces going to each ear and the little plastic tubes poking out from the back of my neck. (And yes that does get strange looks from strangers and no I did not wear those around the Secret Service when I saw George W. Busch at the NRB convention a few years ago.) For years now my two radios have been a Uniden DMA scanner (first a BCD396T now a BCD396XT) and an amateur radio handy talkie (HT). I carried a Kenwood TH-F6A for many years (actually I wore out the charging jack on one and had to get a second one) and recently I bought a Yaesu FT-60r. These are great radios but both of them had the same problem. The designers never intended for you to scan with the radios while they are hanging on your belt.

The problem exhibits itself most profoundly when you get in and out of a vehicle which I do all day a couple of days a week. If it is winter time the situation is even worse! For example if you wear an amateur HT on your belt you absolutely have to disable transmit because it is just too easy to transmit and not know it (at least until your side warms up). So why is it that after you disable transmit, the radio has to stop the scan to tell you that you did? Then there is Key Lockout. That would be a wonderful feature if the PTT didn't stop the scan.

So for years I have had reach down at my side and manipulate buttons while driving--sometimes restoring the scanning but just as often not.

Today, however was different. I have been watching the Uniden site for months waiting for a nylon case to be available for purchase. My current BCD396XT has one but I decided that when I could get another one I would start carrying my BC346XT. Last week the case became available and I pounced on it. It arrived yesterday and I took the 346XT with me today. I loaded an exact copy of my 396XT into the 346XTvia FreeScan (sans digital of course). I then put it in Key Safe mode and away I went.

It was such a pleasure to jump (ok maybe I should say crawl or slide) in and out of my truck and not hear a single beep signaling that I had just knocked the radio out of scan. I'll hang on to my Yaesu HT and will even carry it with me from time to time but the double Uniden scanner compliment is here to stay.

Program a conventional system with 1 or more groups, and then put the channels into the groups as appropriate. You can set them to digital only and then add the NAC if you have that information (or search for it if you don't). I looked up Littleton and see that they are using a NAC of 293 on FG3 and 296 on FG5.

Set it like you said - to Conventional. Then, you can leave the audio
set to ALL (the default) or change it to DIGITAL ONLY if P25 is the only
thing used on the frequency.

You should note that you will not hear this type of setup far - maybe
1/2 miles or so from the transmitter for mobiles and portables.

4080. ProScan Version 4.4.4 Is Out

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-05 01:28:20 UTC
From: bob_proscan
Topic: 4080 Message: 4080

The latest and greatest ProScan is out.

The Export / Print feature is enhanced to show all the systems (to channels) parameters. Check it out as I couldn't be more pleased with the looks.

The much requested changing the site and system (single site scanners) type selection box is in this release.

Version 4.4.4
==========
Added - Database - DMA scanners - Export / Print database systems now includes all parameters.
Added - Database - DMA scanners - Selection box for changing the site and system (single site scanners) types.
Added - Database - DMA scanners - Export the database to CSV (comma delimited) files.
Added - Startup detects Control Channel data on and turns off.
Changed - Database - DMA scanners - HTML Report renamed Export / Print.
Changed - Logging - Date now shows Month/Day/Year or Day/Month/Year depending on the computer regional settings.
Fixed - Program may crash if the option "Minimize To The Notification Area" is set.
Fixed - Scanner Over IP - Number Tag and Jump not working remotely.
Many - Many small bug fixes and improvements.
ProScan supports the BCD996XT, BCD396XT, BCT15X, BC346XT, BCD996T, BCD396T, BCT15, BR330T, BC796D, BC785D, BC780XLT, BC296D, and BC250D scanners.

ProScan contains the most features of any Computer Aided Scanning ever made. I stand by my words and product.

ProScan - Taking Computer Aided Scanning To The Next Level!

The Larsen NMO150/450/800 covers VHF, UHF and 800 MHz and you can buy it
with a mag mount or for installation.

It will do a good job on your vehicle and also works well indoors if you
put it on a metal base such as a cookie sheet, pizza pan, file cabinet, etc.

I second the recommendtion for the NMO 150/450/800. It's the best multi-band mobile antenna I've found. I'm using one of these on a ground plane set-up for a base antenna and it works great on all three bands as well.

John,

Here's one that you should try, if for no other reason than you'll be amazed at what 15 bucks will do for you.

Go to www.dcace.com In the little SEARCH box, type "tri band rare earth". This will produce two search results for basically the same mag mount antenna, the only difference being that one of the versions terminates in an SMA connector (for direct connection to your XT) and the other terminates in a BNC connector (which requires a BNC-SMA adapter to connect to your XT).

The antenna wire itself is much thinner than what we are used to, and the magnet itself is only about 1" in diameter, yet it holds to a trunk lid very well (works well at 80 mph on I-294, for example). It is configured for 2 meters (150 MHz fire band), 70 cm (450 / 470 UHF bands), and 900 MHz (works fine on 700 and 800, too).

Here's the issue with this antenna: the cable attached to it is very thin RG-62 (which is more like 20 gauge wire), much thinner than the RG-58 coax cable that we are used to on antennas. The good news is that this thin wire will bend easily to conform to the weather seal around a trunk lid or car door. The bad news is that the wire is flimsy and only 12 feet long. Most antenna mounts come with 17 feet or more. 12 feet is too short to make it from the trunk to the front seat if you route the wire around the interior body moldings. And the wire is too flimsy to leave exposed where it can get torn up - this I know from experience.

So, my suggestion would be this: If you want to use the antenna in a mobile situation where the 12 foot cable will be sufficient, then get the SMA version which will screw directly onto your scanner.

If you are going to mount on the trunk lid and want to hide (protect) the wire along the route from the trunk to the front seat, then get yourself a 15' (or whatever you need - use a piece of string to measure the route) RG-58 extension cable. Use the cable on the antenna just to get inside the trunk - leaving plenty of slack so that the cable doesn't get destroyed the first time you open the trunk!! Then run your sturdier extension from the trunk to your scanner. You can get a custom-made extension cable with an SMA male on one end and SMA female on the other end from Pacific Custom Cable. Go to www.pacificcable.com/SMA-Cables.html . You can use their custom cable tool on that page to configure the extension cable you want (with SMA, BNC, mini-UHF, F, N, or TNC connectors!).

I learned about this antenna from one of the CARMA founders, and its performance was impressive - after you deal with the short / flimsy cable issue.

I can 2nd that one. I believe that's what I have in my truck for my BCD996T.

Before that I was hooked to my BC780XLT..

On both scanners I was very happy with the performance of the antenna.

The Larsen NMO150/450/800 covers VHF, UHF and 800 MHz and you can buy it with a mag mount or for installation.

It will do a good job on your vehicle and also works well indoors if you put it on a metal base such as a cookie sheet, pizza pan, file cabinet, etc.

It looks to me like RG-62 is .242" diameter. The coax is more likely RG-174 which is .100" diameter. Twelve feet of RG-174 will lose about 3.5 dB at 800 MHz. If you add another 15 feet of RG-58 you'll lose about another 2.1 dB for a total of 5.6 dB. Not to mention the issues that might be presented by changing the length of the coax that feeds the antenna.

With all due respect, by the time that one buys the antenna and the extension cable one has spent nearly as much as it would take to buy an antenna that's built properly in the first place.

While I haven't tried that specific antenna, I do have a couple of the "rare earth magnet" antennas. They're handy when you need to get your scanner antenna outside of the vehicle to avoid the loss of signal caused by the body of the vehicle, but beyond that, I haven't been too impressed with them. The Larsen has been far better than the ones that I have.

YMMV.

I've used the Larsen 150/450 NMO antennas for years and they are some of
the best performing antennas. I've never tried the tri-band antenna, but
it very likely is exactly what you are looking for.

Joe,
Yes, your Larson and the multi-band are, without question, the best performing out there. I've also used/recommended both for well over 10+ years. The multi-band, NMO lip mount, has been the one I've personally used mobile for the last eight or nine years. Have absolutely no complaints, haven't found a better one and certainly tried quite a few!

Shelley

I have not used the Larsen but may give it a try

ScannerMaster carries the Austin Sprectra. It's expensive at 99.00 but I've been very impressed.

http://www.scannermaster.com/Austin_Spectra_Mobile_Antenna_p/04-540720.htm

Unfortunately the antenna I have on vehicle in addition to the Austin Spectra, which is knocking it out of the park on all bands, is not made any more. It is the Antenna Specialist MON 52 Lo band, High, UHF, 800 Mhz

I'm also planning to try this one in the near future http://www.universal-radio.com/catalog/scanants/1171.html make sure you check the link for the gain chart.

It appears that the Spectra is twice as long as the Larsen, so it could
be worth a try if the OP can handle that much length. Could be a bit of
a problem in parking ramps, garages, etc.

It appears that the Spectra is twice as long as the Larsen, so it could
be worth a try if the OP can handle that much length. Could be a bit of
a problem in parking ramps, garages, etc.

4093. Re: [BCD396XT] Looking for a good mag mount Antenna for my 396xt

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-07 20:50:59 UTC
From: Mark Levine, D.C.
Topic: 4081 Message: 4093

I have my Spectra mounted on an NMO trunk mount on the front passenger's side of the hood/cowl on my SUV. Works well.

The longest I could put on a roof mount would be a 19" whip and even at that, I would want it spring loaded. I also like the Antennex 150/450/800 center loaded antenna, unfortunately - no spring.

I got mine at Amateur Electronic Supply in Milwaukee, but I'm sure that
there are a number of other dealers as well.

4095. Arc-xt in Windows 7 seems to lock-up but . . .

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-09 14:09:54 UTC
From: tim01862
Topic: 4095 Message: 4095

I just received my new BCD396XT a couple weeks ago and am starting to learn how to use it. My problem is:

I have a new laptop with windows 7 installed and hence no native com ports. I bought the Uniden USB-1 converter cable but when I try to read alot of data from the scanner like all of the default systems it runs for a number of seconds then the screen stops updating and looks like nothing is happening. Being an IT guy I check the system processes and something that looks like the arc software is still using 25% of the processor. So I walk away and come back but it never stops goes to the finished screen.

I tested it with freescan and it goes through fine, I've also tried separate usb ports and a generic usb-comport converter and they all do the same thing, so I'm thinking it has to be the software. I have used Arc software in the past so I prefer to get it working. Was wondering if anyone else has seen the same thing or if it's a known issue. I tried writing to Butel but got no response.

Thanks,
Tim

Do you happen to have on C-CH Output for reading trunked channel decoded
data with Trunk88 or Unitrunker? If you do turn it off when programming
the radio.

Menu > Settings > C-CH Output > Off

I dunno. It takes quite some time to SEARCH the MilAir band. While
you're SEARCHing, you will miss a lot of other things.

I would just enter known frequencies and use SEARCH on another scanner,
if you have one, to find new frequencies.

Searching the whole military air band takes forever so that my be out of the question. Find a good link(s) for military freqs and start there. I have some air to air refueling freqs that are interesting when they are active. Also, major airports simulcast ??? UHF freqs along with the regular VHF ones for any and all military units that may use the airport.

A friend of mine sent me this link today,

http://mt-milcom.blogspot.com/2010/06/revolution-in-scanning-is-coming.html

so i wonder if there is going to be NO uasd support for the xt?

also does this mean that in 3 yrs the xt will be a brick?

i hope not i really like this radio

Why would you assume your current radio would be a brick when a new one comes out? I still use my PRO-92. Every radio has its benefits. Heck, my parents still have a 30+ year old MacDonnel (sp?) crystal scanner running in the basement.

That said, this radio seems to be designed around knowing frequencies and talkgroups that exist. We all know that this information is constantly changing. I, for one, enjoy finding the unidentified stuff.

I image this type of radio would be ideal for the new-to-the-hobby user. It takes a lot of the learning curve way.
I supposed we'll have to see more details when Paul decides to enlighten us.

i dont know, why i assumed that , your right i had my 4ch crystal radio shack scanner for a longt time after i got hte bc245

i guess im just a little gun shy since the 396xt came out so close to the 396t

i like my xt dont get me wrong but according to your logic it wil be good for years to come thie new tech is aimed at a different segment of purchasers

Just my 2 cents worth before this becomes a (possible) free-for-all...

Uniden never has and never will intentionally bring a product to market which would render any of their other scanners a so-called "brick"! Not only is that counterproductive, it's also something they'd never do to their existing customer base. That said, technology itself is something they cannot change. (New ways to broadcast radio signals which our radios cannot yet receive properly for example.) But in this instance, technology is what's going to make the upcoming new radio absolutely fantastic, whether you're a seasoned user or a novice. And it will do nothing to endanger the existing radios which we program to received the systems currently in use right now! And Uniden is not going to abandon the huge customer base which owns the 396XTs and 996XTs (and "T"s). I have little doubt there will still be firmware updates, etc - in particular for the XTs. There are tons of people using these radios!

So, please don't go crazy on speculation! Just wait for Upman or someone else from Uniden to give us all the official details and specs the radio. It's NOT being released to do any kind of damage to our radios - it's being released because the technology is now here for Uniden to do so! And, if you want to program your own radio yourself, then that's kewl - you have your 396XT and/or your 996XT which will do just that. But for those don't wish to go through the process of programming in what they want, apparently the new radio will take the questions and frustrations away - it will be able to automatically program the radio for you by using zip codes and GPS.

That, my friends is a brilliant move by Uniden! They'll sell SO MANY of these radios because there really ARE a lot of people out there who do not want to program their own radios. Even with software they're confused enough at times to become frustrated and then upset. So yes - Uniden is likely making one of the very smartest moves they've ever made with their scanners. Don't criticize them for it - appreciate it for the brilliant move it is!

Shelley
(My opinion, of course)

Read up on what this product is and does.

I don't think it's a replacement for the XT series. In fact, it's not a replacement for anything - it's a new format scanner designed for anyone to operate. IOW, it's what I call an "Entry level digital scanner" while the XT series is a high tier unit designed for the experienced user.

The BR-330, despite it's lackluster popularity, was not a replacement for the BC246T. It was a scanner marketed to the NASCAR crowd to try to draw them into the scanning world. And the 330 had some outstanding features over the (then) current models - such as MilAir and shortwave. It really was one of the 'best kept secrets' in scanners.

The Home Patrol is the first basic digital scanner made by anyone. How many threads have we all seen about how to perform this function or that function, or reprogram due to rebanding, or program a P25 system, Etc. This model looks like it should end nearly all of those threads.

Granted, there are some new features on it that no other scanner has - such as built-in recording and a touchscreen display, but I see that as continuation of the progression of scanners that has been going on for decades. The BC246T, an analog-only scanner was the first to use DMA memory. That was lightyears ahead of the BC296D, but the technology progressed to the BCD396T which replaced the 296D.

The 246T did not make the 296D obsolete and I seriously doubt the Home Patrol will make the XT series obsolete. There will always be a market for higher end scanners designed for experienced users.

****
BTW, I'm CC'ing this to the HomePtrol list where I request that the majority of the discussion continue with respect to the HomePatrol model. It should also help spur some discussion on the HP list. :-)

4117. RE: [BCD396XT] Re: WOW does this mean

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-27 16:55:14 UTC
From: Patrick - Used 2-Way
Topic: 4110 Message: 4117

Hey Joe, thanks for the heads up on the new group for the HomePatrol. I just joined.

I was there at the open house and got to play with the new device.

From an RF stand point it doesn't do anything new.

It will still do what the 996T and other similar devices will do.

This device is intended to be easier to operate so the average person can get into, or back into the scanning hobby.

You can use GPS, zip code or city name to find the appropriate info.

They are incorporating all of the RadioReference.com information into the scanner to assist with programming.

For us hard core scanners, the benefits are touch screen, quicker simpler programming on the go, and capability to record stuff on a moments notice. It even has a buffer set up so if your not recording and want to catch what was just missed, you can still go back, I think 10-15 seconds and hear what was just said.

The receiver on it sounded pretty good and I was told by a beta tester that its comparable to other devices on the market.

I am looking forward to picking up one my self when they hit the market in October.

I think what the "Home Patrol" will do is push more and more law enforcement agencies toward encrypting their signals. One advantage of the 396T/XT was that it had a steep learning curve. It was a product for the enthusiast, not the criminal. The "Home Patrol" - if as easy as it is being described - is more of a type of unit your everyday thug might keep nearby. Not a good thing for the scanner enthusiast, IMO.

can you connect an external antenna do the device? Cannot really tell from the photos. Has anyone seen the software that goes with it? I am wondering what you can or cannot do with it.

Oh give encryption a break! You people who whine about encryption are getting old. Encryption can be stopped, when a new system is announced make sure YOU are involved and make your points valid that encryption is only to hide from the taxpayers. Truth is only 1% of crimes are committed by someone using a scanner. First off 99% of the criminals aren't smart enough to try and use a scanner, those that are don't usually have the know-how to program it, and in the case of the HomePatrol the criminals won't spend $500 or more, that would cut into their profits too much and the few left over wouldn't know what they are hearing anyway....their too stoned.
The HomePatrol will not add to departments using encryption.... stupidity and lack of ACTION will.

Encryption. Great way for the public safety agency to hide behind a curtain of secrecy.

Joe Public has a right to listen in on any and all public safety comms. No I am not referring to DEA or Fed stuff. Just the day to day Police and Fire operations in their neighbor hoods.

I think encryption on those channels should be illegal. Afteral, the citizen pays taxes and the police and fire come from that. Any sensitive info can be sent via MDT or Blackberry or cell phone.

I hope more people get scanners, and then complain to their local reps that the government is being to secretive.

I am lucky I live in an area where most PD/FD don't encrypt their comms.

Now I will say that I will agree with some stuff being encrypted. So don't get me wrong. If they want to do a drug sting, or prostitution sting, or something else along those lines (homeland security related) then yeah encrypt away, but why does a fire dept need to encrypt a working fire call? Or major accident?

Why do day to day police operations need to be encrypted?

I think what the "Home Patrol" will do is push more and more law enforcement agencies toward encrypting their signals. One advantage of the 396T/XT was that it had a steep learning curve. It was a product for the enthusiast, not the criminal. The "Home Patrol" - if as easy as it is being described - is more of a type of unit your everyday thug might keep nearby. Not a good thing for the scanner enthusiast, IMO.

It means there will be a need for scanners like the BCD396XT to generate all the frequency and trunked data that this new "scanner for dummies" will need. I assume it will be heavily dependent on the RR database. Any channel not in the DB will be missed, which is a lot in many cases!

Hi Eric. I understand your concern and agree that is a valid concern to some law enforcement agencies, but not where I live. For years our law enforcement agencies (Police, Sheriff, fire, 1st responders, etc, are dispatched from the same communication center) have had an excellent relationship with scanner owners. If our police are looking for someone it is very common for our communication center to get several calls from scanner owners advising where the person can be found. These scanner owners are very involved and very supportive of our public safety people.

Prior to going digital it was estimated that there were over 1,000 scanners in the city/county with a population of around 100,000. After going digital that number is down to less than 250. Depending on the price of the Home-Patrol we may see a resurgence of scanners among the population.

Our law enforcement agencies have the ability to encrypt messages as necessary. Also they have computers in every car, fire truck and ambulance where sensitive information can be exchanged. Public access to normal public-safety communications traffic has been a big benefit to our community.

I would view this as a scanner for people who unable or unwilling to
learn how to use a decent scanner. There doesn't appear to be any way
to actually enter updates so it will be dependent on whatever database
that it uses. I can see it being very popular with criminals.

As i said before and i will say again the only agents that should be encrypted is the feds special ops channels ie swat and any channels that are used to pass patient information the the hospital yes they still do that they do it here in houston tx and montgomery county tx otherwise it should be open as far as the XT being a brick i own a 330t still and the xt's came out these scanners will be around for a long time to use rather it be analog or digital the homepatrol is just an easier to program scanner for the people that are new to this or not electronically inclined
again just my opinion
Thanks

Aaron Siller

I am lucky I live in an area where most PD/FD don't encrypt their comms.

Now I will say that I will agree with some stuff being encrypted. So don't

get me wrong. If they want to do a drug sting, or prostitution sting, or something else along those lines (homeland security related) then yeah encrypt away, but why does a fire dept need to encrypt a working fire call? Or major accident?

Why do day to day police operations need to be encrypted?

I think what the "Home Patrol" will do is push more and more law enforcement agencies toward encrypting their signals. One advantage of the 396T/XT was that it had a steep learning curve. It was a product for the enthusiast, not the criminal. The "Home Patrol" - if as easy as it is being described - is more of a type of unit your everyday thug might keep nearby. Not a good thing for the scanner enthusiast, IMO.

Oh give encryption a break! You people who whine about encryption are getting old. Encryption can be stopped, when a new system is announced make sure YOU are involved and make your points valid that encryption is only to hide from the taxpayers. Truth is only 1% of crimes are committed by someone

using a scanner. First off 99% of the criminals aren't smart enough to try and use a scanner, those that are don't usually have the know-how to program

it, and in the case of the HomePatrol the criminals won't spend $500 or more, that would cut into their profits too much and the few left over wouldn't know what they are hearing anyway....their too stoned.
The HomePatrol will not add to departments using encryption.... stupidity and lack of ACTION will.

...they're...

So, two out of three roadblocks are suddenly removed. And I'm not sure many would agree with your third point.

> The HomePatrol will not add to departments using encryption.... stupidity

The other side of the same coin is that it will get more *voters*
involved and may help keep encryption from happening.

Most police agencies recognize the value of having many eyes and ears on
what they do. The ones that don't, well, they have reasons for wanting
to be 'in the dark'.

Not saying you're wrong, but you certainly won't be right in all cases.

I agree, and it's the same in my area. [Not the "same communications center" stuff.] But I know a captain on the local sheriff's department. He has always maintained that "the average crook couldn't operate the digital scanners needed to monitor our stuff" when I ask him about encryption plans. The new "Home Patrol" may change his opinion.

[...sarcastic mode: ON]

Riiight....

[...sarcastic mode: OFF]

Whether to encrypt or not is a matter decided by a small committee. By the time the public (or the less than 1% of the public) knows, it's a done deal.

If they can pay for the scanner, they can pay for someone to program it
for them. I agree with John that these people are too greedy to spend
money on a scanner. (or, they have to pay their sources and have only
enough left over for food and maybe their stash).

Besides, most busts should be coordinated/pre-planned off the air, and
implemented with little to no on-air messages that give any info away.
So, scanners won't help with properly planned busts.

And more scanners means more of a chance someone
with one will be on one of those committees. :-)

In truth, the decision is usually made by the salesperson
who convinces the purchasers they *need* encryption.
The reasons can range from the legit to the bizarre.
Of course, the commission increase has nothing to do with this. ;->

Dispatched responses are very helpful. When an officer says he is 2 minutes away from the scene, the crooks know how long they have to 'till it's time to go. Additionally, I get a chuckle when an officer says that a certain store's alarm is a very low priority, since it is "chronic." Don't think somebody would easily use that to their advantage? Yeah, I know they *shouldn't* be saying that stuff on the radio, but they do.

If you're even jokingly suggesting that the decision to encrypt an existing clear P-25 transmission is somehow related to a sales person, then jokingly explain to me how he/she might garner a commission increase as the result?

4140. Re: [BCD396XT] Re: WOW does this mean

"2 minutes away" is said all the time. How would the crooks know what location he is responding to? Also, for busts the team should be assembled at the station, or a meeting location, then come together.

And as for "shouldn't", that's why I said "proper" on those terms. :-)

One county near me just went to MDT for dispatch. Nice to know that even the other units in the same municipality won't know who is responding to what. How THAT'S paranoia when you keep your fellow officers in the dark. But, maybe one of them is 'on the take' and might tip off the criminals, so I suppose it's necessary. The last part of that is sarcasm, of course, but the first two lines are completely true.

You know, another side of the issue is this: When the criminals hear all the busts that don't make the media, they might think again about being in such a business. All in all, for each negative there is a positive, and I don't think the HP will change much - other than the number of scannists - AKA eyes and ears out there. That's ALWAYS a good thing. Well, until they decide to take action on their own. But, it's usually a good thing.

One last story: A car hit a kid a few weeks ago (5 year old kid ran out in front of it). Some people were so upset they started beating on the driver, so the driver got back in his car. The people then called back and said he was trying to flea the scene. Yea - I would too if I were being assaulted by several people and I had no weapons.

Encryption = higher cost = higher bill = higher commission for the salesperson. From what I've seen, few are on straight salary.

Or, for an existing system, it means getting a commission (sale) vs not getting one, but usually the decision to encrypt happens at the initial sale.

Yes and no - the issue of encryption applies to the ability to receive
on the 396XT as well.

But, your point is well taken.

This scanner seems like a Uniden version of the Radio Shack's Pro-107
(made by GRE) only more advanced. And it doesn't look like a oversized
iPod either. And they both use RR's database.

Here is the same, although the dispatchers have a habit of saying "a caller from scannerland" which shows a bit of disrespect to us.
If it weren't for my scanners going 24/7 I'd have never heard a bank robbery in a county South of me 2 years ago. A week later driving down a highway near my home I saw a guy who matched the suspect. Called the Sheriffs Dept and 5 minutes later they and two other departments had the guy surrounded at gunpoint. In his backpack they found the gun he used in the robbery and he was off the streets, and will be for many years to come :)
I have also called in things and had to call back when dispatchers gave out incorrect information, once corrected they got their suspects.
The locals do very little over their laptops but on occasion they send calls out on them when it's sensative stuff, no encryption though.....and it will stay that way. In Indy there is some encryption, mostly Vice, Drug ops and some investigation channels but most is in the clear, partly because of oversight by a civilian board who does listen on scanners! Also because of the huge cost $3000 per radio for keys and it's just not a need.

Yes, it uses the same SMA type adapter that the current 396T have. The HomePatrol uses the same antenna with a right angle hinged adapter. Its not just stuck in the up position, you can move it to different angles..

Sheeesh, more eyes and ears doesn't equate to more encryption, taxpayers raising hell about spending $3,000 per radio to encrypt them will put a stop to the encryption though, especialy with schools laying off teachers, dropping classes and sports, and in one area they shut the schools down because they couldn't bus students, no money for fuel, no money for encryption!

crackheads could care less about scanners, all the care about is getting high and they won't spend $500+ on a scanner, and if they did they never figure out how to use it.....

Yup, only the dope comes before food.....
And Joe is right that most busts are preplanned, many times right down to a floor plan of the property. That takes time, so does getting warrants etc. By the time they hear on the scanner that something is going down it's too late. Same with felony warrants, they are almost always preplanned.

Encryption = higher cost = higher bill = higher commission for the salesperson. From what I've seen, few are on straight salary.

Or, for an existing system, it means getting a commission (sale) vs not getting one, but usually the decision to encrypt happens at the initial sale.

Subject: Re: [BCD396XT] Re: WOW does this mean

Here is the same, although the dispatchers have a habit of saying "a caller from scannerland" which shows a bit of disrespect to us.
If it weren't for my scanners going 24/7 I'd have never heard a bank robbery in a county South of me 2 years ago. A week later driving down a highway near my home I saw a guy who matched the suspect. Called the Sheriffs Dept and 5 minutes later they and two other departments had the guy surrounded at gunpoint. In his backpack they found the gun he used in the robbery and he was off the streets, and will be for many years to come :)
I have also called in things and had to call back when dispatchers gave out incorrect information, once corrected they got their suspects.
The locals do very little over their laptops but on occasion they send calls out on them when it's sensative stuff, no encryption though.....and it will stay that way. In Indy there is some encryption, mostly Vice, Drug ops and some investigation channels but most is in the clear, partly because of oversight by a civilian board who does listen on scanners! Also because of the huge cost $3000 per radio for keys and it's just not a need.

Joe and I live near each other. I know that's how it happened here in Summit County, OH. Akron was sold years ago on VSELP, and then again on the new county system (digital non-P25). The powers that be we sold on the fact that the system couldn't be monitored by any scanners.

Two problems. The VSELP system was outdated even when it was installed. I already owned a 250D and was able to monitor the PD on the day they switched to digital. It was quite comical to listen the the 14 cops I live by loving the new system, then let them listen to my radio.

"No radio can monitor it. It changes frequencies all the time." "We're encrypted. You can't hear us."

No. Your trunked and digital. Wanna listen?

Perhaps you missed it, so I'll quote myself in response to
the gentleman's comment about getting off into left field:

MCH wrote:
> But, your point is well taken.

I also suggested at the beginning of the thread that
the HP topics should be discussed on the HP group.

But, I don't think we need groups specifically for encryption, DMA
programming, online control, programming cables, and every other
sub-aspect of scanners. Again, encryption affects the 396XT as well.
But, I had not posted a word on the topic since the quoted text above.
As I said, his point was well taken.

the city i live in (gladstone mo) went around all of this encryption stuff

they just got MDT sometimes here

you hear NOTHINGe on calls except thend

"235 10-8 enroute to one with one 10-15 from the MDT call"

that goes all around encryption just use MDTS

Why do you or others even concern themselves with UASD? Freescan works fine, BCTool is being improved and there are a few other programs that you can pay for (why I don't know) that will program the radio.

That said even if tomorrow Uniden announced a UASD new program or said that they are no longer supporting it in any way after July 1 how would that make a radio a brick?

BTW they produce new vehicles ie: cars and trucks every year with some new features does that make your year old car obsolete?

This is really getting off topic, but I've got to tell this...

First of all, I DO run a regional public safety trunked radio system for a living. Several years ago, I went out to watch the fireworks show on opening night of the county fair. I don't care at all about the fair, so several of us were in a business park across the street from the fairgrounds waiting for the fireworks. The local PD had very recently cut over to our trunked system. I point out that I do NOT work for the city that the fairgrounds are in, and am completely unknown to any of the cops in that city. I was listening to them on my city issued XTS-5000 portable. They were using a talkgroup that is full time encrypted. There was cop at the intersection near where we were and after a while he came over to see what we were doing. I told him that we were there to watch the fireworks and he was happy with that. About that time there was some radio traffic on the talkgroup. He got a really strange look on his face and the exchange went something like this:

Cop: They told us that this talkgroup was encrypted and no one could monitor us.

Me: It is encrypted and no one can listen. <I said this as I pull the XTS-5000 off my belt (the same radio he was using)>

<That got him really perplexed. He did quickly figure that I might be SOMEBODY>

Cop: Who are you?

Me: <As I pull out my city ID> I run the Glendale Radio Shop and you are on our radio system. I'm the guy who generated your encryption key.

Cop: Uh, OK. You must know Frank <the head of his city's radio shop>

Me: Yep, talk to him all the time. Tell him Jim says hello next time you talk to him...

Cop: Yea, well you guys enjoy the show <and he walked back to the intersection>

I listen to my scanner to hear the criminal actions of the LVMPD.

Now police has been dispatched regarding a complaint about a Mariachi Band playing music, and further describes the "suspects" heights, descriptions and completions and the "weapons" the suspects are carrying.

There is a GOOD REASON why Metro wants to switch over to "OPENSKY"

lol, My now (longtime) ex got stopped one night by the department I was dispatching for. She had a scanner in the car so when I responded to the officer I told him to go encrypted. Back then it was speech inversion. He switches over and I told him if had to write her up go for it. He responds "what, for all 5 stop signs?". I said "well. no, one will do". Then I asked him to ask her where she was. She wouldn't tell him. The next morning I get home and she starts complaining the scanner in the car isn't working right on my work channel. That day I took it out, it never did go back in, I'm just glad she never flipped that switch on the front of the scanner because she would have heard our conversation..... that stop sign cost her $85 too, I didn't pay it!

Encryption = higher cost = higher bill = higher commission for the
salesperson. From what I've seen, few are on straight salary.

Or, for an existing system, it means getting a commission (sale) vs not
getting one, but usually the decision to encrypt happens at the initial
sale.

It is. I was just saying it's supposed to be easy program also. It
does have the 700 mhz band on it though. Why I don't know since it
won't do digital.

Where are you folks getting a $3k cost for encryption? ADP on digital systems is relatively cheap. DES-XL etc. costs more but nothing costs $3k for just encryption.

Several chiefs have sent out notices about people listening on scanners. People feel a need to post things in progress a very bad move. If a chief tells his bosses aka city council, commission etc. that he feels he needs encryption do you think that people in that position are going to argue with him?

Joe and I live near each other. I know that's how it happened here in Summit County, OH. Akron was sold years ago on VSELP, and then again on the new county system (digital non-P25). The powers that be we sold on the fact that the system couldn't be monitored by any scanners.

Two problems. The VSELP system was outdated even when it was installed. I already owned a 250D and was able to monitor the PD on the day they switched to digital. It was quite comical to listen the the 14 cops I live by loving the new system, then let them listen to my radio.

Here is the same, although the dispatchers have a habit of saying "a caller from scannerland" which shows a bit of disrespect to us.
If it weren't for my scanners going 24/7 I'd have never heard a bank robbery in a county South of me 2 years ago. A week later driving down a highway near my home I saw a guy who matched the suspect. Called the Sheriffs Dept and 5 minutes later they and two other departments had the guy surrounded at gunpoint. In his backpack they found the gun he used in the robbery and he was off the streets, and will be for many years to come :)
I have also called in things and had to call back when dispatchers gave out incorrect information, once corrected they got their suspects.
The locals do very little over their laptops but on occasion they send calls out on them when it's sensative stuff, no encryption though.....and it will stay that way. In Indy there is some encryption, mostly Vice, Drug ops and some investigation channels but most is in the clear, partly because of oversight by a civilian board who does listen on scanners! Also because of the huge cost $3000 per radio for keys and it's just not a need.

Warrants are just as important. And crimes in progress require warrants man times too, there is plenty of time to pre-plan a strike.
Ind has a fugative task force for dangerous felons only, thats all they do, the badest of the bad and every single one of their raids is completely preplanned to keep the crooks from knowing whats going on. That included one suspect who had fired shots during a bank robbery 45 minutes earlier. Undercovers watched him while the taskforce got their warrants and made their plans to take him down, everything that went over the radio was in the clear, and the suspect never knew what hit him till the had him in cuffs.

Sure they are IF the pay attention! Police/fire etc can't sneak in millions
in a new radio system without someone knowing, usually a city/county council
and newpapers and tv do report those issues. There is NO EXCUSE for you not
to know about a new radio system!

And how little does the encryption key cost? For the sstem here it's the same as buying another radio, and thats doing all the police radios.... $3,000 Each..... multiply that by 2000 (it's actually more than that though radio wise) or so radios and thats no small chunk of change especially when the schools are laying off teachers and cutting classes out as well as cutting sports. One small school district has let go all of it's paid coaches, they now use volunteer coaches for ALL sports they have left.

Its oversized alright. You wont be carrying this on your hip. The LCD screen is 3.5' alone, plus the spearker and the surrounding plastic.

Its also thicker, uses 4AA batteries.

I do like the desktop holder it will come with, or at least the prototypes had. Its great for desktop and car, but I don't see many people carrying one on their hip.

The state was told $2500 per radio, the city $3,000 (different systems) - see thats what you find out when ou get involved and put a stop to the nonsense.
Just because a chief goes cring to council or whoever doesn't mean they WILL get what the want, especialy today when they are closing schools because they can pay for them, laying off teachers and telling kids their sport was dumped because they don't have the money to support it. At this point most communities couldn't afford $200 per radio to add encryption, no matter how much the chief cries.
The fact is though IF people get off their rearends and fight the chiefs or public safety officer or whoever is pushing for encryption they will win, especially now with such tight budgets. Too many people hear there is going to be a new radio system and then sit back and watch as millions get spent, then cry foul when they can't hear the PD on their scanner. Instead they should have gotten involved and used their voice and vote to get a proper system. Look at the millions wasted on systems that ended up not working at all. Going with completely untested (on a large scale) and trying to make it work cost millions more in NY, money they should have used eleswhere. Even the statewide system in Indiana cost way more than expected, and it had (and still has) some major gaps in coverage. But now they have come close to the limit on users and now they are considering upgrading to IP based P25 so they can add more users. All analog users have been told to upgrade to digital radios and new users are not given an option of having analog. The state can't afford the upgrade to P25 but they have no choice. The state police can't get encryption as it costs too much, doubling the cost of the radios so their conversations are in the clear thanks to a tanked economy and the millions the state isn't collecting in sales taxes every month that they had planned on.

lol, My now (longtime) ex got stopped one night by the department I was dispatching for. She had a scanner in the car so when I responded to the officer I told him to go encrypted. Back then it was speech inversion. He switches over and I told him if had to write her up go for it. He responds "what, for all 5 stop signs?". I said "well. no, one will do". Then I asked him to ask her where she was. She wouldn't tell him. The next morning I get home and she starts complaining the scanner in the car isn't working right on my work channel. That day I took it out, it never did go back in, I'm just glad she never flipped that switch on the front of the scanner because she would have heard our conversation..... that stop sign cost her $85 too, I didn't pay it!

Encryption = higher cost = higher bill = higher commission for the salesperson. From what I've seen, few are on straight salary.

Or, for an existing system, it means getting a commission (sale) vs not getting one, but usually the decision to encrypt happens at the initial sale.

Why not? I carry a battery pack for my flash thats a lot bigger and heavier on a belt clip, from what I have seen it shouldn't be too difficult to get a case made up for it that could go on your belt.

From: MCH
Topic: 4110 Message: 4192

There are devoted fans of every SW package - period.

There are even fans who wish more packages would come out - for example packages that run under Linux or Apple's OS.

I wouldn't even mind one for the iPhone. Of course, interfacing is an issue there - it would have to be BlueTooth medium with a BlurTooth-to-Serial adapter (do those even exist yet?)

Again, let's please move the HP discussion to the HomePatrol Group.

And let's let the encryption thread die off. The cost of adding
encryption will vary depending on the features a given radio currently has.

4194. Scanner History (was Wow...)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-28 14:59:05 UTC
From: MCH
Topic: 4110 Message: 4194

Uhhh... earlier than that they didn't have to modify them - the police used AM Broadcast channels to receive calls. Note, *receive* calls. At the time, the cars could not respond via radio.

Encryption, MDTs, and proprietary digital formats ARE threats to scanning. But, hopefully some people are still considering interoperability a high priority which will trump those issues.

For a long time, I've wanted to see a federal mandate that any PS digital system would have to be P25-compliant. They sorta went that route with the funding that mandated P25, but it has yet to pass.

Business systems are another matter - there is little that can be done about them, as they are not serving the public as a whole.

A typo. I didn't catch it since my email client even thought BlueTooth
was mis-spelled. So, I dismissed the warning about the mis-spell on the
second instance as well.

But thanks for the info on the adapter. Too bad I don't know how to
program in iPhone language. One other obstable is that the iPhone is not
100% Bluetooth compliant. It only support some BT specs, but not all.

Even if an App would save/write files, I could use that. I don't need
extensive editing.

I'll tell you what, if I was just arriving to hear my favorite Mariachi Band, I sure would want to know that information, AND if I saw any of those characters I could add my eyes to the situation (or I could leave to keep my family safe), but I wouldn't have this knowledge or choices with Opensky, then I would be just another innocent bystander in the way.

Subject:RE: [BCD396XT] Re: WOW does this mean

I listen to my scanner to hear the criminal actions of the LVMPD.

Now police has been dispatched regarding a complaint about a Mariachi Band playing music, and further describes the "suspects" heights, descriptions and completions and the "weapons" the suspects are carrying.

There is a GOOD REASON why Metro wants to switch over to "OPENSKY"

I think the Blackberry has the same issues, although it would be neat to be able to use either one with the 396XT for updateing etc. Something to look into though now we know there are adapters out there.

Re: WOW does this mean Posted by: "johnstark" johnstark@... inscan43 Mon Jun 28, 2010 3:53 am (PDT) lol, My now (longtime) ex got stopped one night by the department I was dispatching for. She had a scanner in the car so when I responded to the officer I told him to go encrypted. Back then it was speech inversion. He switches over and I told him if had to write her up go for it. He responds "what, for all 5 stop signs?". I said "well. no, one will do". Then I asked him to ask her where she was. She wouldn't tell him. The next morning I get home and she starts complaining the scanner in the car isn't working right on my work channel. That day I took it out, it never did go back in, I'm just glad she never flipped that switch on the front of the scanner because she would have heard our conversation..... that stop sign cost her $85 too, I didn't pay it! Re: WOW does this mean Posted by: "gcr33" gcr33@... gcr33 Mon Jun 28, 2010 4:48 am (PDT) Where are you folks getting a $3k cost for encryption? ADP on digital systems is relatively cheap. DES-XL etc. costs more but nothing costs $3k for just encryption. Several chiefs have sent out notices about people listening on scanners. People feel a need to post things in progress a very bad move. If a chief tells his bosses aka city council, commission etc. that he feels he needs encryption do you think that people in that position are going to argue with him? If it weren't for my scanners going 24/7 I'd have never heard a bank robbery in a county South of me 2 years

ago. A week later driving down a highway near my home I saw a guy who matched the suspect. Called the Sheriffs Dept and 5 minutes later they and two other departments had the guy surrounded at gunpoint. In his backpack they found the gun he used in the robbery and he was off the streets, and will be for many years to come :) I have also called in things and had to call back when dispatchers gave out incorrect information, once corrected they got their suspects. The locals do very little over their laptops but on occasion they send calls out on them when it's sensative stuff, no encryption though.....and it will stay that way. In Indy there is some encryption, mostly Vice, Drug ops and some investigation channels but most is in the clear, partly because of oversight by a civilian board who does listen on scanners! Also because of the huge cost $3000 per radio for keys and it's just not a need. -----Original Message----- From: "johnstark" < johnstark@...> Sender: BCD396XT@yahoogroups.com Date: Sun, 27 Jun 2010 14:48:22 To: < BCD396XT@yahoogroups.com> Reply-To: BCD396XT@yahoogroups.com Subject: Re: [BCD396XT] Re: WOW does this mean Here is the same, although the dispatchers have a habit of saying "a caller from scannerland" which shows a bit of disrespect to us. If it weren't for my scanners going 24/7 I'd have never heard a bank robbery in a county South of me 2 years ago. A week later driving down a highway near my home I saw a guy who matched the suspect. Called the Sheriffs Dept and 5 minutes later they and two other departments had the guy surrounded at gunpoint. In his backpack they found the gun he used in the robbery and he was off the streets, and will be for many years to come :) I have also called in things and had to call back when dispatchers gave out incorrect information, once corrected they got their suspects. The locals do very little over their laptops but on occasion they send calls out on them when it's sensative stuff, no encryption though.....and it will stay that way. In Indy there is some encryption, mostly Vice, Drug ops and some investigation channels but most is in the clear, partly because of oversight by a civilian board who does listen on scanners! Also because of the huge cost $3000 per radio for keys and it's just not a need. WOW does this mean Posted by: "johnstark" johnstark@... inscan43 Mon Jun 28, 2010 5:26 am (PDT) Warrants are just as important. And crimes in progress require warrants man times too, there is plenty of time to pre-plan a strike. Ind has a fugative task force for dangerous felons only, thats all they do, the badest of the bad and every single one of their raids is completely preplanned to keep the crooks from knowing whats going on. That included one suspect who had fired shots during a bank robbery 45 minutes earlier. Undercovers watched him while the taskforce got their warrants and made their plans to take him down, everything that went over the radio was in the clear, and the suspect never knew what hit him till the had him in cuffs. Re: WOW does this mean Posted by: "johnstark" johnstark@... inscan43 Mon Jun 28, 2010 5:27 am (PDT) And how little does the encryption key cost? For the sstem here it's the same as buying another radio, and thats doing all the police radios.... $3,000 Each..... multiply that by 2000 (it's actually more than that though radio wise) or so radios and thats no small chunk of change especially when the schools are laying off teachers and cutting classes out as well as cutting sports. One small school district has let go all of it's paid coaches, they now use volunteer coaches for ALL sports they have left. Re: WOW does this mean Posted by: "johnstark" johnstark@... inscan43 Mon Jun 28, 2010 5:39 am (PDT) The state was told $2500 per radio, the city $3,000 (different systems) - see thats what you find out when ou get involved and put a stop to the nonsense. Just because a chief goes cring to council or whoever doesn't mean they WILL get what the want, especialy today when they are closing schools because they can pay for them, laying off teachers and telling kids their sport was dumped because they don't have the money to support it. At this point most communities couldn't afford $200 per radio to add encryption, no matter how much the chief cries. The fact is though IF people get off their rearends and fight the chiefs or public safety officer or whoever is pushing for encryption they will win, especially now with such tight budgets. Too many people hear there is going to be a new radio system and then sit back and watch as millions get spent, then cry foul when they can't hear the PD on their scanner. Instead they should have gotten involved and used their voice and vote to get a proper system. Look at the millions wasted on systems that ended up not working at all. Going with completely untested (on a large scale) and trying to make it work cost millions more in NY, money they should have used eleswhere. Even the statewide system in Indiana cost way more than expected, and it had (and still has) some major gaps in coverage. But now they have come close to the limit on users and now they are considering upgrading to IP based P25 so they can add more users. All analog users have been told to upgrade to digital radios and new users are not given an option of having analog. The state can't afford the upgrade to P25 but they have no choice. The state police can't get encryption as it costs too much, doubling the cost of the radios so their conversations are in the clear thanks to a tanked economy and the millions the state isn't collecting in sales taxes every month that they had planned on. 4201. RE: [BCD396XT] Re: WOW does this mean

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-28 13:39:00 UTC
From: Patrick - Used 2-Way
Topic: 4110 Message: 4201

Is it just me or did that message take a long time to get out?

I replied to that message at 5:51PM Central Time, I received it the next morning at 7:26AM.

I also notice the 2 or 3 other posts I replied to came in shortly after that.

Hey Moderator, If I am being Moderated, I hope by now you know I am a real person and not a Spammer.

Feel free to take me off Moderation.

Thanks

Joe and I live near each other. I know that's how it happened here in Summit County, OH. Akron was sold years ago on VSELP, and then again on the new county system (digital non-P25). The powers that be we sold on the fact that the system couldn't be monitored by any scanners.

Two problems. The VSELP system was outdated even when it was installed. I already owned a 250D and was able to monitor the PD on the day they switched to digital. It was quite comical to listen the the 14 cops I live by loving the new system, then let them listen to my radio.

"No radio can monitor it. It changes frequencies all the time." "We're encrypted. You can't hear us."

No. Your trunked and digital. Wanna listen?

Thats true, my grandfather used to modify ham radios to recieve police and fire calls. At one time he owned a TV and radio repair shop in Denver or Colorado Springs, I forget which now. He bought the first "scanner" when they came out and got mom one too.

well i guess its been cat and mouse GAME for 50 years

my grandfather told me back in the 1950 s people were modifying car radios to listen to the police,,

it hasnt really changed i guess

Again, let's please move the HP discussion to the HomePatrol Group.

And let's let the encryption thread die off. The cost of adding
encryption will vary depending on the features a given radio currently has.

New members are moderated to make sure they are not spammers or
spambots, or what have you.

Usually, after a few posts the moderation is removed.

I'll take care of removing yours as soon as I send this message.

The alternative, BTW, is having a lot of spam on the list, and that
would make things much worse than a posting delay.

4205. Failed (Failing?) Speaker

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-06-28 16:19:06 UTC
From: tedrhayes
Topic: 4205 Message: 4205

The speaker on my BCD396XT has apparently failed or is starting to fail. After over a year with no problems the sound out of speaker has suddenly become distorted - sounds like its over-driven but, but the distortion occurs at volume levels 7-9. When I connect the scanner to an earphone or external amplified speakers the sound is not distorted.

Any suggestions other than sending to Uniden to have the speaker replaced?

Thanks,

Ted

Topic: 4205 Message: 4206

I too am having what I will call minor speaker problems. I had the scanner in for repair at Uniden and when it came back the speaker sounded/sounds a bit distorted. It was not that way when it went in. It is, unfortunatly, tollerable I guess. I don't want to have to be without my 396xt again for three weeks. At this time that is the only reason I am not sending it back.

I repeat (ad nauseam): Not a new system, just going encrypted instead clear
on an existing P25 channel.

Actually the fact that you don't hear med info on the radio in many areas is due to cellphones. The medics use a cellphone to talk to the base hospitals rather than radio because it's more convenient (for several reasons). Most of the time they are talking to the hospital, they are not in the vehicle either so MDT would not work well. Also much slower to type rather than talk and often they can't afford taking the extra time or the patient does not survive. The other part is that medics are allowed to do FAR more in the field without supervision than in the early days as portrayed by Johnny and Roy.

We hear patient vitals all the time here, no names, just first/last initial and last 4 of the SS# if they have it. Same info from the med choppers as well. The system works, but I see them going to mdt's at some point.

Make sure it's not an issue (read: bad connection) in the earphone jack.
Run a plug in and out of it a few times (maybe 10 times).

We hear patient vitals all the time here, no names, just first/last initial
and last 4 of the SS# if they have it. Same info from the med choppers as
well. The system works, but I see them going to mdt's at some point.

ADP encryption is software based and does not require a key loader. Therefore the progamming is free.

One keyloader for a big dept. or multiple agencies is not a big expense.

People who feel a need to say stupid things or give out in progress calls on scanner threads are a big part of the problem.

The guy who felt he must say he told an officer to give his girlfriend a ticket apparently has some issues of his own to deal with.

If he worked for me you could be sure he would be in the office after that and maybe looking for a job.

How could you like what is not there? It seems people are complaining about not having it just because they want to complain.

Use freescan, bctool or buy one of the programs. You could be like some of the posters who feel a compeling need to tell you to program it by hand. What possible difference could it make?

I have 99 quick keys assigned and I am at 23% full. I could use more quickkeys and I program mine with freescan.

Anyone else having an issue with Arc-xt pro using the usb-1 cable with Windows 7 64-bit? I have a new HP laptop, purchased Arc-xt and the USB-1 cable, loaded the lastest driver connected the cable it was detected fine. Then connected the BCD396XT and Arc-xt sees it fine on the right comport.

My problem is in reading the data from the radio Arc-xt will start and then just freezes after say 30 seconds or so, finally it will give a communication error after a long long time. I am trying to read the default data that comes on a new scanner. The same cable and drivers work perfectly with Freescan and it all works fine on my Desktop that has Windows XP for OS.

I've corresponded with Butel.nl but they say I am the first to report this issue.

I know . . . I could just use Freescan or Arc-xt on my desktop upstairs but I bought Arc-xt because I've used it for my other scanners and I want to get it working on the laptop because it's more convenient.

Please help if possible.
Thanks,
Tim

Yeah I checked that even changing the baud rates, knocking them both down to 56k and lower, even altered the buffer stuff to see if it was a speed issue with a new laptop.

Jeff - When you had the bauds mis-match did is actually communicate and then fail sporatically? I believe for me that it never communicated when I purposefully mis-matched the bauds.

Anyone have ARC-XT working with USB-1 cable on a Windows 7 64-bit machine?

Thanks Again,
Tim

I too have had problems with ARC-XT and various serial connections to my BCD396XT on my Windows 7 x64 machines. I've tried it with the USB-1 and several different USB-to-Serial converters. The problem I have is just as you described - changing the BAUD rate really doesn't seem to make any difference. I also have no serial problems when using FreeScan or ProScan.

I have found one USB-to-Serial connector with which I do not have any serial problems. That is the Micro Connectors Dual Serial Adapter. It does not use the Prolific device driver (as used by all the other usb-to-serial adapters and the USB-1).

My suspicion is that there is a very small incompatibility with the Prolific x64 drivers that is revealed by ARC-XT. This leads to a dead-lock state (ARC-XT and the Serial Driver get stuck waiting for each other). That being said - ARC-XT doesn't appear to be very fault tolerant of serial communication errors (as the other software packages appear to be).

I've reported my problems to BUTEL.

Hope this adds to the discussion.

Hi Ted,

Yeah that jives with the response that I got back just this morning from Butel.nl, thanks for making me feel like I'm going crazy and I'm the only one.

"We have traced this problem down to the prolific device driver under win7/64 bit and have reported this to prolific. Hopefully they can fix their faulty driver. "

Problem for me is I have another USB to Serial cable and it unfortunately uses the Prolific chip and driver.
It definately is related to Windows 7 64-bit and the driver from Prolific and I have used older versions, the newest version as well as the Vista versions.

Hopefully Prolific will fix this quickly as I bought the USB-1 cable because it was sanctioned by Uniden and supposed to work. So now I have two usb to serial cables and software that all don't work, weird that Freescan doesn't have the same issue using the exact same driver, as Gommert from Butel puts it it's just supposed to be like reading from an rs-232 port after all.

Thanks Again, Tim

I have the prolific driver working fine in Win 7 Professional 64 Bit on a Dell Desktop PC. I attached the install files (as a zip file) I used if any of you would like it. I have the prolific driver installed and I use both a GRE 500 and the 396XT with it. I am using all Butel Software myself. Use the VISTA_INSTALLER!!!

For the Butel software to work properly under win 7 64 Bit with the prolific drivers I find I have to get the cable plugged in to the USB port and get the beep then start the software.

Hey Jeff,

I guess the zip file was stripped off because I didn't receive it.
I tried the Vista installer from the ScannerMaster website and had the same issue as I reported.

Have you done a large download of the scanner because I can get it to work for a system sometimes but as a test and origionally during setup I was downloading the entire scanner as it comes loaded from the factory I have also uploaded the latest Uniden firmware to the scanner and that went fine.

What version of the Arc-xt software are you using?

Thanks,
Tim

Assign SQK's (System Quick Keys) to the systems and sites. Turn them on to monitor that system. Turn off to not monitor that system.
Assign GQK (GQKs) to the group of TGs. Turn them on or off.

Open the ARCXT user manual to section 1.6, it has a very basic expanation
of System and Group Quick keys.
Also go to the Uniden web site and find the manual for the BCD396T and
download it. The T and XT are very similar except the XT has "Sites" within
a trunk system and it's the Site that needs the SQ key.

I removed the original programming from the scanner then loaded the systems I wanted in.

I use the most recent version of ARC-XT from Butel's site. I will email the ZIP file for the USB-1 Cable directly to you if you wish.

Hey Jeff,

I guess the zip file was stripped off because I didn't receive it.

I tried the Vista installer from the ScannerMaster website and had the same issue as I reported.

Have you done a large download of the scanner because I can get it to work for a system sometimes but as a test and origionally during setup I was downloading the entire scanner as it comes loaded from the factory I have also uploaded the latest Uniden firmware to the scanner and that went fine.

What version of the Arc-xt software are you using?

Thanks,

Tim

Subject: RE: [BCD396XT] Re: Issue with USB-1 and Arc-xt pro Win7 64-bit

I have the prolific driver working fine in Win 7 Professional 64 Bit on a Dell Desktop PC. I attached the install files (as a zip file) I used if any of you would like it. I have the prolific driver installed and I use both a GRE 500 and the 396XT with it. I am using all Butel Software myself. Use the VISTA_INSTALLER!!!

For the Butel software to work properly under win 7 64 Bit with the prolific drivers I find I have to get the cable plugged in to the USB port and get the beep then start the software.

Hi Ted,

Yeah that jives with the response that I got back just this morning from Butel.nl, thanks for making me feel like I'm going crazy and I'm the only one.

"We have traced this problem down to the prolific device driver under win7/64 bit and have reported this to prolific. Hopefully they can fix their faulty driver. "

Problem for me is I have another USB to Serial cable and it unfortunately uses the Prolific chip and driver.

It definately is related to Windows 7 64-bit and the driver from Prolific and I have used older versions, the newest version as well as the Vista versions.

Hopefully Prolific will fix this quickly as I bought the USB-1 cable because it was sanctioned by Uniden and supposed to work. So now I have two usb to serial cables and software that all don't work, weird that Freescan doesn't have the same issue using the exact same driver, as Gommert from Butel puts it it's just supposed to be like reading from an rs-232 port after all.

Thanks Again, Tim

-snip---

I too have had problems with ARC-XT and various serial connections to my BCD396XT on my Windows 7 x64 machines. I've tried it with the USB-1 and several different USB-to-Serial converters. The problem I have is just as you described - changing the BAUD rate really doesn't seem to make any difference. I also have no serial problems when using FreeScan or ProScan.

I have found one USB-to-Serial connector with which I do not have any serial problems. That is the Micro Connectors Dual Serial Adapter. It does not use the Prolific device driver (as used by all the other usb-to-serial adapters and the USB-1).

My suspicion is that there is a very small incompatibility with the Prolific x64 drivers that is revealed by ARC-XT. This leads to a dead-lock state (ARC-XT and the Serial Driver get stuck waiting for each other). That being said - ARC-XT doesn't appear to be very fault tolerant of serial communication errors (as the other software packages appear to be).

I've reported my problems to BUTEL.

Hope this adds to the discussion.

Ted

Why be bothered with the ARC and Butel. Use freescan and no problems

I am not an employee or relative but the price is right, the program works and you don't see these issues every day with usb adapters.

I use a gigaware adapter and it's never an issue.

Hello,

I'm trying to setup my BCD396XT to monitor the digital P25 systems Prosper Public Safety system (http://www.radioreference.com/apps/db/?sid=6527), and Frisco Public Safety (http://www.radioreference.com/apps/db/?sid=6630).

I have programmed both systems using FreeSCAN, but unfortunately, I'm not hearing anything. I understand that both are test systems, but from hearing others on the RR forums discuss activity on these systems, I think I'm missing something. Is there anything special I have to do (such as the band plan settings) to hear these systems?

Thanks!

If properly programmed and receiving well, when you press HOLD on either system it should show that system's SysID-SiteID.

If it doesn't show, then you aren't getting a good receive of the control channel. As long as these are programmed as P25 (not Motorola), you should be able to receive them.

4234. Mot type II / P25 or P25 standard - Freescan

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-02 20:52:46 UTC
From: kb0gus
Topic: 4234 Message: 4234

All,

I've been messing around a bit with the different settings and see that there is an option on freescan to program the system type as either Mot type II / P25 or P25 standard.

I don't see that option in the manual... Does this apply to the 396xt?

If so, Which one should I use for these two systems?

http://www.radioreference.com/apps/db/?sid=6133
http://www.radioreference.com/apps/db/?sid=4390

They download from radioreference as Mot type II / P25

Thanks for your help.

P25 Standard for both should do it.

FYI. Unless you are really close to this system you won't be able to hear them. I can barely hear them in McKinney and have only one bar with an outside antenna in Sherman.

You can pick either type. It is there for compatibility with older scanner site types. When you upload, FreeSCAN will detect the type of scanner you are using and adjust the site type to the correct one.

4239. RE: [BCD396XT] P25 Systems?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-02 21:56:27 UTC
From: Patrick - Used 2-Way
Topic: 4230 Message: 4239

Keep in mind if these are Test Systems they might not be fully operational. So there might not be any traffic on it yet accept for the occasional testing.

Its common for a system to be up for a long time with little to no traffic while the Moto techs tweak and tune it.

To: BCD396XT@yahoogroups.com
Subject: [BCD396XT] P25 Systems?

Hello,

I'm trying to setup my BCD396XT to monitor the digital P25 systems Prosper Public Safety system (http://www.radioreference.com/apps/db/?sid=6527), and Frisco Public Safety (http://www.radioreference.com/apps/db/?sid=6630).

I have programmed both systems using FreeSCAN, but unfortunately, I'm not hearing anything. I understand that both are test systems, but from hearing others on the RR forums discuss activity on these systems, I think I'm missing something. Is there anything special I have to do (such as the band plan settings) to hear these systems?

Thanks!

That's how I found that they were P25 systems when I confirmed that they were P25 systems.

But, not sure what your post was intended to say.

Ah! Brilliant. OK, when I hit HOLD, I do indeed see the system ID. Good to know I'm receiving it. For any in the area, have you successfully picked up any voice traffic on either the Frisco or Prosper P25 systems? Thanks!

For new systems, make sure you use ID SEARCH, not ID SCAN, as
you may not have many active IDs in your list of TGIDs yet.

Thanks for the tip, Joe. Yeah, I do have it on ID SEARCH to catch any new TGIDs. Maybe I ought to leave it on overnight recording to see if I catch anything.

Have a safe and enjoyable 4th of July weekend, everyone!

Thank you. I am interested in a BCD 396XLT scanner as well as the pro106. Not sure which is the best model. I'm located in San Diego City which I am able to listen to SDPD no problem. But the other agencies I am not able to. So I would like a good scanner that will do this for me. Also are they simple to program.

Please feel free to email me at sdboy202@...

Thanks

It's XT not XLT. None of newer full featured scanners are easy to program when compared to the old
"Bank" concept but there is lots of software to ease the learning curve.
I use and prefer the BCD396XT but I know nothing about the PRO 106. As this is a BCD396XT list, well, not sure if you'll receive too many comments on the 106.

I have the GRE-PSR500 which is the same as one of the Radio Shack handhelds. I just can't remember which one. I also I have the Uniden BCD396XT. I use the 396XT for my main listening and have the GRE scanner to scan local PD. Since you are in a big city (San Diego), I'd definitely go with the 396XT since the interference rejection is significantly better than GRE/Radio Shack Digital Scanners.

Thank you. I am interested in a BCD 396XLT scanner as well as the pro106. Not sure which is the best model. I'm located in San Diego City which I am able to listen to SDPD no problem. But the other agencies I am not able to. So I would like a good scanner that will do this for me. Also are they simple to program.

Please feel free to email me at sdboy202@...

Thanks

New? Perhaps slightly used or lightly used but it is not new if you have used / programmed it.

Please allow me to digress. I personally own a 396XT which I programmed by hand and have programmed two 396Ts also by hand for pay. Additionally, I have made what I deem a valiant effort at programming a Digital Radio Shack scanner I believe was the Pro-96. I was never able to "get er done". There seems to be something more intuitive about the 396 which I find lacking in the RS scanner. Others feel differently and that's OK. If you opt for the XT you will discover a user guide CD disc not a manual which I don't like. The other comes with a book. Nevertheless, I recommend the XT. If you buy the 396 please feel free to contact me directly and I will assist you in the programming process. I highly recommend you learn to program your scanner by hand. This way you can do stuff "on the fly" because you know your scanner.

I agree with James opinion of programming some RS (GRE) scanners. I did
have a PSR 500 and sold it.
Even though I was able to use software to program it. I found it somewhat
difficult to use.
No doubt the PRO 106 is cheaper (now at Radio Shack for $379.99).

http://marksscanners.com/index.shtml will soon have an easier to read (per
his site) manual.
I really don't care for the Wiki format for manuals (as Uniden now has adopted)
The BCD396T is very similar to the XT and that manual is available to
download at Unidens site.

Also, go the files section of this group and download this file:
<http://f1.grp.yahoofs.com/v1/cBIxTLfwEVTZ7xYWIVoVbiRiHwdDNjM5jqizmNlaPH6TZqtmD1lgTnycmLAudV5PC-U14wo_OkQjHyqsQ1juDnNoPMkNvsPFMLWI/Update_for_BCD396XT_and_BCD996XT.pdf>Update_for_BCD396XT_and_BCD996XT.pdf

One other thing to consider, while the PRO106 might appear to be much cheaper, the price doesn't include a programming cable or a power adapter (which are not cheap) as the Uniden scanners do.

Hi Matt!

Welcome to the group! The 396XT is a great scanner. I love mine and consider it the best scanner I have ever owned. As mentioned, it like all late generation scanners are not generally easy to program. I'd say that the good majority of owners of these scanners use software packages for programming their units. The group archives will yield a great amount of discussion on what is available. If you do get a 396XT, I hope you enjoy it as much as we do!

Scott

Another excellent point. When attempting to program the Radio Shack Scanner I compared it with the feed which was online for Jacksonville FL and both scanners picked up the same unwanted interference on the same radio system and same talkgroups. The XT doesn't have the same problem.

Programming scanners is only as hard as you make it. It's really not that difficult but too many people over think things and make it harder. I don't think there has been a Uniden or GRE scanner including Radio Shack versions I haven't programmed, and everyone I have learned the programming by programming them manually. The first thing is READ the manual, not once but two or three times while waiting for the scanner to arrive. There are manuals online available for download. That way you know what your getting into. Once you open it and turn it on program a conventional system and then a trunked system by hand before doing anything with software....you probably won't have software if your on the road so learn to program manually FIRST! And don't over think things as you do it, don't get frustrated, just back up and start again if you make a mistake and follow the manuals instructions. It gets me how many think the manuals are too difficult to understand..... when in fact they are easy IF you read them.

It's XT not XLT. None of newer full featured scanners are easy to program when compared to the old
"Bank" concept but there is lots of software to ease the learning curve. I use and prefer the BCD396XT but I know nothing about the PRO 106. As this is a BCD396XT list, well, not sure if you'll receive too many comments on the 106.

From: tecatefourme
Topic: 4265 Message: 4265

How do you copy/save existing load to PC harddrive? I have new 396XT and want to save OEM memory load before starting to load San Diego city/county, CHP, etc., frequencies. I also have Scancat-Lite Plus software on CD. I agree with other posts regarding the Uniden manual not being what I would consider being up to snuff; it does not appear to have been proofed.

Any help in getting me started would be greatly appreciated.

There's no need to save the OEM memory since it remains in memory and can be restored by doing a full reset.

I'd forget about Scancat-Lite Plus since I've never heard anyone say anything good about it. You can download FreeScan (obviously for free)

http://scannow.org/

and it's fine software. You'll find information on learning to use and other useful info in the RadioReference wiki at:

http://wiki.radioreference.com/index.php/FreeScan_User_Guide

RadioReference.com is an excellent source of frequency information and if you purchase a premium subscription it can be used to directly transfer that information to FreeScan so that you don't have to type the data and risk introducing errors.

If you subsequently find that you need additional features that FreeScan doesn't provide, I'd suggest that you check into ProScan. Some people also find the ARC-XT software from Butel to be to their liking although I prefer FreeScan and ProScan. ARC-XT will certainly do the job for you if that's the one you prefer. Both ProScan and ARC-XT have free trial versions and FreeScan doesn't need one because it's free. All three can download data directly from RadioReference.com.

While there's been quite a bit of criticism of the Uniden manual because it isn't furnished in paper form, proofing is not generally considered to be its problem. You may just be finding that parts were translated from another language and the English isn't quite the way that we might be used to. If you do find an actual error in the manual, you can notify Uniden and it can be easily fixed because of the online nature of the manual. There have been a few such changes as well as additional explanations of things that needed clarification. You should therefore work with the online version rather than the one on the CD since it will be more up to date. You'll find it here along with links to other useful information:

http://info.uniden.com/twiki/bin/view/UnidenMan4/ScannerManuals

Hope you enjoy your scanner.

Dick

RadioReference.com should have the latest frequency information and that information will tell you if a particular system is a splinter system.

The best software for it is Freescan for Windows. Get the BCD396T manual
that will explain 98% of the scanner operations. As far as the pre-loaded
frequencies they are in permanent memory. If you ever want to start over
from scratch just turn on the radio while holding down the
HOLD - 2 and 9 keys
to wipe the memory and the scanner will prompt you for the chance to reload
the default settings.

In regards to frequencies probably the best resource I am aware of is Radio Reference Database. When you have the scanner in-hand I would be willing to assist you in the programming process. Just contact me via email. However, it would be accomplished quicker over the phone.

4279. Should I buy a bcd396xt ?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-06 03:32:17 UTC
From: s_t0r_m
Topic: 4279 Message: 4279

I am new to scanners and I was wondering if I should buy one of these toys. I am a ham radio operator and have experience with HT's/Operating HF and would like to get into this hobby. (Scanning/scanners).

I have done some research and I realized that there are maybe 2-3 other scanners that do APCO25/Digital/Analog similar to this scanner sold by radio-shack/other manufacturers..and those are a hundred or so bucks cheaper than this radio.

How come the other radios also looks very very similar in features to this but this one is much more expensive? Am I missing any special features?

Please let me know
Thanks

From: Wadie E. Suttles III
Topic: 4279 Message: 4280

I understand the question. And if I were new to the hobby, I would be asking similar questions too. So if I had to make a choice, I would base it on the most user friendly device available. It would have to decode the most modern trunking system available, that's monitorable. It will have to be sensitive in obtaining weak signals. And it would have to adapt to being a portable, a base and a mobile. So I chose Uniden. But as you can see, my choice was based on my needs. What are your needs?
Uniden is a giant in the scanner industry. They have a long history. This is part of the reason why product price mark up is noticed. The other reason is features, such as the GPS interface for multi-site trunking, fire toneouts, P-25 NAC codes and multi-color displays when squelch is broken. Now many of these features may be meaningless to you. But to people like me, who travels with my scanner, likes the idea of using a GPS to enable and disable system groups. In addition, I like seeing that if my display flashes red, I know that a fire department is communicating and if it beeps a certain tone, that a specific channel, I like to monitor, is broadcasting. Again, these are my perferences and my deciding factor on going with Uniden. You have to go with what's important for you.

Thanks for your time and enjoy the hobby.

Depends on what your looking at as to what features they have or don't have.
Also, these are not toys, too many people think that and thats the kind of
thing that hurts the hobby for those who are serious about. Thats also the
attitude that can lead to other bad things in the hobby.

As an owner of a BCD396XT, which I program by hand (rather than programming by computer/software), allow me to say it is a marvelous little gem. I've had occasion to fiddle with a Radio Shack equivalent and have been quite unimpressed. The old adage, "you get what you pay for" is appropriately applied to the XT. If, in the end, you opt for the 396 please feel free to contact me directly and will gladly assist you with the task of programming.

I'm probably going to be the odd man out here.

I have a GRE PSR 600 base mobile unit and a 396XT.

If I had to do over, I would probably get the PSR500 or RS equivalent rather than the 396

Here's why

Having used and programmed both I find:

- The PSREdit software friendlier to use (my opinion)

- Selecting/deselecting Scan Lists easier (my opinion)

- V-Scanner folders (if the Unidens have this I haven't found it)

Those are probably my top ones

The following can be a plus or minus depending on where you live/what you will be monitoring.

The GRE/RS seems to be a bit more sensitive than the Uniden, but that can also made it more prone to signal overload if you live in a very "signal dense" area.

But the Uniden has some features that the GRE/RS models don't

- GPS setting for towers

- Two tone sequential decoding (paging for fire/ems/etc)

I too have played with both units and prefer the 396. I prefer the Uniden programing/operating logic. Too me it makes more sense and is more user freindly. I have been using scanners for the past 30 years. My first was a Bearcat 220. I even worked a scanner store selling them for several years. Even with all my years experience, these new generation of scanners have come with a big learning curve. Both are great radios, but as far as which is better it comes down to personal preference. If you can, I would suggest getting your hands one of each and playing with them to see which you prefer.

Some come with accessories and some do not
Like the charger,antenna adapter etc. the 396xt is probably the best in the bunch! It comes with that stuff. Good Luck

I am new to scanners and I was wondering if I should buy one of these toys. I am a ham radio operator and have experience with HT's/Operating HF and would like to get into this hobby. (Scanning/scanners).

I have done some research and I realized that there are maybe 2-3 other scanners that do APCO25/Digital/Analog similar to this scanner sold by radio-shack/other manufacturers..and those are a hundred or so bucks cheaper than this radio.

How come the other radios also looks very very similar in features to this but this one is much more expensive? Am I missing any special features?

Please let me know
Thanks

I think all 396xt come with AC adapter and BNC to SMA antenna adapter

I got mine from the Ham Station, Evansville IN

Richard, what company did you purchase your 396XT that included all that stuff you just mentioned. I will be getting the scanner for my birthday in a few days and I don't know what company I should buy it from.

I'm not Richard but I'll try to answer you question. That's the difference between Uniden and Radio Shack. All those mentioned extras are included as standard when purchased from a authorized dealer.
I have purchased several scanners from Communication Electronics (www.usascan.com) and have received good service from them. Their price on the BCD396XT is $495.95 including S& H (delivered).
There are several similar dealers online.

I've bought several scanners, including two 396XT's from CEI (usascan.com) They used to be one of the only places where the full price ($499.95) included shipping. A lot of the other outlets were trying to charge $15 to $30 for shipping on top of that price.

The BCD396XT comes with all the basic goodies you need except for programing
software.

You can get from Amazon with Free Shipping

http://www.amazon.com/Uniden-BCD396XT-Handheld-TrunkTracker-Digital/dp/B001W0Y44K/ref=sr_1
_1?ie=UTF8&s=electronics&qid=1278445118&sr=8-1
ScannerMaster is also good.

You can get a lot of stuff cheaper at Amazon but this ain't one of 'em. They want 529.54. Even with shipping thrown in you can get it cheaper elsewhere.

I like to go to carmachicago.com and then click through to the
scannermaster web site from there. This way, the CARMA radio club
gets a few pennies to keep its great web site going, and you can buy
the BCD396XT for $495.00 at scannermaster.

They have reasonable shipping charges and on the same page where you
buy the radio you can also quickly buy compatible options including
antennas, ear pieces, ARC programming software if you want it, and
even purchase programming services from the seller if desired. I have
nothing to gain from this - just endorsing a well-organized,
competitively priced seller.

A lot of good info --- Looks like I will be buying a 396XT. I already have a antenna mounted on my car so I am sure I can use it as a mobile unit also. Only problem is that my local PD uses digital ENCRYPTED com, so Thats a pretty big downer -- in terms of listening. I wish someone has already figured out how to decode encrypted traffic.

Thanks for the info guys.
P.S: Anyone know the deep-nitty-gritty technical details of encrypted communication over the air?

Encryption (for P25) is fully documented in the P25 specification which can be purchased from IHS international (www.ihs.com).

Decoding without authorization would be illegal. Decoding without knowing the encryption key would be practically impossible.
UPMan

Subject: Re: [BCD396XT] Should I buy a bcd396xt ?

A lot of good info --- Looks like I will be buying a 396XT. I already have a antenna mounted on my car so I am sure I can use it as a mobile unit also. Only problem is that my local PD uses digital ENCRYPTED com, so Thats a pretty big downer -- in terms of listening. I wish someone has already figured out how to decode encrypted traffic.

Thanks for the info guys.
P.S: Anyone know the deep-nitty-gritty technical details of encrypted communication over the air?

Oh give encryption a break! You people who whine about encryption are
getting old. Encryption can be stopped, when a new system is announced make
sure YOU are involved and make your points valid that encryption is only to
hide from the taxpayers. Truth is only 1% of crimes are committed by someone
using a scanner. First off 99% of the criminals aren't smart enough to try
and use a scanner, those that are don't usually have the know-how to program
it, and in the case of the HomePatrol the criminals won't spend $500 or
more, that would cut into their profits too much and the few left over
wouldn't know what they are hearing anyway....their too stoned.
The HomePatrol will not add to departments using encryption.... stupidity
and lack of ACTION will.

Yes, it uses the same SMA type adapter that the current 396T have. The
HomePatrol uses the same antenna with a right angle hinged adapter. Its not
just stuck in the up position, you can move it to different angles..

can you connect an external antenna do the device? Cannot really tell from
the photos. Has anyone seen the software that goes with it? I am wondering
what you can or cannot do with it.

Topic: 4110 Message: 4300

They cannot set a cost until it receives FCC Type Acceptance.

The FCC has previously ruled that setting a price is the same as
offering the unit for sale.

My personal estimate is around $500.

One dealer had it listed for presale at $550, but that was taken down
quickly (I guess they didn't want to have to pay the FCC fines).

4301. Encryption

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-10 12:14:02 UTC
From: gcr33
Topic: 4301 Message: 4301

Stop encryption by what? When a Chief of Police decides he wants his radios encrypted you better believe they will. Why would any city council, board of commissioners etc. depend on a scanner listener over their Chief of Police?

Keep posting stuff like I heard the cops going for doughnuts and you will see it in your town sooner than you think. It does nothing for corruption or stopping illegal activities.

What about OPEN SKY that cannot be monitored even when not encrypted? Not only does the stuff not work you can't listen anyway.

Oh give encryption a break! You people who whine about encryption are
getting old. Encryption can be stopped, when a new system is announced make
sure YOU are involved and make your points valid that encryption is only to
hide from the taxpayers. Truth is only 1% of crimes are committed by someone
using a scanner. First off 99% of the criminals aren't smart enough to try
and use a scanner, those that are don't usually have the know-how to program
it, and in the case of the HomePatrol the criminals won't spend $500 or
more, that would cut into their profits too much and the few left over
wouldn't know what they are hearing anyway....their too stoned.
The HomePatrol will not add to departments using encryption.... stupidity
and lack of ACTION will

4303. WOW does this mean

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-09 22:57:34 UTC
From: James F. Boehner MD
Topic: 4110 Message: 4303

Rumored to be $499. Makes sense, as it will receive digital as well.

Yes, it uses the same SMA type adapter that the current 396T have. The HomePatrol uses the same antenna with a right angle hinged adapter. Its not just stuck in the up position, you can move it to different angles..

can you connect an external antenna do the device? Cannot really tell from the photos. Has anyone seen the software that goes with it? I am wondering what you can or cannot do with it.

4304. Re: Encryption

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-10 16:39:03 UTC
From: eph39
Topic: 4301 Message: 4304

Perhaps we did leave this topic behind yet clearly this is the best point in regards to the subject I think I've heard. Most tax payers don't realize the stuff run by them right under their noses when it comes to this stuff. Excellent point.

Yeah, I thought it stopped too, but just to answer his question, yeah, I know of three county board members here, and several small town board members who ALL listen to the police communications in our area. And those people KNOW it's our rights as citizens and taxpayers to know whats going on in our communities and they know that those of us with scanners help law enforcement and don't hinder it.
We have two chiefs of police in this county who desperatly want to go encrypted.....aint gonna happen! Both went out bought new radios had encryption put in them and those radios are sitting un-used because the board members and citizens said NO. So both departments won't be getting new cars this year since they wasted all that money on the radios and encryption. Both chiefs are lucky to still have jobs, although if one doesn't straighten things out he will be out of a job. Hmmm, no one has been tasered in three months by that department, they were averaging two a week for a while.

John

So those radios are just sitting there because they have encryption? That doesn't make any sense. If encryption is the problem, they can just transmit in the clear right? Sounds like there's more to it than that.

Topic: 4301 Message: 4308

There is, the fact they did it and didn't get approval FIRST, and the fact they can go encrypted when they want, and until they get the radios reprogrammed to remove the encryption they won't be used....no money to get them reprogrammed till next years budget....and then ONLY if the boards grant them those $$. Basicaly these chiefs are being taught a lesson about trying to circumvent the board and ultimately the taxpayers. Some boards have the balls to stand up to these chiefs who want to do whatever they want.

This is for the paranoid.
In my city and county law enforcement uses MDT's (mobile display terminals)they receive the assignment from dispatch over those MDT's. Is that encryption, NO. It's data. Furthermore, when they do get on the scene they all take out their cell phones and communicate that way. All the car accidents, lost dogs, fires, are dispatched in the clear for all to hear.
So lets ban MDT's and cell phone use in law enforcement.
Get over this encryption thing.

From: RJH
Topic: 4310 Message: 4310

Hi,

Where was everyone when the feds went encrypted? You guys did a great job of stopping that. As technology improves and costs come down, most public safety radio will be encrypted and I don't think anyone has stopped it, or will. They'll be a few pockets here and there, but when Statewide Systems like Florida and most major cities go to proprietary systems or encrypted, it won't be interesting to me anymore.

The radio companies have a vested interest to sell secure communications, it's simple dollars and sense. I can't believe that Motorola hasn't come up with a proprietary system like Open Sky that we can't monitor. I have to believe they are working on it.

You guys piss and moan and come up with ridiculous theories about all this, but no one comes up with the $500,000 to start, to create a court case on this. I think there is a fair possibility if all this went to court, we might win the right to listen and maybe prevent encrypted, communications. I don't have $500,000 and I don't care.

The day will come when people will say " I can't believe that people listened to Police and Fire communications, isn't that amazing!"

Sadly, it's groups like this, Droid Apps and whatever else is out there that provides excellent marketing material for Motorola, GE, Johnson, etc. Sadly the very people who enjoy the hobby most are the ones who will kill it. Having been a scanner enthusiast since 1970, if it goes away it goes away.

In many ways I hope I'm around long enough, and when scanners become paperweights I can say I told you so and laugh.

In the meantime, enjoy what you have and keep waiting for the Uniden Programming software that UpMan and Uniden Promised a year ago, way to go Uniden.

Ray

In my opinion secure comms are only needed for the Police during stakeouts, rapes just to protect the victims if they don't have MDTs, and undercover work. No Police Department needs secure comm for traffic stops or other routine calls (Breaking and Entering, Public Assist, Domestic Disputes, Assault etc) I can't think of any reason for Fire Dept or EMS to have encrypted comm. Sooner or later encryption will take over since all cities are in competition with each other like a bunch of school kids for bragging over who has the best new toy. At least some cities like Philly and NY have learned that NEWEST isn't always BEST for their situations.

Your board might be one of the few who care. I don't know where this board sits but it sounds like it's not a major city area.

As far as the radios being reprogrammed and sitting on a shelf?? That doesn't make sense and it's a five minute job to change it.

As the other poster said something is not right. If you and your board are that political in some police department maybe the Chief(s) should move on.

Can it be that the Chiefs had that much extra money in their budget that this board did not realize it?

Nope this thread is not dead.

hehehe.... no, they didn't have that much extra money, in fact they need more just to keep fuel and repairs up on the cars, and now 4 of the cars at one department are parked, 2 at the other.
It may be a 5 minute job per radio, your looking at 40 some radios and the cost adds up quick. Not too mention the cost incurred previously.
It has nothing to do with politics, it has to do with 1: money and how the departments are spending it 2: openess - there are some major issues with how these two chiefs tried to put this through without the boards knowing what was going on. All of this as one of the departments was being investigated for use of force in a number of situations. And both departments were being investigated for the unreal number of traffic stops and citations. Basically, the rule is, and always has been every penny the departments spend must be approved, that includes knowing all of the specifics of that purchase, and in the radio purchasing they have specifically said NO ENCRYPTION or speech inversion...period. Which has been in place since the two departments were first formed.

John

As law enforcement, I have used encryption and do not care for it. It proved many times to be a hindrance, esp when using in a mutual aid environment. Nothing beats a good clear analog or digital system. No need to switch back and forth.

4315. Voice Channels Not Decoding ... or something like that.

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-12 04:22:53 UTC
From: eph39
Topic: 4315 Message: 4315

From time to time my scanner, though locking in properly on the control channel will detect a transmission coming over a talk group and I will see a voice channel replace the control channel frequency which is what it always does. However, there is no voices. It only sounds like the control channel noise. I know there are comms being transmitted because there is a UHF frequency which calls are simultaneously dispatched on. I will hit the scan button when hearing a call go out to get it to the trunked system and there is this noise that coincides with transmission on the UHF frequency. I have also checked it with the formerly available feed for my city when it was online through Radio Reference to compare transmission duration etc. when this happened previously.So I feel reasonably certain the noise is replacing what should normally being voice communications for the fire department. (I hope that made sense.)

This has happened a few other times. Sometimes lasting several minutes. This occasion however it has lasted, so far more than 7 hours. In the past I just shut it off and sooner or later it corrects itself.

I should mention I've programmed mine by hand. I've had it since November of last year (2009). I have all the control channels that I am aware of programmed. I have all the known frequencies for voice programmed as well. For troubleshooting purposes I created a new site containing only the control channels and placed it on ID Search... to no avail. The problem still persisted.

Anyone have any clues in regards to this?

Getting the BCD396XT for my birthday.(Anyone know where to get a good deal with cable and cd) How would I know when to apply the Splinter on RCS channels. I'm aware that South Zone (Normal), and North Zone (splinter). Also would I be hear the same traffic on both North and South. Anyone that can help me I would greatly appreciate your assistant. And does anyone know if there is an easy way to program the scanner. Thank you everyone you can email me at sdboy202@.... Don't want to piss off anyone in the group.

Thanks....

Not surprised there isn't much response to this as I can't imagine you really care about what we do. However, that being said you have given me an idea. Not that anyone will jump on board. It is the creation of a fund which couldn't be pilfered by the greedy with the express purpose of paying the costs necessary to start legal action to stop encryption.

There probably isn't a single person able to bankroll such an effort outright, but if we all chipped in it might be a start.

Think of Hwy52 of the cut off point for the zones.
South of Hwy52 will be on Southzone.
North of Hwy52 will be on Northzone.

Will send you a PDF file of the system layout in another email off group.

Some places to buy the cable from. Check prices on the pages.
<http://www.bearcat1.com/Bearcat/item0038.htm>
<http://www.amazon.com/Uniden-Usb-Adapter-Cable/dp/B001JT346I>
Just click on the link for the cable.
<http://www.universal-radio.com/catalog/scanners/4396.html>

For software. Look near the bottom of the wiki page
<http://wiki.radioreference.com/index.php/BCD396XT>
You have many options
FreeScan (Free)
ARC-XT from butelsoftware.com
ProScan from ProScan.org

You can try calling HamRadioOutlet if they carry the cable.
I think they also of the Butel programming software on CD to buy at the store.
<http://www.hamradio.com/web/stores/sandie.html>

Getting the BCD396XT for my birthday.(Anyone know where to get a good deal with cable and cd) How would I know when to apply the Splinter on RCS channels. I'm aware that South Zone (Normal), and North Zone (splinter). Also would I be hear the same traffic on both North and South. Anyone that can help me I would greatly appreciate your assistant. And does anyone know if there is an easy way to program the scanner. Thank you everyone you can email me at sdboy202@.... Don't want to piss off anyone in the group.

Thanks....

It would help alot regarding the Splinter stuff if you gave an idea of location. As for the cabling and CD's. There is Freescan which as the title says is free software to program the 396XT I don't have the link handy at the moment. As for best deal on cabling (assuming you mean the programming cable for the computer) try grove-ent.com, scannermaster,com, and universal-radio.com and any local stores you know of. I've seen the price pretty consistent at 29.95 for it.

I have the same problem on some Digital channels. In my case the signal was weak so it was taking a long time for the scanner to decode the P25 signal.

Recently I have seen it occasionally on my County trunked system late at night but that could be due to re-banding. The county I live in hasn't re-banded yet

From time to time my scanner, though locking in properly on the control channel will detect a transmission coming over a talk group and I will see a voice channel replace the control channel frequency which is what it always does. However, there is no voices. It only sounds like the control channel noise. I know there are comms being transmitted because there is a UHF frequency which calls are simultaneously dispatched on. I will hit the scan button when hearing a call go out to get it to the trunked system and there is this noise that coincides with transmission on the UHF frequency. I have also checked it with the formerly available feed for my city when it was online through Radio Reference to compare transmission duration etc. when this happened previously.So I feel reasonably certain the noise is replacing what should normally being voice communications for the fire department. (I hope that made sense.)

This has happened a few other times. Sometimes lasting several minutes. This occasion however it has lasted, so far more than 7 hours. In the past I just shut it off and sooner or later it corrects itself.

I should mention I've programmed mine by hand. I've had it since November of last year (2009). I have all the control channels that I am aware of programmed. I have all the known frequencies for voice programmed as well. For troubleshooting purposes I created a new site containing only the control channels and placed it on ID Search... to no avail. The problem still persisted.

Anyone have any clues in regards to this?

The BCD396XT comes with a serial cable and the documentation CD. If you have a computer that doesn't have a serial port, then you can use either a serial to USB converter or the Uniden USB-1 cable which has the serial to USB converter built into the cable. Generally, a converter will be less expensive than the USB-1. If your computer is a desktop/tower type, you can also buy a serial card that will provide you with a serial port so that the included cable will do the job.

While there is no easy way to program the scanner if you've never programmed a scanner such as this, programming is easiest using one of the computer programs created for that purpose. I'd suggest that you start with FreeScan which is free. If you need more features, check out ProScan and ARC-XT, both of which have free trials. Eventually, it would be good to learn how to program the scanner manually for those times when you are away from the computer and need to make some changes.

I have no idea where you are or what systems you are referring to when you ask about splinter usage. However, that information is generally available on RadioReference.com with the other data about the particular system. Also, a premium subscription to RadioReference will allow you to download frequency data directly from the RR website to your software so that you don't have to type in all the data manually. This will save considerable time and eliminate one more opportunity for errors in the process.

Another tip...

I know in the past at the local HamRadio Outlet. They are able to program scanners.
So give them a call or go to the store and look around and ask them about programming your scanner.
<http://www.hamradio.com/web/stores/sandie.html>

He is talking about this system...

San Diego, County of (RCS - Public Safety)
<http://www.radioreference.com/apps/db/?sid=499>

Please be aware that all 800MHz frequencies used in San Diego between 851.0000 and 865.9875MHz are assigned from the SPLINTER bandplan. This means they are offset by 12.5kHZ (e.g., 856.0125 is not used, instead 856.0000 is used in its place). When programming any Motorola 3600 trunked system you must program the system as a splinter system.

It is recommended to program systems or sites using frequencies between 866.0000 through 868.9875 as splinter systems. This will not affect operation and tracking. If and when a site adds frequencies below 866MHz you will not need to change any system/site programming options.

Examples of splinter systems: San Diego County RCS and City of San Diego.

Sorry but you seem to have a BIG axe to grind with the police. (Speeding ticket, DUI, arrest???)

What does use of force have to do with radios? If these are indeed 40 new radios I am sure the shop that sold them will take care of it.

Back to the person who said what do the police need encryption for in regards to break ins or as the rest of the world calls them burglaries.

It would be much nicer to send the officers out without the bad guys having a clue. Yes the bad guys sometimes have scanners, yes not everyone who listens to a scanner is a good guy.

San Francisco has for years encrypted it's EMS to Hospital communications.

Again if you are using Open Sky for your fire department is that encrypted since you can't hear it on your scanner? Why do you think some agencies were foolish enough to try this system out? A selling point, there are no scanners available currently that can monitor the troops.

Are you the guy who has something to prove by programming your radio by hand? If it is you please tell me what you gain?

Try Freescan, you might have rebanded systems and have not enabled the custom band plan.

BTW, I have programmed a system or two by hand when necessary but why do the whole thing. I have 99 quick keys in use with 24% of the radio programmed.

I sure could use another 99 QK so I could add more.

Just bought one of these scanners and trying to figure out all the bells and whistles. The manual on CD is not very user friendly I just programmed it but having problem as to how to group certain frequencys and how to switch to others. I primary want to group and scan my local frequencys, to lock in on only those with out scanner searching and jumping to other systems and groups.Any insights would be appreciated,thanks!

you might want to look over this web site as it makes it very to understand a lot about this scanner and how to program it.

Agreed, the CD manual is not the greatest for understanding this fine scanner. Go to the Uniden web site and find and download the good manual for the BCT396T, they're very similar. Then go the file section of this Yahoo group and find <http://f1.grp.yahoofs.com/v1/UCU-TAvhtBCI9HdqmB85-EB4BNicvDrCIozCEHkAsekdLfw1q6tnDtWdf7ItAZID08lOyukUFJ0xtHGC29uCfBsTcZh_gi8zR3BW/Update_for_BCD396XT_and_BCD996XT.pdf>Update_for_BCD396XT_and_BCD996XT.pdf

This has the differences in the two scanners.

Get some programming software, there are several. When it's in front of you, on the screen, it'll be much easier to understand. And see message #4338 of this group.

My advice would be to start off simple, trying to program a whole heap of systems, sites and groups all at once can make the scanner seem impossible to use for someone new to a scanner with so many features?

Try creating just one conventional system first, add a local frequency and start scanning; then add a second frequency; then maybe create a second system for a different agency's conventional freq; have a play with some of the other settings (like the back light colors for example) and once you're familiar with doing the basics you could sit back down and enter a new system for a local trunk tower, tell it to ID SEARCH and then listen and play again.

I would recommend programming at least the first few systems by hand just to get a feel for how the dynamic memory works, after that by all means hook it up to your computer and get yourself some software.

Just my opinion, I hope it helps? If you get stuck along the way you can always come back to this forum and ask?

Andrew

4344. Re: [BCD396XT] Re: Need Help

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-15 01:16:09 UTC
From: Richard Victor
Topic: 4337 Message: 4344

With all due respect, I'm going to present the other side. Programming with software enables one to visualize the structure of the data as it will be within the scanner. You can see that conventional systems have groups and that those groups have channels comprised of individual frequencies. More significantly, you can see that trunked systems have sites and that sites have frequencies. Those systems also have groups which have talkgroups.

Setting up things such as system/site/service quick keys and group quick keys is also easier because you can see what you've done already. Otherwise you have to remember that you've assigned SQK x to the xxx system and GQK y to the yyy group. Unless you lay that all out on paper in advance you'll find that something is screwed up and have no clue as to what or where it is because you can't see it.

Another advantage to starting with software is that it enables you to get an already working file from someone in your area or someone who is willing to create one for your area so that you can get some idea of how these things are done. There's no practical way that you can do that manually. Further, if you have a problem, you can send a copy of your datafile to a list such as this and someone can look at it and point out where you slipped up. Can't do that if you program manually either.

You can also sign up for a premium subscription to RadioReference.com which enables you to download data directly from RadioReference into your software for subsequent transfer to your scanner. This not only saves hours of time, but also avoids introducing additional errors as you enter literally hundreds of button pushes.

I'm all for being able to program manually and think it's an important skill to develop. I just think that it's easier to do so after you've done it the easier and more logical way using software. Given that FreeScan is available for free, it's a good starting point. You can try ProScan or ARC-XT later if you need more features using their 30 day free trials. You may find that one program suits you for loading your data and that another is better for remote control, logging, and perhaps recording. There's no reason that you can't use one for one purpose and another for some other purpose.

If you have a computer with a serial port, you're all set with the cable that comes with the scanner. If not, you either need a serial to USB adapter or the Uniden USB-1 cable which includes a built-in adapter. The adapters are generally less expensive. In either case, be sure to install the driver software before connecting the cable for the first time. If you have a desktop/tower type computer, you can also add a serial port by means of a plugin circuit card.

Hope you enjoy the new scanner.

Dick

I agree with Dick 100%. I started off with a file from someone else, then went on to update it with downloads from RadioReference, then made some small adjustments myself. I could not even imagine trying to program this radio without software.

Best regards,

L.

4346. programming the scanner

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-15 13:14:43 UTC
From: Matthew Kurzon
Topic: 4346 Message: 4346

for programming the 396xt, first, thanks so much to
marks scanner, i have been looking for such info !!!

can't wait for the 396 xt page.. but of course will.. want
accuracy over speed!!!

second, in answer to the question, what i did was i bought
software to help with programming my scanner and i'm
very happy that i did! i'm no advertisement for this stuff,
i'm just a user like you, i bought two of them, arc xt, and
then recently proscan, the latter is better although you have
to be careful with its use... it does erase what is in the scanner,
but then it replaces it.. it also has a very very nice interface
that makes the computer look like a table scanner.. for $50
you get an eternal membership with upgrades

for software you need the wire from uniden to connect the radio
to the computer..

matt.. it's ok to write to me if you have questions, i've been thru
this and it is my opinion that software is the way to go

I just want to mention that, and I know this is a bit contradictory,
I use my 396xt as a base station. I like the size for ease mobility..
I bought a cheap Radio Shack "scanner antenna" and it made a big difference in reception.
I'm not saying an even better antenna wouldn't
boost reception even more! I'm sure it would and I should look into it,
I wanted a scan duck but I got no responses from those people.. As a matter of fact, if anyone knows of a reasonably sized but excellent scanner antenna please let me know!
Thanks.

To repeat, the antenna that comes with the radio doesn't get good reception at all! (I am on the list for whatever Uniden is coming
out with for 10.99)

I use the following antenna with my 396XT and it has helped my reception alot. I hung it from a hook in my ceiling since my condo doesn't allow outdoor antennas. I haven't tried the antenna with my GRE PSR-500 yet. You never mentioned if you mounted the antenna inside or put it outside?

Hi Jeff:

Wow! That is great information!

For probably about $110 in all, I can get a super antenna that is
actually powered.. That has got to pull in the signals!   (or maybe
a little more for the adapter in price?)

Since this is the bcd396xt group, I'm assuming that you have
this radio, and that the antenna connects easily to it.

I live near NY City, and some of the signals come in great, but
some are not so great..

I like the radio.. I have two softwares, Arc XT and Pro Scan.

I got the 2nd because I think it is better than the first..

Matt

I got that antenna at www.scannermaster.com. I also recommend you get the 12VDC
wall wart so you don't have to use AA batteries.   Here's the link:

Hi Jeff:

Thanks so much!!!

Do you have a store you like to buy this antenna?

I prefer to use an indoor antenna, to avoid problems like wiring and
lightning.

I use the following antenna with my 396XT and it has helped my reception alot. I hung it from a hook in my ceiling since my condo doesn't allow outdoor antennas. I haven't tried the antenna with my GRE PSR-500 yet. You never mentioned if you mounted the antenna inside or put it outside?

I just want to mention that, and I know this is a bit contradictory,
I use my 396xt as a base station. I like the size for ease mobility..
I bought a cheap Radio Shack "scanner antenna" and it made a big difference in reception. I'm not saying an even better antenna wouldn't
boost reception even more! I'm sure it would and I should look into it,
I wanted a scan duck but I got no responses from those people.. As a matter of fact, if anyone knows of a reasonably sized but excellent scanner antenna please

let me know! Thanks.

To repeat, the antenna that comes with the radio doesn't get good reception at all! (I am on the list for whatever Uniden is coming
out with for 10.99)

Hi Jeff:

Wow! That is great information!

For probably about $110 in all, I can get a super antenna that is

actually powered.. That has got to pull in the signals!   (or maybe

a little more for the adapter in price?)

Since this is the bcd396xt group, I'm assuming that you have

this radio, and that the antenna connects easily to it.

I live near NY City, and some of the signals come in great, but

some are not so great..

I like the radio.. I have two softwares, Arc XT and Pro Scan.

I got the 2nd because I think it is better than the first..

No noise figure or gain figure in the ad. IMD figure would also be
useful. Ask if you can return it if it doesn't live up expectations.

That depends on location and numerous other factors. If he's in the country
it may work better, but if in an RF filled area it may not be so good.....
it all depends.

John

Active antennas are helpful in some situations but in many situations they make things worse because of receiver overload or the amplification of the noise as well as the signal. I'd make sure that it can be returned in case it doesn't work out and keep in mind that even if you can return it, you'll usually be out shipping in both directions.

I am in Englewood NJ, which is about 6 miles from the Hudson River,
on the other side of which is northern Manhattan, New York City.

Is that sufficient RF?

That depends on location and numerous other factors. If he's in the country
it may work better, but if in an RF filled area it may not be so good.....
it all depends.

John

From: Richard Victor
Topic: 4347 Message: 4359

I'd be inclined to think that an active antenna would do more harm than good in that environment .

4360. Re: [BCD396XT] antenna

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-15 21:46:00 UTC
From: Matthew Kurzon
Topic: 4347 Message: 4360

i have to defend jeff on this one, this is a suburb, not the city itself...

i believe (ok he told me) that he also is in a suburb of the same city,
and isn't having a problem with his antenna .. you'd get more of a problem
if you put it next to your computer than from outside transmissions

i think we're trying to arrive at the truth, what we need is to hear from
jeff!! since he originated the idea, owns the antenna, and can tell us
what his location is and what his experience with the antenna has
been

plus, i will say this: if i do get the antenna he suggested i will report my
experience here, for the edification of everyone..

i have been warned of the pitfalls! now i would like a bit more convincing
from jeff if he is still a member here..

matthew

4361. Re: [BCD396XT] antenna

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-16 03:41:36 UTC
From: Jeff Miller
Topic: 4347 Message: 4361

I actually can only attest to the effectiveness in my area which is almost all Trunked and 800Mhz traffic in the Fort Lauderdale Florida area. NYC has alot of 450-470 traffic from what I remember and NJ I have no idea. I am originally from Stamford Ct so I know about scanner reception in SW Connecticut. Not much help in New Jersey.

4362. Re: [BCD396XT] antenna

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-16 21:56:43 UTC
From: zz455@aol.com
Topic: 4347 Message: 4362

I have manually programmed a few local frequency's thru quick save program. The problem I am getting is when I try to scan those few channels it strays and starts scanning and searching other frequency's , I cant figure out how to stop that. Is there a way to lock and scan only those I want to scan or am I doing something wrong by not setting these channels? I went as far to delete all the saved programs even the preloaded ones, just want to scan the local ones for now. Help!

In a message dated 7/15/2010 11:41:46 P.M. Eastern Daylight Time, jafarm66@... writes:

I actually can only attest to the effectiveness in my area which is almost all Trunked and 800Mhz traffic in the Fort Lauderdale Florida area. NYC has alot of 450-470 traffic from what I remember and NJ I have no idea. I am originally from Stamford Ct so I know about scanner reception in SW Connecticut. Not much help in New Jersey.

i have to defend jeff on this one, this is a suburb, not the city itself...

i believe (ok he told me) that he also is in a suburb of the same city,

and isn't having a problem with his antenna .. you'd get more of a problem

if you put it next to your computer than from outside transmissions

i think we're trying to arrive at the truth, what we need is to hear from

jeff!! since he originated the idea, owns the antenna, and can tell us

what his location is and what his experience with the antenna has

been

plus, i will say this: if i do get the antenna he suggested i will report my

experience here, for the edification of everyone..

i have been warned of the pitfalls! now i would like a bit more convincing

from jeff if he is still a member here..

From: Jeff Miller
Topic: 4347 Message: 4363

Did you happen to notice if the frequencies you programmed in were Control Channels for trunked systems? If they were this is the reason you are getting other frequencies because Trunked systems use a control channel to tell the system what frequency the system is transmitting on. Look up trunked systems on google for more info as this is basic info

4365. Re: [BCD396XT] antenna

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-16 22:21:03 UTC
From: Matthew Kurzon
Topic: 4347 Message: 4365

I would like to know the answer to that too!

I know you can push hold, and it will stop scanning, then you can
rotate the knob and manually go up and down.

I also suggest a good software program: ProScan. For $50, you get
a really nice program that is a lifetime membership: the author will
update it as long as.. I guess he is around.

It is a beautiful piece of workmanship. But be careful when uploading
frequencies, it will delete everything in your radio unless you change
the options! But I found that that was ok, when I rebuilt all my frequencies.

Matt
Englewood, NJ

From: "zz455@..." <zz455@...>
To: BCD396XT@yahoogroups.com
Sent: Fri, July 16, 2010 5:56:43 PM
Subject: Re: [BCD396XT] antenna

I have manually programmed a few local frequency's thru quick save program.
The problem I am getting is when I try to scan those few channels it
strays and starts scanning and searching other frequency's , I cant figure out
how to stop that. Is there a way to lock and scan only those I want to scan
or am I doing something wrong by not setting these channels? I went as far
to delete all the saved programs even the preloaded ones, just want to scan
the local ones for now. Help!

In a message dated 7/15/2010 11:41:46 P.M. Eastern Daylight Time,
jafarm66@... writes:

I actually can only attest to the effectiveness in my area which is almost
all Trunked and 800Mhz traffic in the Fort Lauderdale Florida area. NYC has
alot of 450-470 traffic from what I remember and NJ I have no idea. I am
originally from Stamford Ct so I know about scanner reception in SW
Connecticut. Not much help in New Jersey.

i have to defend jeff on this one, this is a suburb, not the city itself...

i believe (ok he told me) that he also is in a suburb of the same city,

and isn't having a problem with his antenna .. you'd get more of a problem

if you put it next to your computer than from outside transmissions

i think we're trying to arrive at the truth, what we need is to hear from

jeff!! since he originated the idea, owns the antenna, and can tell us

what his location is and what his experience with the antenna has

been

plus, i will say this: if i do get the antenna he suggested i will report
my

experience here, for the edification of everyone..

i have been warned of the pitfalls! now i would like a bit more convincing

from jeff if he is still a member here..

Just to clarify, it's intentional that ProScan deletes all of the
channels prior to loading the new data. If, for some reason, you don't
want it to do that, you can just change from the default to one of the
other choices that are presented each time you upload data to the
scanner. There's really nothing to be careful about. It's how most
users would want to have the data loaded into their scanner. Otherwise,
there's a good chance that you'll end up with duplicate systems in your
scanner and have no easy way to know what you've got.

From: Matthew Kurzon
Topic: 4347 Message: 4367

To check for duplicates in ProScan, download all frequencies from the radio to the software. Then go to Systems and it is ProScan shows clearly you have loaded in the radio. You can see if you have duplicates quite easily here.

When uploading frequencies to the radio, the beginning user needs to be aware that the software will delete frequencies already in the bcd396xt, depending on the settings; if you are familiar with the software this is well known to you.

Topic: 4346 Message: 4369

Here is how the upload works:
The upload options default is "Delete All Items In The Scanner That Are Not In The Database Before Uploading. - Recommended". This is the top item in the options. I don't know how it can be made clearer? "Recommended" in large red letters?

ONLY the items not in the database will be deleted. That way the scanner items (systems/groups, etc.) and the database items will be an exact replica of each other.

The systems/groups/channels are NOT deleted and re-created. That would cause the lockout freqs/TGID's and group quick key assignments not to work because deleting and creating makes the scanner re-index the items and lockout freqs/TGID's and group quick key assignments are based on indexes.

There is an exception. If a database item (node) has been has been copy & paste or dragged & dropped then the first upload after that, the item is deleted and re-created in the scanner. The ideal behind that is you can paste as many items as you want from one copy

I always enjoy reading what others are saying about ProScan. Comments, other perspectives, debate, etc. are good things. I'm always evaluating ProScan to make it better and if something needs changing, I'll change it (hopefully for the better).

Bob Aune,
ProScan

Hi Bob,

ProScan is Fantastic, I love my BCD396XT and ProScan is the perfect match for the radio!

Thanks so much for your super program,

Matthew

By the way, for those interested, ProScan has an interface on your computer that turns your computer into a simulated table radio. It functions along with the radio

in real time, with buttons and dials that work, and a display that shows what you're
listening to. I have Arc XT as well, but ProScan is much better! I found actually

that it is good to have both if you can, but ProScan is quite enough and is the superior
one by far.

Thanks for the correction, Bob. In my haste to point out that ProScan's handling of this issue was not a defect, but an intentional design decision, I got my fingers typing faster than my brain was working. Not the first time, and probably won't be the last, but still unfortunate when I do that.

Sorry.

Regards,

Dick

I am just wondering how much trouble it would be to trim some of these posts before replying so that the same messages do not go out over and over.

BTW Freescan is free and offers free updates as long as the author wants to. It does not delete frequencies.

I do not work for or am I associated in anyway with any of the programs that are free or you pay too much for.

4373. Files for the FILES section

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-20 08:12:01 UTC
From: MCH
Topic: 4347 Message: 4373

I was looking for a quick Bell Fleetnet TRS (Ontario, Canada) file for Freescan earlier and I noticed that not too many files were uploaded to the FILES section of the group. These are a great resource for travelers, newbies, or folks like me who take advantage of enhanced propagation for areas we normally cannot hear, as was my case tonight.

I did make up a file for a couple sites, but sure could use a pre-made file that has all the Zone 2 sites already setup with bandplan and all. I think this will require a couple files for each zone since there are too many TGs to put in one system, but that's OK.

So, consider this a general call for any files you may be willing to share with others. This applies not only to FreeScan, but ARC and ProScan as well as any other formats. It also applies to all areas.

Bob per your request

One of three
I would like to ask you to consider adding the capability to allow one
to set the screen colors of the XT class devices so that one can
coordinated with the colors

the user has set within the XT. So if I set a Talk Group ID to display
with a red screen within the radio, I would like to be able to tell
ProScan to display that talk group with a red background. This will
help provide visual alerts to me on the screen like Uniden intended
when using the radio display.

Thanks.......and Keep Safe!

Date: 2010-07-22 16:41:59 UTC
From: RJH
Topic: 4375 Message: 4375

Hi all,

I have to agree. I have uploaded several Pro Scan Files for the XT for New England and Indiana. The New England File covers all of NE and the Indiana covers the State Safe-T System, MECA (Indianapolis) State Agencies and some Conventional Systems. I was out there in May and it looks like most local and county agencies are on the SafeT System.

That's one of the reasons I joined these groups. Come on everyone please take the time to add files. We should be able to go anywhere in the US and Canada and have a file available to us If there is an interest I will post some UASD Files on the 396 List for those files also

Thanks

Well, I suppose you shouldn't expect your suggestion to attain top priority, or perhaps any priority at all. But Bob's a nicer guy than I'd be so he may still have your suggestion on his list.

4378. Re: [BCD396XT] Digest Number 507

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-22 20:03:28 UTC
From: johnstark
Topic: 4375 Message: 4378

Most of Indiana's counties have TG's assigned, doesn't mean they actually use them. Most of the state is still using their own systems or channels, not SAFET. A few are simulcast and some counties have agencies that use it for mutual aid or use it part time (my county is one of these). But not that many use it full time, the number of agencies using it seems to grow monthly, however there is a major issue brewing where the IPSC has odered that all new radio purchases be digital so they can update the system to P25 IP base due to the fact they are running out of radio id's.
There are 92 counties and maybe 1/3 at the most use it full time.

John

4379. Indiana Safe-T et al

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-23 15:31:53 UTC
From: rjhill3@cs.com
Topic: 4379 Message: 4379

Hi John,

You may be right about Indiana. All I know is Hendricks, Putnam, Owen, Parke, Vigo, Johnson, Morgan, Clay, Boone and Hancock County are on Safe-T. I'd be interested to hear who isn't. The channels I put in on my files have active Safe-t Systems and little conventional traffic.

Can we count on you adding files to the folder, which what the original request was about.

One of the complaints I have with all of the Yahoo Groups is people ignore what they don't want to deal with. The corrections and additions about Indiana are great, but the request for files was ignored, will people be adding files?

Secondly I complained about Uniden's Crappy Service, I see the point about idiots not being able to turn down the volume on ear pieces and Uniden's potential liability. As not everyone uses earpieces, can we have two models, one without the speaker connection and one with one, so I don't have to buy a powered speaker. Maybe we could have a modification and sign a hold harmless document. Secondly no one ever addressed the other two problems, the promised UASD Software for the 396XT which Uniden just ignored and the fact that the Australians never got any firmware updates.

Finally, yes Joe has a tough job being the moderator. Although he's much more patient, understanding and accomodating than I'd like him to be he still does a great job.

Ray

Not sure why he sent this to the list too but... just to keep the info corrrect: about SAFET

Hancock Co - has some channels simulcast from their VHF, the county is not on SAFET except for mutal aid between the Sheriffs dept and ISP or DNR o Shelby Co Sheriff, Henry Co Sheriff, and on extremly rare occasions IMPD and Marion Co Sheriff. At this point it doesn't appear there will be enough money any time soon to get enough radios fo the Sheriffs dept to go to SAFET full time. There are still coverage issues as well even with the addition of the Wilkinson site. The main issues with coverage now are up in McCordsville and down in New Palestine, especially at the high school and middle school. Greenfield PD uses the system but it is all simulcast except for undercover work and special events. The fair both Sheriff and GPD used SAFET ops channels. BTW, I live in this county so thats why I know whats up here.

Morgan Co, uses SAFET, but after the floods kept its VHF system online as backup so don't get rid of those VHF channels
Boone Co 100% VHF simulcast to SAFET, and it appears it will stay that way a while
Clay, never hear them but should.... I hear Vermillion Co Sheriff
Putnam Co about 50-50 on SAFET use
Johnson Co - 100% SAFET
Wayne Co - just switched to SAFET Sheriff and Richmond PD both on it
Madison Co - some use of SAFET but not much, no Sheriff, still on LTR along with other county units and all fire still on VHF Anderson PD/Fire still on UHF with 800 LTR backup
Delaware Co - Heavy use PD/Fire/EMS
Hamilton Co - other than Westfield PD still on the newly rebanded EDACS system....still sounds awefull!
Howard Co - still on EDACS
Tipton Co - SAFET - still has VHF as backup - quiet up there though
Grant Co - SAFET - still some VHF though
Decatur Co - SAFET - be nice if someone in the Greensburg area could figure out what Toyota is using in the new plant
Batholomew Co - SAFET - Columbus still uses the old 800 and VHF channels, Sheriff uses SAFET and old VHF a lot, Fire uses SAFET

I'd suggest not getting rid of the VHF/UHF channels too soon, many departments are keeping them, and some use them alot. Bartholomew Co is always telling deputies to "go low" meaning to their VHF 155 radios. I guess they think no one hears them anymore. Many though learned the lesson Martinsville did during the floods when SAFET was unsable do to too much talk, no one could get anything but a busy. So Martinsville went back to the VHF system and now it's their back up to SAFET

John

4381. Feature request for next Firmware Update

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-25 23:56:55 UTC
From: Robert
Topic: 4381 Message: 4381

I was just wondering if it would be possible for uniden to add a option in the radio to turn off the low battery indicator noise. Is it possible in the next firmware update for these radios, that a battery indicator option could be added to toggle the low battery beeps on or off for those who like them eneabled and for people like me that think its a little annoying. Other wise the BCD396XT is a great radio. In my opinion way better than the GRE radios. I know uniden watches this forum and i was hoping to catch the eye of someone who could maybe make this happen.

Thanks,
Bob Klamp

Paul,

As I user I need the keybeeps and do not want/need the battery-low indicator beeping every number of seconds. Especially when using an earphone or headset, which is most of the time that I am out of the house.

Thanks.......and Keep
Ken Stark W4KJS / WQCB806

Thanks UPman, it is worth looking at the online guide I can see right away!

Another 396xt owner, love the radio but sometimes get stuck. I look at the PDF file but I can see that the online guide may be clearer. I'm also waiting for that online guide that guy is going to write.. can't find it at the moment, have it somewhere...

Subject: [BCD396XT] Feature request for next Firmware Update

I was just wondering if it would be possible for uniden to add a option in the radio to turn off the low battery indicator noise. Is it possible in the next firmware update for these radios, that a battery indicator option could be added

to toggle the low battery beeps on or off for those who like them eneabled and for people like me that think its a little annoying. Other wise the BCD396XT is a great radio. In my opinion way better than the GRE radios. I know uniden watches this forum and i was hoping to catch the eye of someone who could maybe make this happen.

Thanks,
Bob Klamp

Hi If you go into
Menu -> Settings -> Adjust Key Beep -> Off
you can disable all beeps.

It would be nice to have the beep settings separated
but with home patrol taking over I doubt if we will need
those options in the near future.

Hello All

this question may have made its round. But can someone help me to set up the radio so i can program it with freescan. Im not sure if you have to push any buttons on the radio to put it in the programing mode. The manual is hard to unerstand. Any help would be helpful.

Ok with freescan you select the radio program setup that you have either A saved or B created the next thing you do is go into the virtual scanner area and setup you com port click the auto button near the bottom and it will find the right scanner that I'd connected to the computer once it does that close the virtual scanner window then click the upload button and choose the options you want

Andy,

You need the cable that came with the scanner. It has a DB-9 RS-232 serial connection on the PC end and a small 4 pin connector on the other. Plug into the scanner and the PC. Fire up Freescan. Turn on the scanner. Select the tab marked "Download from scanner" and follow the prompts. No special buttons to push. You should download the entire contents of the scanner which will include all the preloaded trunking systems information. At this point I would save the file as "original" or any name that you will recognize as the factory default programming. From there you can add/delete/edit any information you wish. I usually delete all the files that are not usable in my area then add new systems and groups for the local info I want to listen to. When done select the "Upload to Scanner" tab decide if you want to wipe all the existing info or just add to it, and load the file into the scanner. Save your modified program under a new name ane enjoy.

I live in Englewood, NJ and I'm finding that I can't get Mt. Vernon NY Police on my scanners at all, but they
come in loud and clear on the RR live audio. (Englewood is about 20 miles from Mt Vernon)
I do get lots of other places, far away like Central NJ, and all over NY City for example. I used to get Mt Vernon

(where I grew up, thus the interest) in the early 90s, but now, nothing.
Anyone know anything about this?
Thanks very much,
Matthew

I've seen a lot of replies, but I don't think anyone has hit the answer yet.

In your SAME settings, program in your local FIPS codes and when you set
the alert mode, don't choose ALL FIPS - choose the grouping you set up
for your area.

From: Matthew Kurzon
Topic: 4390 Message: 4397

I have a lot of systems programmed into my scanner. But I tried searching the CB band once, and now while scanning, the radio retains the CB band as a system (?) and keeps coming to it while scanning, and searches for a signal.
How can I remove CB from my list of frequencies to automatically scan?

Thanks very much,

Matthew

Hi Joe,

Thanks so much for your answer!

When I do that, what is it telling the radio to do?

Will it leave CB as a System on the radio?

I found it difficult to find the answer in the online guide from Uniden
as well as the PDF. Maybe it is there, but I didn't see it.

Thank you,

Matthew

It's telling the scanner to lock out that System (and not just a
Temporary Lockout which would be FUNC L/O).

It will leave the System in the scanner and just will keep it locked out
until you unlock it (via the menu).

I'm sure it's in the guide, but you have to know to search for Permanent
Lockout. Of course, if you knew what that was, you would not have to
search for it, would you? :-)

Joe-

By the way, I usually do try L/O L/O, but without F; so am I correct in the deduction that pressing the Function key makes L/0 work for Systems rather than just an individual frequency?

Thanks,

Matthew

PS Your answers are all very much appreciated!!

Hi Joe:

Then to unlock the System, I am guessing that I can do something
like the reverse using the scroll bar. Or in ProScan, Jump to CB and
I'm not sure what to do if CB has been locked..

Thank you,

Matthew

Subject: Re: [BCD396XT] stop scanning CB

It's telling the scanner to lock out that System (and not just a
Temporary Lockout which would be FUNC L/O).

It will leave the System in the scanner and just will keep it locked out
until you unlock it (via the menu).

I'm sure it's in the guide, but you have to know to search for Permanent
Lockout. Of course, if you knew what that was, you would not have to
search for it, would you? :-)

Are you looking for software to program the BCD396XT?

If so, ProScan (www.ProScan.org) is without a doubt, the most superior software you can possibly get for the radio..

When I was looking into it, the author Bob Aune recommended that I try the 30 day free trial. I examined the software briefly and I knew that it was absolutely incredible, by comparison, I already had ARC XT software.

It was only a matter of about 10-15 minutes before I decided to buy ProScan for $50, and a better purchase I have not made other than buying the Uniden Bearcat BCD396XT radio.

This software is more than amazing. There is not enough that can be said about it. It is a work of art, in addition to a feat of technical wizardry. It turns your computer into a tabletop radio!

In addition, $50 gets you lifetime updates.

I write all this as a *user* of the software, I am not connected with it whatsoever
financially or any other way! Honestly!!

Matthew

There is one thing bad about Scancat, it doesn't do Multisite systems like Freescan or Proscan or ARC XT etc. I personally like Scan Cat but it is NOT useful for me with the 396XT since it doesn't allow me to setup my scanner the way I want. I use ARC XT. I have used the others and they are all good. Test them out and see which you like best since they all have free trials and Freescan is Free.

Is there a comparison of the different software programs available. I am using FreeScan and find it very good for a free program. I have download Butel ARC XT Pro but haven't spent enough time to determine the benefits of it over FreeScan. It would be nice to have a chart that outlines the features of Butel ARC XT, ARC XT Pro, FreeScan, and ProScan showing what is common and different between each.

I am new to the 396XT trunking and digital scanning. Having this comparison would be helpful. I am still trying to understand the trunking and getting it to scan those systems. That is a separate topic though maybe a better understanding of the software options would help.

Yes - you can scroll to that system and press the L/O button or go
through the menu and unlock it that way (or via software).

I have Arc XT and ProScan, and they both use Radio Reference to get their frequencies.

There is a taxi company in Englewood NJ that I have used, and I would like to listen to
the dispatcher. I haven't found his frequency anywhere. So a few weeks ago I was over
on Palisade Ave and I took a walk over there, and asked if I could look at his radio, and
he actually allowed it! It was covered by a taped up piece of black garbage bag, but he

took it off, I guess because I have been friendly to him in the past and a good customer.
He told me with great authority that he had channel 1 or channel 2. Anyway I couldn't
find any frequencies, and being afraid to disrupt his setup too much and get him upset,
I gave up. I have searched FCC licenses for Englewood NJ and still not found this taxi
company, but found others which I tried but no success.

Ok well.. if other scan programs use databases other than Radio Reference then that would
be a good reason to try them.

Hi Joe,

Thanks so much!

That scanner> computer wire is quite useful.

I made the choice to get the handheld model but use it at home
mostly, because it is easy to flip all over the place.. any opinions
of this? The 396 vs the 996?

Matthew

Yes - you can scroll to that system and press the L/O button or go
through the menu and unlock it that way (or via software).

You've got a 396 - use Close Call to capture the frequency (and
tone/code if any is used).

Well, the 996 has more powerful audio, and you don't have to worry about cells going bad/dead.

But, you can use an external speaker with the 396 to get the audio back up there (computer speakers are great for this, although I use amplified Motorola speakers personally), and you can leave the NiMH/Alk switch on Alk to save the batteries.

But, overall I think the 396 is a smart choice if you ever want to use it portable. There is also the advantage of using it when the power goes out. You need extra equipment for the 996 to do that.

There is also the benefit of the 996 having dedicated, separate volume and squelch knobs. That can be handy sometimes.

Two choices:

1. Enable all ranges. You are sure to get a hit on them if you're on site (and their transmitter is as well - as you MAY have only seen a remote control for their transmitter). Did it have only telephone lines coming out of it or was there round coaxial cable. OR, is their antenna on-site?

2. Likely they are on the VHF, UHF, or 800 MHz band. You could only enable those ranges if you like.

When Close Call is active, use the 1-7 keys to enable/disable ranges.

From: Matthew Kurzon
Topic: 4390 Message: 4424

Joe, Thanks for this list, Going over it..

A dedicated squelch is nice, but in practice, squelch +2 is
perfect for all my signals.

What I am most interested in is your comment about the
audio..

I can hear my radio quite well, the volume never needs to
be anywhere near the maximum..

Why would you need better audio with a scanner radio?

Btw I do use the power adapter to save on batteries..

(I noticed early on that the rechargables are just a nuisance,
so it's either regular batteries or the adapter.)

Thanks,

Matthew

Subject: Re: [BCD396XT] stop scanning CB

Well, the 996 has more powerful audio, and you don't have to worry about
cells going bad/dead.

But, you can use an external speaker with the 396 to get the audio back
up there (computer speakers are great for this, although I use amplified
Motorola speakers personally), and you can leave the NiMH/Alk switch on
Alk to save the batteries.

But, overall I think the 396 is a smart choice if you ever want to use
it portable. There is also the advantage of using it when the power goes
out. You need extra equipment for the 996 to do that.

There is also the benefit of the 996 having dedicated, separate volume
and squelch knobs. That can be handy sometimes.

It is in my case, too, but sometimes it's nice to bump it up a notch or two.

Road noise in a car is the most often complaint.

I would look into NiMH cells. Using them can save you a lot of money in
the long run (and there is the whole 'save the planet' aspect, too).

Ok admittedly, I need to learn simple things like using Close Call.

Now I have the solution, I'll go from here to get the taxi co frequency,

Thank you!

Hi Joe,

Sorry I didn't see this email.

It was a small box, I wish I had known to look for external connections but I did not. The box was only about 7" x 8" x 5" (height). Old equipment, what an old, large table top microphone! Which doesn't mean the crystals couldn't be switched easily. I didn't see an antenna on the roof, but they are hitting cars locally easily, which is their goal.

What is the best place to read about searching ranges as you described, the PDF or the online manual?

Thanks so much for your attention to this,

Matthew

Subject: Re: [BCD396XT] Is This a Good Deal?

Two choices:

1. Enable all ranges. You are sure to get a hit on them if you're on site (and their transmitter is as well - as you MAY have only seen a remote control for their transmitter). Did it have only telephone lines coming out of it or was there round coaxial cable. OR, is their antenna on-site?

2. Likely they are on the VHF, UHF, or 800 MHz band. You could only enable those ranges if you like.

When Close Call is active, use the 1-7 keys to enable/disable ranges.

Before trying any research, I would try Close Call. If you don't get a hit from their base, you may from a car just entering or leaving.

If you can find one frequency, the others will be much easier.

4430. Re: [BCD396XT] taxi co freq

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-29 22:34:29 UTC
From: Matthew Kurzon
Topic: 4405 Message: 4430

I found that I can easily search any range I want using ProScan
to start the range. Now I need to figure out what frequencies
taxi companies are using around here. I once found a page of them.

By the way, I'm getting a lot a false close calls, continuous signals,
and stuff that my radio decides to look for while I'm searching say 800+
it will look also on the standard FM band!

Thanks for your help,

Matthew

From: Matthew Kurzon
Topic: 4405 Message: 4431

How is this for a search? Start at suspected frequency bottom= 152.000,
then slowly hand scroll up the frequency steps looking for a signal....
With Hold on.

Either 152 or 452, source:

http://www.angelfire.com/wi/scanner/taxicabs.html

So far, two Spanish and one English speaking company located, the latter before
locating the above frequencies. The English speaking company was while rapid
searching using Close Call something above 400 MHz, but a car not dispatch.

4432. RE: [BCD396XT] taxi co freq

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-07-30 11:17:19 UTC
From: Clayton
Topic: 4405 Message: 4432

You may want to check out the “Broadcast Screen” settings. It will allow you to block FM, common pager, and TV freqs, as well as set up custom ranges to block.

ProScan is definitely head & shoulders above the others when it comes to searching, logging, and recording. You may be overwhelmed, however, by results if you are just looking for one particular user. If you see antennas on the cabs, that will give you a big clue as to what band they are using, narrowing your starting point. If they don’t have their own license, they may be using a SMR system (LTR, Passport, etc.)

If can be near the Taxi co’s cars and/or headquarters for a bit, you should get a close call hit that will make it easier. If they are in a very high RF environment, it might be a little tougher and you may need to be closer.

Happy hunting!

Clayton

To: BCD396XT@yahoogroups.com
Subject: Re: [BCD396XT] taxi co freq

I found that I can easily search any range I want using ProScan
to start the range. Now I need to figure out what frequencies
taxi companies are using around here. I once found a page of them.

By the way, I'm getting a lot a false close calls, continuous signals,
and stuff that my radio decides to look for while I'm searching say 800+
it will look also on the standard FM band!

Thanks for your help,

Matthew

Subject: Re: [BCD396XT] taxi co freq

Before trying any research, I would try Close Call. If you don't get a
hit from their base, you may from a car just entering or leaving.

If you can find one frequency, the others will be much easier.

From: Matthew Kurzon
Topic: 4405 Message: 4433

got it 152.27 base, 157.53 mobile... finally!

something other than police i like listening to

From: Matthew Kurzon <mattjiva@...>
To: BCD396XT@yahoogroups.com
Sent: Thu, July 29, 2010 7:18:37 PM
Subject: Re: [BCD396XT] taxi co freq

How is this for a search? Start at suspected frequency bottom= 152.000,
then slowly hand scroll up the frequency steps looking for a signal....
With Hold on.

Either 152 or 452, source:

http://www.angelfire.com/wi/scanner/taxicabs.html

So far, two Spanish and one English speaking company located, the latter before
locating the above frequencies. The English speaking company was while rapid
searching using Close Call something above 400 MHz, but a car not dispatch.

And it's easy to search using Freescan. Why all the plugs about how you can use proscan?

Length of antenna? If it is an assigned TAXI channel it may be split by 5 mhz. The mobiles cannot hear each other. That is so that they cannot jump calls.

Seems a little different to listen to TAXI dispatchers. Jumping calls could cause a problem.

I was using Freescan but had issues that was costing time and money.
I switched to Proscan and never looked back. Best move I made and well work 50 bucks. The features are amazing.

I found the taxi frequencies this morning, I'm ecstatic! Thanks to an online posting of taxi frequencies:

http://www.angelfire.com/wi/scanner/taxicabs.html

Still, the transmissions are so sporadic that I couldn't get it last night. But finally, this morning, success!!!!!

About ProScan, I'm truly sorry it sounds like plugs, but I'm genuinely enthusiastic, you can write to me directly if you wish. I am not the author, I bought the thing, I am just a user. I look at it like this: I love my radio, and I think ProScan makes it a lot better. That's all. I got started (recently)
with a Radio Shack scanner, but getting on RR read about the 396/996 radios. When I read about their capabilities, I decided to purchase one, and chose the handheld, just to make it easier to manipulate. My fiance said "Will Radio Shack take back the other radio?" But I kept it, and I'm glad I did. Two scanners
are much superior to one. Although ProScan (sorry!) allows for reception of multiple channels at once! But being the dummy that I am, I don't know how to do it. So for now, I use 2 radios and an RR Live Audio Feed. Besides, how many things can you listen to at once?

Subject: [BCD396XT] Re: taxi co freq

And it's easy to search using Freescan. Why all the plugs about how you can use proscan?

Length of antenna? If it is an assigned TAXI channel it may be split by 5 mhz. The mobiles cannot hear each other. That is so that they cannot jump calls.

Seems a little different to listen to TAXI dispatchers. Jumping calls could cause a problem.

I think there was also a setting that will allow it to set off the tones
if the 1050 Hz audio tone is tx'd also? maybe mistaken, but may make
sure that is off too?

It uses the 1050 Hz tone for Weather Priority. For the SAME mode, I
think it only uses the SAME data.

Thanks Lucretius3, I bought the case right away.

Anyone get the new antenna from Uniden? I should be getting
it, it is somewhere in NY, addressed to me at work but didn't get it
yet.. who knows how they addressed it..

Joe,

There was a waiting list for the antenna, which costs a whopping 10.99.

I got on the waiting list and now the antenna has been sent to me at my office, which is building with a guard at all times. I got the message from USPS that they delivered it or tried to, not sure, but it didn't get to my room. I think it will turn up soon.

Anyway for 10.99 I wonder how great it can be. I am already using an antenna from Radio Shack which is telescoping, and immediately improved reception.

If you look at the Uniden site you should see the new antenna there.

If not, I will look at my emails and get you the part number tomorrow; I need to go to sleep now! Writing to me directly is fine if you wish to do so.

4447. BCProgTool.TCL for cross platform XT Operation and Minimal Programming Support

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-02 14:01:24 UTC
From: Keith
Topic: 4447 Message: 4447

For TCL/TK software cross platform support. Works and designed for Mac OS X, Unix, Linux, Windows 98+ and any other platform that supports TCL/TK software serial port communications.

Comments from users:
Works great!
Worst piece of S**T out there!

Exactly "where" do you need better reception, home, car o just on the scanner? How do you use it, what system(s) and so foth are you trrying to monitor. Knowing more info we may be able to help you get a better antenna for your situation.

John

Subject:[BCD396XT] BCProgTool.TCL for cross platform XT Operation and MinimalProgramming Support

For TCL/TK software cross platform support. Works and designed for Mac OS X, Unix, Linux, Windows 98+ and any other platform that supports TCL/TK software serial port communications.

Comments from users:
Works great!
Worst piece of S**T out there!

Exactly "where" do you need better reception, home, car o just on the
scanner? How do you use it, what system(s) and so foth are you trrying to
monitor. Knowing more info we may be able to help you get a better antenna
for your situation.

Subject: Re: [BCD396XT] Antenna, was: Re: Scanner Case?

I bought it because they made it sound like it was a new design--
forget it!!! It is just the same old original antenna that came with
the radio..... my Radio Shack scanner antenna gets better reception..
I'm still considering a powered antenna, but afraid of too much noise.

Is this a replacement antenna you are talking about (did you lose the
original?)
? Or is this a new design?

Best,
L.

I would think that the answer is yes, if you look on the Uniden website, you can look at the power adapter for the bcd396xt, it will probably list the bdc396t (is my guess). If you want to compare the specs on the adapters, mine is part no AD1001, output 6V 800 MA... there is more, but that should be enough.. see if the connector fits...

From: Richard Victor
Topic: 4455 Message: 4456

Assuming that it's a normal rebanded system--On the General Tab of the Site screen choose "Custom" for "Mot. Bandplan" and then click on "Edit Mot. Bandplan" and enter *BOTH* of the bandplans shown in the "General" section of the following:

http://wiki.radioreference.com/index.php/Software_Support_for_Uniden_Rebanding

You may be tempted to think about those bandplans and decide to enter only one or to modify them. Don't--just enter BOTH of them as they are.

Technically, they can be, but you will never hear them, as the scanner
will only use them to search for control channel data.

If you want to hear them, Conventional frequencies have to be in a
Conventional system.

I have a conventional system and trunked system both programmed to the same quick key because Jacksonville FL Fire/Rescue simulcasts their dispatches on a UHF frequency while all of their operational comms happen on their digital trunked system. I also have a conventional system programmed on a separate quick key for all of the other stuff around here. I have the JFRD UHF frequency there as well but I like it better having it programmed as a conventional system assigned to the same quick key as the trunked system. Works nice for me. Hope this gives you some insight.

From: Richard Victor
Topic: 4464 Message: 4465

If by preprogram you mean the systems that were on the scanner when
you purchased it, those on the t may be well out of date at this point
and you'd probably be better off just getting a premium subscription to
RadioReference and downloading the current info for those systems and
saving yourself a lot of hassle. If you meant something else, feel free
to ignore this paragraph. :)

In either case, FreeScan would be a good choice and it's free.

If you're going to transfer trunked systems from the t to the xt, keep
in mind that the xt supports multiple sites and the t doesn't, so you
may have to make some
adjustments for proper programming.

4466. 396XT and Remote Head, but...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-07 19:16:19 UTC
From: shelleysh1@att.net
Topic: 4466 Message: 4466

Hi all,
This may be an easy question, but then again it may not be. I've used a remote head first with my 396T then my 396XT in my car since it was released. No problem with it - I love it! Now I want to use a second remote head in a different way - at home, using AC power. Hmmm

I seem to remember (and as much as I hate it, I don't remember things as well as I used to!) that there is a way to hook up AC power to the remote head. But, I can't remember how to do it! The specs for the remote head show the input voltage as 13.8 Vdc (11.0 - 16.6Vdc). So what would I use for AC power going to the remote head? I'm anything but savvy at things like this (obviously!). LOL

Help please!

Thanks,

Shell

You need to obtain a 12 VDC power supply, with about 1/2 amp or so capacity, to provide power to the remote head. This would be used to convert the 120 VAC from the wall outlet to 12 VDC that the remote head operates on.

Try Radio Shack for a universal adapater or power convertor. It needs to provide around 12 volts with equal to or more than 500 milliamps.

You can connect the power convertor up the same way that you would when it is used in the vehicle. Make sure that you correctly observe the DC polarity.

As always this list is a wealth of information, thank you both!! While I know a great deal about radios, I know little about "things electrical" and, if I can help it, would prefer not to. I'll give Radio Shack a try first and will also order the Uniden adapter to keep as a backup.

Thanks again and appreciate the quick replies! The remote head is still one of my favorite pieces of equipment Uniden has produced and I've found a use for one here.

Hi Matthew,
A remote head unit is a unit which provides complete control, including volume and squelch, for several of the Uniden scanners. It also has a larger screen. It (obviously) connects to the scanner and can be placed conveniently pretty much wherever one wants it. Most often one uses it in their car or truck, which is what I've done for the past several years and continue to do so. I have another one (actually two) and want to use them at home and at work. It's much easier for me to glance up at the readout on the remote head and see what's going on, where I have it located, than to read it on my 396XTs. I have always preferred the 396XTs for several reasons and thus have made sure I purchased a remote head whenever I bought one.

If you'd like to see what they look like you can do a Google search on the web and several locations will pop up, both showing you what they look like as well as some locations which have them for sale right now. Uniden no longer has them in stock but several of their distributors do.

As I mentioned in my previous post, the remote head really is one of my favorite items Uniden has produced! I particularly like it in the car because where I have it located, it's much safer. I have it mounted on the dashboard, all the way forward, just slightly below my line of sight. So if a call comes in I can lower my eyes just slightly, to see what it is, and still be able to watch the road.

Hope that gives you some info on the Uniden Remote Head. There's a lot more on sites like Scannermaster and others.

Hi Shell,

Thanks! I am using ProScan, which is a programming software for the 396xt. It also has
a nice big picture (real time) of the unit as a base station, with working buttons and knobs,
including volume and squelch. I don't always plug in and use this thing, because the radio
is just fine as a scanner the way it is.

I am interested in looking into the remote head you are talking about, if you can give me a little
more info I can use to look it up.

Thanks,

Matthew

Hi Matthew,
Actually, all of the software programs (FreeSCAN, ARC and ProScan) for the 396XT (and several other scanners) have the Digital picture on the computer screen. Some of them are more sophisticated than others in what you can do with them. I have and actually use all three because there are certain features on each one which I like better than the others.

I use the remote head in the car so I don't have to take my eyes off the road if something is going on and I want to see what department it is. At home and at the office I might not be next to the radio, but if I have the remote head hooked up I can glance over to the bookshelf next to my desk and see who it is. I cannot see the readout on the radio from that distance and I do not run the software on my computer - that's for work, not for the scanner software. So the remote head fits my needs perfectly.

You can read all about it on the Scannermaster website:

http://www.scannermaster.com/Uniden_Bearcat_BC_RH96_Remote_Head_p/10-691108.htm

Again, many thanks to Mike Martin and pdejonck!

I went by Radio Shack this afternoon and less than 5 minutes later I left with the proper AC power supply for the remote head. Appreciate your help - it was exactly what I needed!

Hi Shell,

It is a very beautiful piece of equipment, no doubt!!

Thanks for the information.. I am going to save it and possibly one day purchase
this very nice equipment!

Wonderful, many thanks for this..

4475. Proscan Quick keys

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-10 03:20:09 UTC
From: Brad Magee
Topic: 4475 Message: 4475

I have the bcd396xt and subscribe to proscan.problem is that on another software that I use I can seperate groups by assigning quik keys.I prefer using proscan but I click on quik key nothing happens.I can program systems into the 396xt but they are scattered throuout and cannot be grouped together or turned on or off.If anyone has an old radio then you know how you used banks to organize systems.If I could get the q keys to work I could do this without erasing everything,or maybe not.Anyway any help would be appreciated...Thanks

4476. Re: [BCD396XT] Proscan Quick keys

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-10 18:10:22 UTC
From: Richard Victor
Topic: 4475 Message: 4476

System Quick Keys (SQKs) should be set on the ProScan System page for conventional systems and on the ProScan Site page for trunked systems. Group Quick Keys (GQKs) are set on the ProScan Group page for both types of systems. SQKs and GQKs should then be transferred to the scanner by uploading at least those systems which have been changed or which contain groups which have been changed. You can have up to 100 SQKs and each system can have up to 10 GQKs. There can be more than one system or site assigned to a SQK and more than one group assigned to a GQK. Searches and Services can also have SQKs so they are really System/Search/Service Quick Keys, but usually referred to as merely SQKs.

The ProScan Quick Keys / Search Keys tab provides a means of setting the state of the SQKs and the GQKs following the transfer of new configuration data to the scanner. It doesn't change the assignment of the quick keys, merely their initial state. It, too, needs to be uploaded to the scanner (as part of the configuration) in order to take effect.

When you're using ProScan's virtual scanner display to operate your scanner you can turn systems and groups on and off just as you would on the scanner itself by clicking on the same keys as you would press on the scanner. In other words, if you want to activate the system to which you have assigned SQK #1, you would click on the #1 key. For two digit SQKs you need to click on the [. / No] key and then the two digits. For example, for SQK #24 you would click on the [. / NO] key and then the #2 key and then the #4 key. To turn a group on or off, you click on the [FUNC] key and then the GQK number while scanning the system which contains that group.

The display

S0:1234--7**0 indicates that SQKs 1, 2, 3, 4, 7, and 0 are active; SQKs 8 and 9 are inactive; and SQKs 5 and 6 are unassigned.

S1:12---678** indicates that SQKs 11, 12, 16, 17, and 18 are active; SQKs 19 and 10 are inactive; and SQKs13, 14, and 15 are unassigned.

Etc. to S9:12345678790

Hope this is helpful.

Dick

As Dewey said, no. You can split a GPS to use on two scanners, but you cannot combine a GPS with a two-way device such as the RH.

Does the BCD396XT or the T have the PL Tone lockout feature ?
I have gone thru the Menu settings and don't see that feature but some 3rd party software seems to have it in menus.
Both FreeSCAN and ARCXT have a Tone LO column but it doesn't seem to lockout the PL I have entered.

I know the 396XT has it and I'm pretty sure the 396T has it as well.

The CTCSS/CDCSS options are under audio settings. Set it for analog
only, then "Set Lockout", then select CTCSS/CDCSS, then set the
tone/code you don't want to hear.

Hey Joe,

Nice to hear from you.

I have to find that serial port wire. I put it somewhere when I got the
USB wire, thinking it was useless.

By the way, what is the use of it anyway?

What is the use of what? The Remote Head?

Typically, when you are dealing with compact places in vehicles, there
may not be enough room to mount a mobile scanner. The RH allows the
scanner to be mounted remotely and the much smaller head will control
the scanner and mimick the display.

4485. How do i find ...?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-12 02:07:07 UTC
From: Robert Mace
Topic: 4485 Message: 4485

Hello all,

I just got my scanner today and went to the Uniden web site to register it...and they are asking for the ESN ?

Which must be an "electronic serial number" but where is it located ?....
I can not find it any place...The scanner has a serial number on the back side above the battery door.

But this "ESN" must be someplace that i have not looked at.

Thanks for any help on this.

Robert Mace

Menu button
SETTINGS
SEE SCANNER INFO
FIRMWARE VERSION

You will also find the Checksum there.
These are all the last items in each menu.

I thought registration of a Uniden scanner stopped with the 396t, the "XT" did not need to be registered for the latest firmware change.....

Thanks, Mark! Beautiful job!
Guys, download doPDF off the internet. It installs as one of your printers. When you want to make a PDF, you hit "Ctrl + P", pick your destination, and go for it. Mark's entire XT manual came out to 78 pages.

Good Job Mark. You may want to look over this section for the serial port:

Set Serial Port allows you to set the baud rate for the front and rear serial ports. You typically set the front port to match the speed used to communicate with your PC (default 115200 bps) and the back port to the speed used to communicate with an attached GPS device (default 4800 bps). Note that the back port is male. You may need a gender changer and a null modem adapter to use a typical DB9 serial cable from the rear port.

Scroll to 'Set Serial Port' and press E/yes.
Scroll to Off, 9600, 19200, 38400, 57600, or 115200 and press E/yes to save and exit.

The serial port has a 4800 speed & the 396xt has no rear port.

It cannot be both. Either it's an original Motorola system or it is a
Rebanded system. Why are you saying it's both? Also, a RadioReference
URL would help identify what it is.

Of course it may well be a Motorola system which has been rebanded
making it a rebanded Motorola system and that may have confused the OP.
Since rebanded and Motorola describe two different aspects of the system
they aren't mutually exclusive.

If the OP could tell us whether he's programming manually or with
software (which program) in addition to the RR URL as you've requested,
we could be more helpful in providing specifics.

Basically true, but Motorola and Rebanded are pretty much exclusive -
much like a System cannot be Motorola and P25 even if it's a P25 system
made by Motorola.

Of course, the only true "Rebanded" systems types will only refer to
Analog Motorola Systems. Other system types (EDACS, LTR, P25, and
Conventional) are really the exact same systems just programmed with
different frequencies.

4507. programming via the key pad

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-20 04:40:53 UTC
From: Mike
Topic: 4490 Message: 4507

I usually use software to program my 396XT but there are occasions when I'm in the field away from a computer and

I need to make some programming adjustments, such as changing a quick key assignment or a lock out setting, via the key pad . I have a few question about programing this way:

-is there a way to easily navigate to a system for programming purposes other than pressing MENU and then scrolling through all the system to get to the one you're looking for?

-can you navigate to a system for programing purposes by using the number tags?

-for a multi site trunk system, is it possible to simultaneously set the lock out or quick key setting for all of the sites on that system at once or does it have to be done one site at a time?

Thanks,
Mike

All,

Well, finally figured out that my AC strip on my bench had been accidently turned off. Thus I was not really on AC power when plugged into the charger.

Interesting tho I never did find the manual saying specifically that when loaded with alkalines and plugged into the charger that one was running on AC and saving batts.

Guess they assumed I knew that without asking!

Can you tell I am a detail person? Smile.

John

While scanning Press hold so the scanner is in "HOLD" mode on line 1, press Func, turn scroll knob to the system you want to edit. Then press Menu Key, while reverse "F" appears on line 1. If reverse "F" does not appear on line 1 press Func -> Menu

> -can you navigate to a system for programing purposes by using the
> number tags?

You can navigate to the system with Number tags and hen press Func -> Menu
IE 1.11 -> Menu -> Func -> Menu

If you ever want to navigate a "single" CNV frequency or TGID stop on the Freq or TGID then press EYes key

4510. 396XT Battery Question - When on charger

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-19 16:36:57 UTC
From: n0evh
Topic: 4510 Message: 4510

I know this is somewhere in the manual....but I can't find it yet.

I usually run alkalines in the unit. When at home I plug it into the charger. I have the switch set for alkalines.

When plugged into the charger like this, is the unit saving the batteries and running on the charger?

Thanks, John

4511. Kudos and Question

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-22 00:51:15 UTC
From: Jeffry Rehm
Topic: 4511 Message: 4511

I want to again thank Mark for all his hard work on the easier to read manual for the 396XT. Great job.

Now the question. With the ease of reading through the manual I noticed something that I have never seen before. Under the heading of To Edit Trunking Systems Options there is a sub heading of P25 NAC Option (P25-1Tr only). I do not find this option anywhere on my 396. After the Set Audio AGC in my setting's it scrolls back to the beginning. I even checked the preprogrammed P25 systems and can not find the NAC setting anywhere.

I would love to use it and set it correctly but unless I can find it I can't use it. Anyone want to help me out with it?

Who knows I may have more questions in the future.

If you create a new system, select "P25" as the system type, then select "One - Freq Trunk", you can then access that setting under the "Edit Sys Option" menu. If you select "Standard Trunk" rather than "One - Freq Trunk", that setting will not be presented as an option.

So if you have a 20,30 or more channel system with multiple (possible) control channels, you don't have that option to chose from?
If so, why not?

As I understand it, a one frequency system isn't really trunking, but rather a single frequency system in which the NAC and the TGID are used to permit or deny access to particular users of that frequency. In the case of a multi-frequency system, the controller assigns a particular conversation to a frequency which is accessed based on the TGID and, I believe, not normally on the NAC.

In other words, I don't think it's needed on the multi-frequency trunked system.

If I've got it wrong, I'm sure someone will jump in.

Ahhh That makes sense now. Even after a year of messing with this scanner I am still learning .... ahem .... stuff. Even the easier to read manual takes a little deciphering. I was confused because the NAC stuff was included with the trunking system adjustments.

Thanks again.

The Multi-function knob on the top of the scanner came off the other day, and now its loose. Meaning it slides up and off without too much effort...

Any ideas on making it stick? Anyone have this happen to them?

Too many Airshows...

Thanks.

Is it under warranty ? If so return it for repair or if the plastic knob is damaged and not the stem, order a new knob.

I had that happen with my 396 a little drop of super glue should do the trick. Remember just a little drop if you have one of the super glue pens that would work best.

Try some super glue or Loctite on it, I use Loctite for many small
failures like the one you have?

Hope that helps,
Walter

Ahhh Locktite. Good call.

Will it still allow me to remove the knob if the unit needs service? I think the seal it creates is breakable...

Thanks.

As long as you just put a VERY small amount, and just in a small "dot" about 0.5 mm "drop" of it and only on one spot, not all the way around the shaft the knob goes on. There should not be much of a need to remove the knob later unless you plan to make mods?

The shaft the knob goes on is not a movable part, I have used it on most of my radios in very small quantities and never had a problem. But I use Loctite now, since you can get various strengths, you can remove the items you "glue" on if you need to.

I would NOT use any kind of glue whatsoever... you are asking for trouble.
But i would use instead is "plumbers teflon tape" ...It has no glues or sticky, but will cling tightly to the shaft, you can use enough tape to make the shaft bigger or larger enough to make the knob fit snugly.

It's a cheap way to fix it...but the VERY BEST cure would be to just order a new

knob and be done with it.

According to Uniden's customer service, the knob costs $.25 + shipping, with an approximate three-week back-order. Call 800-297-1023 & press "4" twice.

A spam to tell us how you fight spam? How ironic.

4531. Intermittent pauses

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-08-25 17:59:47 UTC
From: mhopkins735
Topic: 4531 Message: 4531

During a continuous transmission, the scanner pauses (no audio) every 4 seconds or so for 1 to 2 seconds, then picks up the transmission again. This happens in all scan modes except weather. It's acting similar to an older scanner that would stop every few seconds in a priority mode to check the priority channels, but I can't find any priority channels activated in my 396XT. Any ideas??

From: Lance Star
Topic: 4534 Message: 4534

I noticed on my 396XT that when I plug in an external speaker. The audio is not significantly louder than the internal speaker. Is there some design change in the audio to prevent hearing damage through ear buds, or do I have an issue with the audio output via the ext. jack on this radio?

Thanks.

A search of this issue seems to be that the headphone jack is for
headphones, not a speaker. Probably an
amplified speaker might do the job.

And how many things do you "improvise" when you try to pull a "McGyver"? Although Duct tape was made for a specific purpose, how many people use it for just what it was made for? I have used Loctite on thermoplastics for over 20 years, it never harmed any of them! Amazing how many people wait until someone makes a post, then goes to a website or Wiki just to pick apart someones email, I didn't see any of you offering suggestions for a fix when I was trying to help, Hmmmm, sounds like a CB bunch!

First, that is actually S0 (s-zero) for the first set of to System Quick Keys (SQKs). The next set will show S1, then S2 and so on. S0 shows the status of SQKs 00-09.

I suspect you don't have any SQKs programmed in your Systems which is why it's not showing any as active. Try programming some SQKs.

From: MICHAEL BENNETT
Topic: 4558 Message: 4558

I program the frequency in twice, one with the PL and the other with the NAC. You could program once and leave it open but I've found this is an invitation to a lot of interference depending on the radio signal saturation in your area.

4559. BCD396XT Scanning Operation

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-09-20 00:06:40 UTC
From: skycom291980
Topic: 4559 Message: 4559

Group,

Please help me with some feedback on the scanning operation of this radio. I have everything set at default values and programmed my scanner with 5 conventional frequencies and starcom21 for district 11, 12, 13 illinois state police. To me it seems that when i select all the towers in my area i miss alot or to me it takes to long to go through all the sites to pick up the trunking systems. I use to have a PSR-600 and i never noticed anything like this on that scanner and it seemed to go through all the sites pretty fast but it seems different on this scanner. Can i please get some help or feedback on the best way to make the scanning the fastest. I travel around alot in southern ilinois and use about 75 percent of the towers in southern illinois. I had like 12 sites programmed in my PSR600 and it worked great but it just doesnt seem to operate as good on this scanner. I eventually took out all the sites in my scaner except 2 of them and its alot better but i need alot more tower sites than that due to my traveling area.

Thanks

Dean Meredith

With the StarCom site check to make sure your "hold time" isn't set way too high. Most people have the time set at 0 or 1.

Group,

Please help me with some feedback on the scanning operation of this radio. I have everything set at default values and programmed my scanner with 5 conventional frequencies and starcom21 for district 11, 12, 13 illinois state police. To me it seems that when i select all the towers in my area i miss alot or to me it takes to long to go through all the sites to pick up the trunking systems. I use to have a PSR-600 and i never noticed anything like this on that scanner and it seemed to go through all the sites pretty fast but it seems different on this scanner. Can i please get some help or feedback on the best way to make the scanning the fastest. I travel around alot in southern ilinois and use about 75 percent of the towers in southern illinois. I had like 12 sites programmed in my PSR600 and it worked great but it just doesnt seem to operate as good on this scanner. I eventually took out all the sites in my scaner except 2 of them and its alot better but i need alot more tower sites than that due to my traveling area.

Thanks

Dean Meredith

If I'm not mistaken, the 600 could be set up to scan all sites all the time, or to "Roam" - using only the single site with generally the best signal.

Di you have all your sites programmed in the same System, just programmed as separate Sites, or do you have each site programmed as a separate System? You should have the former, not the latter.

Also make sure you only have the control channels for each site programmed in each Site (note the caps use here - Site is a scanner item, while site is a generic term for location).

How many sites are within range at the times you are talking about? You should only have two or three within range. Sites that have no activity should be scanned and complete within a few milliseconds.

Your best solution would be to use a GPS and enable that on each site. That way you will only ever have two or three scanned at any given time.

You can also program each Site with a different SQK (System Quick Key) and enable/disable them manually as you travel.

The 600 has an option to "roam" or not, but with some systems it's best not to use roam. Systems such as STARCOM though should work well with roam on. At times I wish Uniden had a similar feature.

From: Keith
Topic: 4562 Message: 4564

You need to program in the frequencies and the band plan for the trunked system. The band plan allows the scanner to follow the system.

I will give you an example for an XT scanner

<http://www.radioreference.com/apps/db/?action=siteInfo&siteId=17341>
Custom Frequency Tables
Base Spacing Offset
406.0000 12.5 380

You would add this system like this in the XT:
Band Plan > Custom > Band Plan 1 > Set Base Freq
Input Lower 406.0000 > Eyes key
Input Upper 420.0000 > EYes key
Set Offset > 380 > polarity + > EYes key
Set Spacing > 12.50kHz > EYes key

System Frequencies
406.61250c 406.81250c 407.05000c 408.01250c 409.41250 409.81250

From: Brian
Topic: 4566 Message: 4566

Latest News
20/09/2010 - bcTool+ Released!

bcTool+ has been released. This is a complete ground-up rewrite of bcTool which brings support for
all of Uniden's latest models, massive improvements to performance, speed, stability and usability
over original bcTool. Be aware that this release is very new and may have glitches and if you find
anything unusual please just let me know!

Please also note that this website is now quite out of date - screenshots are for the old version,
and although the look and feel are not significantly different, it is not identical. The site and
documentation will be updated over the next few days.

Works with all DMA-based Uniden Bearcat scanners, including the BC246T, SC230, BR330T, UBC3500XLT,
BCT15, BCD396T, UBC800XLT and BCD996T - all using one free application!
Latest Release: 2.0 (20th of September, 2010)

I have a crazy question in reference to this. What if you do not know what the band plan is for the system that you want to monitor. For example there is a site not to far from me that is in the 406mhz range and the only frequency I know is the control channel, plus it changes from time to time. Just wondering how do you go about this?

Thanks,

Joey

Rob finished BCTool and it's now available at: http://www.bctool.org/index.php
He had to do a fix for the XT's but that took care of the issue and I have it up and running. He should have the fix up momentarily.

John

You're out of luck.

There are programs that may help you determine the bandplan. Or at least
Excel sheets that will help find them. Did you check RadioReference?

Joe,

Thanks for responding. Yes I have checked radio reference and it is not listed there. I will do some research on this and see what I can come up with. I was thinking if you plug program in just the control channel the radio could take the information from it and be able to trunk the system. That is how I have a couple of the 800mhz towers around me and it seems to work fine. Maybe it is different. Oh well off to learn more.

Thanks,

Joey

Just an fyi, not a complaint, I know new programs have glitches. When connecting to the scanner it get to 6% and freezes. Thanks for all of your efforts:) (do you need more info?)

Latest News

20/09/2010 - bcTool+ Released!

bcTool+ has been released. This is a complete ground-up rewrite of bcTool which brings support for

all of Uniden's latest models, massive improvements to performance, speed, stability and usability

over original bcTool. Be aware that this release is very new and may have glitches and if you find

anything unusual please just let me know!

Please also note that this website is now quite out of date - screenshots are for the old version,

and although the look and feel are not significantly different, it is not identical. The site and

documentation will be updated over the next few days.

Works with all DMA-based Uniden Bearcat scanners, including the BC246T, SC230, BR330T, UBC3500XLT,

BCT15, BCD396T, UBC800XLT and BCD996T - all using one free application!

Latest Release: 2.0 (20th of September, 2010)

Please, Trim Your Posts! on the Yahoogroups.

No need to read the same stuff over and over.
Just go back and look at the past "bcTool+ Released!" posts.

MCH you can trim some of the last emails better.

Thanks!

4577. quick keys

I have just received a bcd396xt scanner and previously had a GRE500.
On the GRE500 I was able to have a favorite list so when our fire dept. went out I could just hit the fav button on the scanner and it would just broadcast these frequencies, instead of all the different counties.
I would like some instructions on assigning keys to lock out counties that I don't want to listen to and also assign quick keys to just listen to our fire depts.
I could upload the file that I have created if that would help.
I am going through PA. this weekend and would like to get this scanner set up before then.
Thanks,
Dave Turner

4580. RE: [BCD396XT] uhf trunking

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-09-22 12:08:04 UTC
From: Clayton
Topic: 4562 Message: 4580

If it's a true P25 system, all that's needed are the control channels. If it's a type 2 Motorola with digital or analog voice, then the bandplan must be programmed. There are some common plans that provide a good starting place.

Clayton

Latest News

20/09/2010 - bcTool+ Released!

bcTool+ has been released. This is a complete ground-up rewrite of bcTool which brings support for

all of Uniden's latest models, massive improvements to performance, speed, stability and usability

over original bcTool. Be aware that this release is very new and may have glitches and if you find

anything unusual please just let me know!

Please also note that this website is now quite out of date - screenshots are for the old version,

and although the look and feel are not significantly different, it is not identical. The site and

documentation will be updated over the next few days.

Works with all DMA-based Uniden Bearcat scanners, including the BC246T,
SC230, BR330T, UBC3500XLT,

BCT15, BCD396T, UBC800XLT and BCD996T - all using one free application!

Latest Release: 2.0 (20th of September, 2010)

Topic: 4577 Message: 4583

Just create a new local system tailored to your need, assign it to a SQK, then "HOLD" on the hold button for a beep and it will scan only that SQK...I have my local PD-FD in three different SQK's each different to my needs...396XT=one EXCELLENT scanner.....

4584. Re: [BCD396XT] Re: quick keys

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-09-22 20:57:46 UTC
From: Richard Victor
Topic: 4577 Message: 4584

Since one can assign more than one system or site to a particular SQK, it may be worth noting that a long press of the "Hold" key results in a System Hold which will cause the scanner to remain on a single system or, in the case of a trunked system, a single site rather than a single SQK. The display will show "HOLD" flashing to indicate that it's a System Hold rather than a Scan Hold (single channel). A second long press of the "Hold" key will release the System Hold.

If you press the Function key while in System Hold, you can use the Scroll Knob to change the system or site on which you're holding.

4585. BCD396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-09-28 02:18:32 UTC
From: Derek Helling
Topic: 4466 Message: 4585

I have decided to buy a Home Patrol and, to help finance the new purchase, I intend to sell my 396XT. I have never really enjoyed the 396xt because it is much smarter than me, which I find intimidating and humiliating. I look forward to listening instead of messing with the countless controls.
Does anyone know what a 396xt in good condition sells for?

You can buy them brand new on fleabay for $505 and upwards (plus shipping) but it all depends on how old your XT is, the condition it's in, has it only been used indoors or has it been mobile (dust, vibration, temperatures, sunlight etc.), whether it comes in the original box with all the original accessories etc. etc.?

In the end it comes down to what you want for it versus what people will pay? I personally would not pay more than $400 and even then it would have to be "as new" and still under warranty?

4591. Audio level differences...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-01 18:14:36 UTC
From: milcom_chaser
Topic: 4591 Message: 4591

I was scanning some conventional public service frequencies with close call in DND mode. I noticed when close call came across a local PD frequency, it's audio level was much louder than the same one programmed into the radio within a group. I have not check the AGC level settings, but wondered if anyone else has noticed this as well?

4592. Re: [BCD396XT] Audio level differences...

Since most band defaults in the scanner are NFM, I'd suspect that the service is transmitting FM and you have the channel programmed correctly as FM. But, on a Close Call hit, FM will overmodulate NFM demodulation and result in the audio being much louder.

Ok, sounds like Close Call is following the band default mappings when in Auto mode for demodulation.

What are the deviation settings in this radio for:

NFM

FM

FMB

I have not looked to see if these are in the specification section yet.

Thanks UPMan!

I have not looked to see if these are in the specification section yet.

Thanks UPMan!

Subject: Re: [BCD396XT] Audio level differences...

Since most band defaults in the scanner are NFM, I'd suspect that the service is

transmitting FM and you have the channel programmed correctly as FM. But, on a Close Call hit, FM will overmodulate NFM demodulation and result in the audio being much louder.

Subject: [BCD396XT] Audio level differences...

I was scanning some conventional public service frequencies with close call in DND mode. I noticed when close call came across a local PD frequency, it's audio

level was much louder than the same one programmed into the radio within a group. I have not check the AGC level settings, but wondered if anyone else has noticed this as well?

That would be a cool feature to add in the next software rev. So, when u hit the keys it takes u to the DCS number you want within the list...

Thanks UPMan. This radio continues to prove itself awesome...

From: enriqueeeeee2001
Topic: 4598 Message: 4598

Hello group,

I would be interested in buying a 396xt handheld, I live in Spain but I do not know if it can work on digital modes, I will give it a try indeed.

I f you have one for sale just mail me. Thank you very much

Best Regards.

If you set the menu for the freqy in question to PL/DCS "SEARCH" when the proper setting pops up monitoring the freqy just press "E" and it goes right in.....

4600. Copying a freqy from a system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-02 20:33:15 UTC
From: dataman60435
Topic: 4600 Message: 4600

When i hold and press "E" on a conv- freqy and scroll the menu to "copy freqy" it says the freqy is in a "buffer", i cannot find in the manual on line what you do after that to get the freqy to another System's group??...How do you get the "paste" part of the operation??..Thanks for any help....

4601. Re: Audio level differences...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-03 17:00:40 UTC
From: w2gld
Topic: 4591 Message: 4601

UPMan,
Please clarify some information; the link you provided states the following:

NFMThe scanner treats the frequency as Narrowband FM modulation (about 7.5 kHz deviation; also referred to as SNFM in some references).FMThe scanner treats the frequency as FM modulation (about 15 kHz deviation; also referred to as NFM in some references).WFMThe scanner treats the frequency as Wideband FM modulation (over 100 kHz deviation; used for pre-digital conversion TV broadcast reception and similar).FMBThe scanner treats the frequency as FM broadcast modulation (about 75 kHz deviation; used for FM radio station reception and similar).
From a communications perspective, should the following be true?
"FM" should be 5 kHz maximum deviation, with a channel spacing of 15, 20, or 25 kHz.
"NFM" should be 2.5 kHz maximum deviation, with a channel spacing of 6.25, 7.5, or 12.5 kHz.
This setting for most is very ambiguous and has little documentation from Uniden. For whatever reason, Uniden has taken the standpoint that almost all VHF, UHF, and SHF traffic should be "NFM" when it follows the "AUTO" setting. Can you please explain why this is; other than future FCC licenses will require this setting?
Would it be safe to assume that if a Project-25 (Conventional or Trunking System) uses 12.5 kHz channel spacing then the setting should ALWAYS be "NFM"
And if this is true, should Project-16 (Conventional or Trunking Systems) that use 25.0 kHz channel spacing, should the setting ALWAYS be "FM"
What I have found in researching the individual FCC licenses for many agencies is that the emissions designator indicates the appropriate bandwidth of a frequency and does not always follow the Uniden "AUTO" setting.
For example, the "New Jersey State Police" use a Motorola Type II SmartZone trunked radio system within the 800 MHz band. Their licenses indicate 20K emissions designator, thus a setting of "FM" would be appropriate in my opinion to allow for the extra bandwidth. The Uniden scanners always default this to NFM under the "AUTO" setting and this usually makes the audio horrible to listen to. This case is exactly the same for the City of Philadelphia's system; which is "full digital - APCO-25 audio" With the default "NFM" setting, this system is almost useless to monitor; however, if one changes the setting to "FM" the system track fine with little issues.
Another example is the "Burlington County, NJ", which is also a Motorola Type II SmartZone system. Their bandplan indicates 12.5 kHz channel spacing, thus the audio should be "NFM" correct?

By the explanation in the link you've provided, most communication would in fact remain "FM" and not the default "AUTO" setting or "NFM".
If I am understanding the text correctly, ONLY the "SUPER-Narrowband" frequencies such as VHF 7.5 kHz and UHF 6.25 kHz should use the setting of "NFM", is this a true statement from what Uniden engineers have designed???
To summarize, when should one use the "NFM" setting vs. the "FM" setting for general public safety use? Is the "NFM" setting on for the "SUPER-Narrowband" frequencies, such as those licensed for 7.5 kHz on VHF and 6.25 kHz on UHF ONLY?
If you could please elaborate on this topic, I am sure many of us would appreciate it.
Thank you for all your support here on the groups and RadioReference!
Regards,
Jerry - W2GLD

4602. Re: [BCD396XT] Copying a freqy from a system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-04 15:41:49 UTC
From: MCH
Topic: 4600 Message: 4602

Not sure if this was answered yet or not. A sort on my email client
isn't showing any replies.

Go to the Group you want to copy it to, select EDIT CHANNEL, then PASTE
CHANNEL which will be the last option on the list.

Joe M.

4603. Re: [BCD396XT] Re: Audio level differences...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-04 16:03:03 UTC
From: MCH
Topic: 4591 Message: 4603

Uniden mode / Common designation / Deviation / Bandwidth
NFM SNFM 2.5 kHz 11.0 kHz
FM NBFM 5.0 kHz 16.0 kHz
WFM Wide FM 25.0 kHz 100.0 kHz (or 90.0)
FMB Wide FM 75.0 kHz 200.0 kHz (or 190.0)

Channel spacing is a different issue, and while there are minimum limits for the wider modes, any channel spacing can be used with any mode. For example, SNFM can be used with 25 kHz channel spacing, or 20, or 15, or 12.5, or even 7.5 or 6.25 even though that is technically unsound.

But, if you have something operating on 6.25 or 7.5 kHz channels, it is most likely SNFM.

WFM is for TV, and FMB is for the "FM" radio band (88-108 MHz).

Paul, if the quoted text is accurate, please update the specs.

Topic: 4591 Message: 4604

Joe,

From what I see here then, the following should be true:

508.9875 with an emission designator of 11K should be NFM

508.6500 with an emission designator of 20K should be FM

Is this a true statement???

[Non-text portions of this message have been removed]

4605. I have a BCD396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-04 19:57:21 UTC
From: coaster1robertgraphics
Topic: 4605 Message: 4605

I notice ever since I started using the scanner the digital transmission is louder then the analog trunk system,is there anything I can do about that,so they both sound the same.

4606. Re: [BCD396XT] Re: Audio level differences...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-05 01:43:47 UTC
From: MCH
Topic: 4591 Message: 4606

The first one definitely should be NFM.

The second one is likely FM, but it could legally be used for or converted to a NFM system.

The emission designations are maximum allowed bandwidth, not necessarily exact figures. So, a licensee for a 20K0 bandwidth channel (20.0 kHz to put it in non-FCC-eeze) could be used for an 11K0 signal.

The rest of the emission designator will put other restrictions on the licensee, too, but they don't apply to what we are talking about.

On second look, the .6500 channel is a splinter channel, and I didn't think there were any licenses that wide (20K0) issued on T-band splinter channels. Or were your examples hypothetical?

Joe M.

From: Lance Star
Topic: 4591 Message: 4608

Thats cool.

My question was merely from a manual entry of the PL/DCS perspective...

4609. Re: [BCD396XT] Re: Audio level differences...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-05 06:43:55 UTC
From: Lance Star
Topic: 4591 Message: 4609

Perhaps all the VHF HI band PS systems in my radio will need to be globally changed to FM mode. Since I don't have any 6.25khz allocated freqs. In fact I have yet to come across any...

For everything else, there's programming software. Would be interested to hear Paul's response to this topic's last thread. Perhaps the default band plan setting for modulation should be FM for this radio...

It doesn't have Close Call.

(It does have its own discussion forums, though, at http://www.homepatrol.com/).

Eventually, most channels will be NFM. In fact, it's required of most
services (but not all) by 2013 and many are changing over now.

You likely have several NFM channels in your area already.

I have around 10% NFMs in my area. Well, maybe that many.

Even if they are on traditional frequencies, they may be using NFM
rather than FM, or may be soon.

4613. Re: BCProgTool.TCL for cross platform XT Operation and MinimalProgramming Support

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-17 02:58:39 UTC
From: warpedspeed
Topic: 4449 Message: 4613

Throwing my $0.02 in for the record.

I just received my BC396XT this weekend.
I had not purchased a scanner since I bought a TrunkTracker II ten years ago. However I do have a good handle on trunking technologies and methodologies, re-banding, P25 IMBE, etc...
I have had my hands on some of the newer scanners over the last decade to play with.
I knew that wrapping my hands around DMA would probably be my biggest challenge. I was wrong. BCPROGTOOL was my biggest challenge.

I does work, but with limitations.
Once I understood those limitations, I was off and running.
The first and hardest lessens are that it will NOT reliably create Trunk Systems and Sites. Your best bet is to do that on the scanner. You can let the scanner use the default number/name combinations when you create those items, and then use BCPROGTOOL to edit them.

If you try to perform these tasks with the software, you will receive a variety of error messages along the lines of unable to create, but in less understandable syntax than that.

One thing to watch out for at all times with this software, is that the program will "stall" for lack of a better word. I always kept the main panel of the program off to the side, so that I could see if the message appeared in the status line at the bottom of the panel indicated that it needed to "restart". There is a Restart button on the BCPROGTOOL keypad so that you can easily re-initialize the connection. This is different that using "Connect" to initially connect to the scanner. If the program stalls while in one of the other editing screens, you will not be able to write your changes to the scanner, and the program may freeze. So make sure that you check the status of the main panel before performing any actions against the scanner.

Once the Systems and Sites are initialized in the scanner, then most everything works as expected. Of course, the best way to load Talk Groups is with a data file. In fact, there is a bug there with the Talk Groups too. You are supposed to be able to past information from a table into the program. That part initially appears to work, and then you can choose which columns of data are valid and assign the appropriate data types to the appropriate columns. It really looks promising when you get this far... However when you tell it to import, the program just gives a "blank stare". Nothing is imported.

What you can do, is manually created a Group or two, and then manually populate the Group(s) with just a few Talk Groups. Make sure that you set all of the options that you might want for each Talk Group, including screen colors. Next, "Download from Radio" in the "Program Radio" menu. This will create backups of all of the Systems in the scanner. At least one of the files that will be backed up will be a new .CSV file, with the name of the Group(s) that you created as part of the file name. This is your template. Now you can cut and paste from what ever frequency sources that you have, creating your own group configurations in that file, using the editor of your choice.

Next, go back to edit the System of interest in BCPROGTOOL. In the Talk Group screen, there is a button that allows you to load / import a file. Choose the file that you manually edited and then you will see it populate your Talk Group information in the Group tables.

This will get you going. Most other things work as advertised.
It is safe to say that I got what I paid for, and spent some time figuring this stuff out. But I also now have a scanner that just arrived about 24 hours ago, fully setup with multiple trunked systems, analog and P25, and a conventional system. I have some more Systems to setup, but from here it will be relatively easy.
I found time to do this while dealing with the normal weekend tasks of yard work, vehicle repair, family time, a few hours sleep, etc...

73,

Dean

4615. ARC-XT Copying Systems

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-17 08:45:08 UTC
From: schs448
Topic: 4615 Message: 4615

I have the demo version of ARC-XT awaiting arrival of my bcd396XT.

I have manually added a Motorola System (UHF Type 2) with multiple sites, but when I attempt to copy the system, all of the Custom Trunking Parameters disappear in the new system. They are also missing if I try and copy a site within the original system.

Is this a limitation of the demo version, or am I doing something wrong.

Also is there a way of applying Trunking parameters (frequency, offset, etc.) to multiple sites without punching it in to each individual site?

I've searched here, but can't seem to find an answer

Thanks

Throwing my $0.02 in for the record.

I just received my BC396XT this weekend.
I had not purchased a scanner since I bought a TrunkTracker II ten years ago.
However I do have a good handle on trunking technologies and methodologies,
re-banding, P25 IMBE, etc... I have had my hands on some of the newer scanners
over the last decade to play with.

I knew that wrapping my hands around DMA would probably be my biggest challenge.
I was wrong. BCPROGTOOL was my biggest challenge.

I does work, but with limitations.
Once I understood those limitations, I was off and running.
The first and hardest lessens are that it will NOT reliably create Trunk Systems
and Sites. Your best bet is to do that on the scanner. You can let the scanner
use the default number/name combinations when you create those items, and then
use BCPROGTOOL to edit them.

If you try to perform these tasks with the software, you will receive a variety
of error messages along the lines of unable to create, but in less
understandable syntax than that.

One thing to watch out for at all times with this software, is that the program
will "stall" for lack of a better word. I always kept the main panel of the
program off to the side, so that I could see if the message appeared in the
status line at the bottom of the panel indicated that it needed to "restart".
There is a Restart button on the BCPROGTOOL keypad so that you can easily
re-initialize the connection. This is different that using "Connect" to
initially connect to the scanner. If the program stalls while in one of the
other editing screens, you will not be able to write your changes to the
scanner, and the program may freeze. So make sure that you check the status of
the main panel before performing any actions against the scanner.

Once the Systems and Sites are initialized in the scanner, then most everything
works as expected. Of course, the best way to load Talk Groups is with a data
file. In fact, there is a bug there with the Talk Groups too. You are supposed

to be able to past information from a table into the program. That part initially appears to work, and then you can choose which columns of data are valid and assign the appropriate data types to the appropriate columns. It really looks promising when you get this far... However when you tell it to import, the program just gives a "blank stare". Nothing is imported.

What you can do, is manually created a Group or two, and then manually populate the Group(s) with just a few Talk Groups. Make sure that you set all of the options that you might want for each Talk Group, including screen colors. Next, "Download from Radio" in the "Program Radio" menu. This will create backups of all of the Systems in the scanner. At least one of the files that will be backed up will be a new .CSV file, with the name of the Group(s) that you created as part of the file name. This is your template. Now you can cut and paste from what ever frequency sources that you have, creating your own group configurations in that file, using the editor of your choice.

Next, go back to edit the System of interest in BCPROGTOOL. In the Talk Group screen, there is a button that allows you to load / import a file. Choose the file that you manually edited and then you will see it populate your Talk Group information in the Group tables.

This will get you going. Most other things work as advertised.
It is safe to say that I got what I paid for, and spent some time figuring this stuff out. But I also now have a scanner that just arrived about 24 hours ago, fully setup with multiple trunked systems, analog and P25, and a conventional system. I have some more Systems to setup, but from here it will be relatively easy.

I found time to do this while dealing with the normal weekend tasks of yard work, vehicle repair, family time, a few hours sleep, etc...

73,

Dean

FreeScan doesn't cost money and works well. If you need the
additional features, ProScan also works well and is, in my opinion, well
worth the money. Many people are very pleased with ARC-XT.

BCTool+ has recently been released and now includes support for the
latest scanners. When last I checked the author was quickly resolving
various bugs that are inherent in most new software. Don't know if he's
gotten them all resolved as yet or not. It now has a paid version and a
crippleware free version.

I haven't tried BCPROGTOOL, but it appears that one of its big
advantages is the cross platform support for those that need or want it.

YMMV

i noticed that arc xt pro has some nice new features,
and proscan is fantastic in it's super complex abilities,
yet it can simply program a bcd396xt as well

so can arc xt; i like having both of these.. and having
a lifetime membership is nice (both)

question for ymmv, dick:

this is simpleminded ok, but does cross platform=
across different operating systems?

thanks for your write up analyzing the various software
programs by the way..

matthew

Matthew,

Yes, that's what I meant by cross platform. That would be a major advantage of BCPROGTOOL for some users if all else were equal. BCTool+ claims to work under WINE on Linux and *BSD.

I know that some have successfully run FreeScan on Macs running Windows. The same may be true of ProScan and ARC-XT, but I don't recall.

The advantage of FreeScan, ProScan and ARC-XT, it seems to me, is that they've been around awhile and have therefore had most of the bugs resolved. From the original post in this thread it appears that BCPROGTOOL may not have yet reached that stage and BCTool+ was still ironing out some issues within the last few weeks when I was following its development more closely than I am now.

The one thing that one can say for sure about the various programs is that each person has different criteria by which they evaluate how well a program meets his/her needs so it's really a good idea to try as many as you can to find what's best for you.

Hi, What computer OS platform did you work the program on?
Did you use the Uniden USB-1 or a Prolific USB Adaptor?
There is a problem with the prolific/USB-1 adaptor with Mac, but I didn't
have any problems with Windows and Linux with those adaptors using the
program when I wrote it.

Your feedback is greatly appreciated.

Some good interesting feedback occuring here.

I should have initially indicated that I apreciate Keith's efforts to provide a multi platform GPL application for the XT units.
I know that there are other propriatary Windows alternatives, even free ones, but I try to use open applications when I can.
My main PC at home runs Linux as the primary OS, but it also has Windows support as needed. By using BCPROGTOOL, I do not need to litter that PC with another Windows app.

BCPROGTOOL is still a little rough around the edges. That is why I share my experience with others, so that there is knowledge of some of the current quirks, and methods to work around them.
I will be sharing some additional information with Keith regarding the issues that I encountered. Hopefully that will lead to additional improvements in the program.

> >
> > One thing to watch out for at all times with this software, is that the program will "stall" for lack of a better word. I always kept the main panel of the program off to the side, so that I could see if the message appeared in the status line at the bottom of the panel indicated that it needed to "restart". There is a Restart button on the BCPROGTOOL keypad so that you can easily re-initialize the connection. This is different that using "Connect" to initially connect to the scanner. If the program stalls while in one of the other editing screens, you will not be able to write your changes to the scanner, and the program may freeze. So make sure that you check the status of the main panel before performing any actions against the scanner.
> >
> > Once the Systems and Sites are initialized in the scanner, then most everything works as expected. Of course, the best way to load Talk Groups is with a data file. In fact, there is a bug there with the Talk Groups too. You are supposed to be able to past information from a table into the program. That part initially appears to work, and then you can choose which columns of data are valid and assign the appropriate data types to the appropriate columns. It really looks promising when you get this far... However when you tell it to import, the program just gives a "blank stare". Nothing is imported.
> >
> > What you can do, is manually created a Group or two, and then manually populate the Group(s) with just a few Talk Groups. Make sure that you set all of the options that you might want for each Talk Group, including screen colors. Next, "Download from Radio" in the "Program Radio" menu. This will create backups of all of the Systems in the scanner. At least one of the files that will be backed up will be a new .CSV file, with the name of the Group(s) that you created as part of the file name. This is your template. Now you can cut and paste from what ever frequency sources that you have, creating your own group configurations in that file, using the editor of your choice.
> >
> > Next, go back to edit the System of interest in BCPROGTOOL. In the Talk Group screen, there is a button that allows you to load / import a file. Choose the file that you manually edited and then you will see it populate your Talk Group information in the Group tables.

4622. Re: [BCD396XT] Re: BCProgTool.TCL for cross platform XT Operation and MinimalProgramming Support

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-18 18:20:33 UTC
From: Matthew Kurzon
Topic: 4449 Message: 4622

Dick,

I can think of a few advantages of ProScan: it can run multiple stations from one radio, and it can stream your reception out to a friend over the internet. These stand out to me; since I just upgraded Arc XT to Pro I don't know if it can do either of these but the list doesn't stop with those. I am happy with ProScan but since I started with Arc XT and since it gives a different way of looking at the same basic situation, programming frequencies into the radio, I like to keep it up to date as well. Amazing features like the ones I mentioned above, and more I'm sure other people can state about ProScan if they wish to, can possibly not be found anywhere else. Arc XT does have a "virtual radio" now, a live radio on the computer screen which does have an advantage: it shows the frequency of the station broadcasting. I would like to see that in ProScan! The radio, of course, does not show it. (Anyone care to prove me wrong?)

Subject: Re: [BCD396XT] Re: BCProgTool.TCL for cross platform XT Operation and MinimalProgramming Support

Matthew,

Yes, that's what I meant by cross platform. That would be a major advantage of BCPROGTOOL for some users if all else were equal. BCTool+ claims to work under WINE on Linux and *BSD.

I know that some have successfully run FreeScan on Macs running Windows. The same may be true of ProScan and ARC-XT, but I don't recall.

The advantage of FreeScan, ProScan and ARC-XT, it seems to me, is that they've been around awhile and have therefore had most of the bugs resolved. From the original post in this thread it appears that BCPROGTOOL may not have yet reached that stage and BCTool+ was still ironing out some issues within the last few weeks when I was following its development more closely than I am now.

The one thing that one can say for sure about the various programs is that each person has different criteria by which they evaluate how well a program meets his/her needs so it's really a good idea to try as many

as you can to find what's best for you.

I responded about 8 hours ago.
Hopefully this one makes it to the group.
I spent a while typing that last one too... on my phone...
Oh well, to sum it up;
Thanks to Keith Wyatt for putting in the effort on this.

I prefer to use multi-platform GPL applications, not proprietary Windows apps. If there were no alternatives, then I could run one of the Windows apps, but I prefer not to litter my PC with too many of those.

BCProgTool is still a little rough around the edges, but it is getting there. All part of the process.
Hopefully the information that I shared will help someone else if they are challenged by it. I suspect that as Keith works with it, it will become an easier app to use.

I have shared some additional information with him regarding the issues that I encountered.

Dean

I have to wonder... WHY would someone call a program BCPROGTOOL when there is an existing scanner program called BCTOOL? It seems very confusing to me.

> One thing to watch out for at all times with this software, is that the program will "stall" for lack of a better word. I always kept the main panel of the program off to the side, so that I could see if the message appeared in the status line at the bottom of the panel indicated that it needed to "restart". There is a Restart button on the BCPROGTOOL keypad so that you can easily re-initialize the connection. This is different that using "Connect" to initially connect to the scanner. If the program stalls while in one of the other editing screens, you will not be able to write your changes to the scanner, and the program may freeze. So make sure that you check the status of the main panel before performing any actions against the scanner.

Ok Let me explain. By design the software will stop the reading of the
comport radios status when you go into program system, talk groups or
system edit mode.
This is to prevent the problems you encountered with programming the radio
that would not program in the system reliably. When you finish or exit the
program screen mode the radio should restart the comport status display on
the main screen, if not THEN you press the restart key.

While the radio is being polled by the comport you would send your
programming commands to the radio and the inputting of the programmed
information can lead to a comport lockup or misreading of the command
response. Instead of receiving a OK,BLAH,BLAH the program receives
STS,BLAH,BLAH.

To prevent the problem don't have the software polling the serial port
while attempting to program the radio, which is the default setting in the
software. If you have several TK widgets displayed and poll the radios
comport it causes the computer to slow down or hang also.

This is a limitation of the TK software, but with other scanner control
programs you will notice the same problems of hanging when polling the
comport for status display updates and programming or moving around a

program window while polling the radio's comport.

I agree, not good thinking since BCTool by Rob has been around for years.
The author may want to consider a new name for this one.

John

4627. Re: [BCD396XT] Re: BCProgTool.TCL for cross platform XT Operation and MinimalProgramming Support

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-19 17:05:23 UTC
From: Matthew Kurzon
Topic: 4449 Message: 4627

I will need help in answering this but I'm pretty sure that you
can put up more than one station on your computer using
ProScan.

From: Richard Victor <victor@...>
To: mattjiva@yahoo.com
Sent: Tue, October 19, 2010 12:40:58 PM
Subject: Re: [BCD396XT] Re: BCProgTool.TCL for cross platform XT Operation and
MinimalProgramming Support

  I'm not sure what you mean by ProScan can "run multiple stations from
one radio."

I've registered ProScan and ARC-XT and have contributed to FreeScan, but
I'm not too enthused about ARC-XT and generally haven't been using it.
I find the authors of ProScan and FreeScan much more receptive to
suggestions where my experience with Butel is that he's not as
interested in suggestions and is more defensive. I'm sure that others
would see it differently. I was using FreeScan to manage my database
for programming the radio and ProScan for the operation of the radio,
logging, and recording. Over time I find that I'm now using ProScan
almost exclusively for everything. One big advantage of FreeScan,
particularly for a new user, is that it's widely used and therefore
makes a good format in which to get a database from some else or to send
yours to someone else.

I particularly like the fact that I can use ProScan to record just
certain channels which was a feature that the author added some time ago
at my request.

BTW, in display mode 1, the radio displays the frequency on trunked
channels and on display mode 2 it displays the frequency on conventional
channels. There doesn't appear to be a setting that does both.
However, the log in ProScan shows the frequency in either case.

Matthew, what version of ProScan are you using that doesn't have a virtual display on the computer screen???

Even the *free* ProScan client has the virtual display, everything that's on the scanner display is on the computer screen verbatim.

And the big advantage is that ProScan displays this all the time, not just when you open a separate window for the virtual display!

I was a big ARC fan myself until maybe six months ago, I had taken a brief look at ProScan in the past but it wasn't until I got sick of purchasing a new version of ARC every time I updated scanners that I took a serious look at ProScan and after using it for a while now I won't be going back to ARC software (just my personal opinion).

Andrew,

I didn't say or imply that ProScan has no virtual display, I only mentioned that Arc XT finally caught up, at least in the Pro version.

Sorry for the confusion. ProScan has a beautiful radio on the computer screen; a request would be to have it display the frequency of the station you are listening to.

Matthew, that's not an issue with ProScan, it will only show whatever is on the scanner display, if you want to see the frequency try changing the display mode on the scanner (Func + 6)?

I think you're looking for mode 2 which displays the frequency on the third line?

Andrew,

My mistake entirely. I don't know what I had wrong previously but it's working now.

Thanks for bringing this up again.

I stand fully but happily corrected, because I really like seeing the frequencies
on the ProScan display!

4632. Identifying a newly formed digital system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-21 16:19:27 UTC
From: Alex
Topic: 4632 Message: 4632

A local radio system just recently switched from analog voice to some type of trunked digital system. It's P25 encoded audio and I'm able to hear it on the old analog channel. The XT also shows me that there's sometimes link data on the frequency (by the LNK indicator). But, what I don't know is the new setup of the system.

What's the best way to go about figuring out the new system and how it's trunking? I tried creating a few new systems in the XT of various types (P25 Standard Trunking, P25 Single Frequency, and Motorola) and then programmed in that one frequency but it may not be the control channel.

Have you checked RR to see if the new information for that system is there?

Try looking it up on the FCC licensing system to see what frequencies are used http://wireless2.fcc.gov/UlsApp/UlsSearch/searchAdvanced.jsp

If the audio is P25 encoded, then the choices are limited to either a Motorola Type II system or a P25 Trunked system.

Where are you/what system is it?

I tried searching there but no license comes up for the one frequency (171 MHz) in California although I don't know what address is being used for the licensee to narrow my search.

Yes, it is not there. The change is only a few days old. The system is on http://www.radioreference.com/apps/db/?ctid=201 as JPL.

4641. Looking for tutorial/online help

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-21 19:48:54 UTC
From: N2DUP@aol.com
Topic: 4641 Message: 4641

I'm a long-time GRE user and have many GRE radios, but just recently picked up a BC396XT and am struggling to learn how this thing works and getting it programmed.

Is there a very intuitive online site that helps you under stand the quick keys and all that? I picked up the 396 so I could learn Uniden's radios, but I'm really having fits learning it having been in the GRE world for so long. If you know of any website that helps understand this radio, especially in conjunction with programming by software, please include some links.

Also, what program would you recommend using for the 396? I've tried a few of the free ones and am not sure I like how they work. I'm willing to pay as much as I need to in order to find a program that makes programming the radio a cinch, letting me see everything programmed in the radio with ease. The free programs seem to take so long to upload and download, a much different experience than I have had with the programs for the GRE scanners. Please don't recommend the free programs as I am ready to move on to paying for the best program possible for this radio.

I'm not certain that they're trunked but once in a while I think I end up missing part of a conversation which, presumably, would mean a trunking system. I don't know what frequency the control channel is sitting on. That was one of my original questions regarding identification of the system. I can get the voice on their old analog frequency and the XT does indicate link data from time to time but I'm having trouble finding the control channel if there is one.

I don't know if P25 conventional has ID codes but I do see ID codes for the various radios when the scanner hits one of the test truncking configurations I put in (again, I put in a P25 Single Frequency Trunk, P25 Standard Trunk, and a Motorola system).

I certainly recognize you from the GRE yahoo groups

I have a 396 XT and you are correct it's much different from my GRE 600 both operation and programming

My experience for software is different from yours

I paid for one and hated it..

I only use Freescan now and it doesn't seem to take any longer than the PSREdit software for me, but it certainly is different in setup and operation.

The hard part is getting used to the SQK (System Quick Keys) vs Scan Lists for the GRE

It might be helpful if you asked more specific questions.

I printed off a manual (sent to Kinkos and had printed) and that helped a lot.let me see if I can find which one it was.

This was asked at the preview party and the answer we got was NO. The 2 GiG card is as large as the device will support.

Its an SD card, not SDHC, and SD will only go up to 2 GIG. Anything above 2G is considered SDHC and that is not supported by the unit.

Unless its changed since the initial unveiling. LOL

4646. Re: [BCD396XT] Re: Identifying a newly formed digital system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-21 21:13:13 UTC
From: MCH
Topic: 4632 Message: 4646

P25 has NACs, Talkgroups, and Radio IDs
whether it's a Trunked OR Conventional setup.

Joe M.

Alex wrote:
> I'm not certain that they're trunked but once in a while I think I end up missing part of a conversation which, presumably, would mean a trunking system. I don't know what frequency the control channel is sitting on. That was one of my original questions regarding identification of the system. I can get the voice on their old analog frequency and the XT does indicate link data from time to time but I'm having trouble finding the control channel if there is one.
>
> I don't know if P25 conventional has ID codes but I do see ID codes for the various radios when the scanner hits one of the test truncking configurations I put in (again, I put in a P25 Single Frequency Trunk, P25 Standard Trunk, and a Motorola system).

The answer I've heard from Uniden was that only the stock card size was guaranteed to work. They would not guarantee anything larger. That does not mean they will not work. I've also heard of some people trying larger sizes with success.

This really belongs here:
<http://groups.yahoo.com/group/HomePatrol/>

4648. Home Patrol vs BCD396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-21 21:29:37 UTC
From: Matthew Kurzon
Topic: 4632 Message: 4648

One final thing (?) about the Home Patrol, although I have the correct radio for this group and glad about that, I was just mentioning to someone yesterday that I wondered how much you can tinker with the database in the Home Patrol vs the BCD396XT, my naiive question is: once you have downloaded your zipcode or geocode's frequencies, are you pretty much stuck with a huge mess of everything conceivable that *might* be broadcasting in your area? Can you alter it at all?

Matthew

Chuck,

Congradulations on purchasing an awesome radio!

Here's a good site so help you understand how to use the radio.

Cris:

I am willing to sit down with an online manual. I don't need to print it out, if you know of one. The online website that Uniden includes on the CD in the box with the radio isn't intuitive to me if you have to keep jumping around pages. If there is a PDF or something, I could handle that.

Thanks and 73, Chuck, N2DUP | scanning1.com | twitter.com/ChuckGysi

The answer I've heard from Uniden was that only the stock card size was
guaranteed to work. They would not guarantee anything larger. That does
not mean they will not work. I've also heard of some people trying
larger sizes with success.

This really belongs here:

4656. Re: [BCD396XT] Re: Identifying a newly formed digital system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-21 22:59:05 UTC
From: Uniden UPMan
Topic: 4632 Message: 4656

Another example of why it is better to post in a public forum...

I probably skimmed your email and thought that it was a forum post...I tend
to fly past them very quickly when there are so many.

Uniden's answer (as noted by Joe M) is that we only support the 2 GB card. If
you get another one to work (or not), Uniden takes no credit (or blame).

A better place to discuss (in addition to the HomePatrol Yahoo! group) is the
HomePatrol community forums, where you might have read something like what is in
the link, below:
http://www.homepatrol.com/index.php?option=com_fireboard&Itemid=13&func=view&id=1986&catid
=110

Paul, I realize this is the wrong forum, but I sent you a private email and you
didn't reply with a question about the new Home Patrol. The question being can
the 2 GB SD card be replaced with one with more memory? Such as a 16GB card? I
found no information in the owners manual or the HomePatrol.co web site or any
where else. Thank you in advance for your reply.

Are you certain they are trunked? They could be using P25 conventional...

If you are sure they are trunked, what frequency is the control channel data on?

Yep. Definitely not for the advanced user, but excellent for those who
don't know (and don't want to learn) how to program scanners or for
those who travel a lot.

It will get better with age as the RadioReference database is updated, too.

Mathew,I’m playing home patrol,you can if you want only scan police,or ems,or any utilities. you create list,and customize what you want to listen too.

From: Matthew Kurzon
Sent: Thursday, October 21, 2010 5:29 PM
To: BCD396XT@yahoogroups.com
Subject: [BCD396XT] Home Patrol vs BCD396XT

One final thing (?) about the Home Patrol, although I have the correct radio for this group and glad about that, I was just mentioning to someone yesterday that I wondered how much you can tinker with the database in the Home Patrol vs the BCD396XT, my naiive question is: once you have downloaded your zipcode or geocode's frequencies, are you pretty much stuck with a huge mess of everything conceivable that *might* be broadcasting in your area? Can you alter it at all?

Matthew

The answer I've heard from Uniden was that only the stock card size was guaranteed to work. They would not guarantee anything larger. That does not mean they will not work. I've also heard of some people trying larger sizes with success.

This really belongs here:

But a lot of long time scanner users love the HP-1 and some who didn't think
they would get one have. And some are getting more than one.... I just sold
two of my GRE built scanners to get another HP-1.... :)

John

Subject: [BCD396XT] Looking for tutorial/online help

I'm a long-time GRE user and have many GRE radios, but just recently picked up a BC396XT and am struggling to learn how this thing works and getting it programmed.

Is there a very intuitive online site that helps you under stand the quick keys and all that? I picked up the 396 so I could learn Uniden's radios, but I'm really having fits learning it having been in the GRE world for so long. If you know of any website that helps understand this radio, especially in conjunction with programming by software, please include some links.

Also, what program would you recommend using for the 396? I've tried a few of the free ones and am not sure I like how they work. I'm willing to pay as much as I need to in order to find a program that makes programming the radio a cinch, letting me see everything programmed in the radio with ease. The free programs seem to take so long to upload and download, a much different experience than I have had with the programs for the GRE scanners. Please don't recommend the free programs as I am ready to move on to paying for the best program possible for this radio.

Thanks and 73, Chuck, N2DUP | scanning1.com | twitter.com/ChuckGysi

Just jump to the sections you need like quick keys. The rest will follow as you use the radio...

For now I'll have to live with my BCD396XT and BCD996XT, along with several more scanners I have collected over the years. I have recommended it to several friends who have problems programming the DM scanners.

Yep. Definitely not for the advanced user, but excellent for those who
don't know (and don't want to learn) how to program scanners or for
those who travel a lot.

It will get better with age as the RadioReference database is updated, too.

Topic: 4632 Message: 4664

Thanks Paul, Before I emailed you I searched every where I could think of looking for the answer. Radio Reference, Yahoo Groups, and HomePatrol.com. When I checked the site on Saturday the discussion on the post you directed me to hadn't been posted yet.

Subject: Re: [BCD396XT] Re: Identifying a newly formed digital system

Another example of why it is better to post in a public forum...

I probably skimmed your email and thought that it was a forum post...I tend to fly past them very quickly when there are so many.

Uniden's answer (as noted by Joe M) is that we only support the 2 GB card. If you get another one to work (or not), Uniden takes no credit (or blame).

A better place to discuss (in addition to the HomePatrol Yahoo! group) is the HomePatrol community forums, where you might have read something like what is in the link, below:
http://www.homepatrol.com/index.php?option=com_fireboard&Itemid=13&func=view&id=1986&catid=110

Paul, I realize this is the wrong forum, but I sent you a private email and you didn't reply with a question about the new Home Patrol. The question being can the 2 GB SD card be replaced with one with more memory? Such as a 16GB card? I found no information in the owners manual or the HomePatrol.co web site or any where else. Thank you in advance for your reply.

Are you certain they are trunked? They could be using P25 conventional...

If you are sure they are trunked, what frequency is the control channel data on?

From: Michael Hopkins
Topic: 4641 Message: 4665

When I got my 396 I found it VERY difficult to figure out what to do. I found an on line description of the System/Group structure Uniden used which helped, but when I got Freescan it became clear --- strongly recommend FreeScan --- its free, intuitive and helps you to sort out the structure..

Good luck

Michael

Cris:

I am willing to sit down with an online manual. I don't need to print it out, if you know of one. The online website that Uniden includes on the CD in the box with the radio isn't intuitive to me if you have to keep jumping around pages. If there is a PDF or something, I could handle that.

All of the scanner forums are loaded with questions along the lines of "I just spent a fortune on this digital scanner and I have no idea how to use it". I guess somebody is reading them.

> or for
> those who travel a lot.
>

Especially if you're going somewhere that you hardly ever go to (or have never been too).

The set up kind of prods you into giving Radio Reference frequency information that you might have that they don't have already. So yes it should improve.

FWIW, I don't have one of these Home Patrol things but I've been reading about them.

May want to state where you are located. There may be someone in your area that can help or a local area scanner email list.

Also, do you have software and a programming cable for your scanner? Someone may have a local area programming file that can get you started and you could edit to your scanning preference(s).

Here's some links to more info:

Is there a way to use the XT (perhaps in combination with something else) to identify the system especially things like the control channel (if one exists) or system type?

you could use bc-tool+ to identify the system and control channel http://www.bctool.org/index.php you also could go to http://www.radioreference.com look up your state and county all control channels Red (c) are primary control channels | Blue (a) are alternate control channels . so that should get you started. But a lot of long time scanner users love the HP-1 and some who didn't think
they would get one have. And some are getting more than one.... I just sold
two of my GRE built scanners to get another HP-1.... :)

John

And wouldn't you know it - people are *complaining* that the HP is not complex enough for their tastes - and that it doesn't have enough complex programming features!

There are a million degrees of understanding among scannists out there. If anyone thinks there is a perfect scanner for everyone, they are delusional. Any scanner will always be too complicated for some, but not advanced enough for others.

This thread is getting confusing because it got ursurped by the HomePatrol topic but I mentioned before that the system I'm listening to is not in Radio Reference as a digital system (it was analog simplex). Since it just converted to digital only a few days ago there's no identification of the system information yet.

I'll give BC-Tool a shot and see what happens.

Have you tried doing a Search up or down from the frequency you know and see if it stops on another one that displays a "DAT" symbol? Once you find a control channel, then you could use the Pro96Com program to find out more about the system, if it's trunked.

Either way it sounds like you'll have to employ the good old fashioned ways of patience and frequency searching.

I was trying that with both Close Call and a custom search in the vicinity of the one known frequency but no luck yet. The traffic is sporadic. I'll just have to keep trying and see if I can figure it out. The Pro96Com software is probably what I was thinking about when I was trying to figure out how to identify the system.

Fred,

Am I mistaken or did I see you over at the Home Patrol group?

Did you buy a Home Patrol and find that you wanted more programmability?

I'm curious, if you will indulge me.

Thanks,

Matthew

From: warpedspeed
Topic: 4449 Message: 4681

Keith has released a new version of BCProgTool, 0.8.u, that addresses most of the issues that I detailed previously. Specifically, the creation of Systems and Sites, and some editing issues with Talk Groups are now working properly.

The behavior that I described as a "stall" that required a Restart, was normal behavior, as addressed by Keith in a later message. So that is not an issue at all, and I was mistaken in thinking that I had to manually perform a restart. The program handles this automatically and does it well.

73,

Dean

> I had not purchased a scanner since I bought a TrunkTracker II ten years ago. However I do have a good handle on trunking technologies and methodologies, re-banding, P25 IMBE, etc... I have had my hands on some of the newer scanners over the last decade to play with.
> I knew that wrapping my hands around DMA would probably be my biggest challenge. I was wrong. BCPROGTOOL was my biggest challenge.
>
> I does work, but with limitations.
> Once I understood those limitations, I was off and running.
> The first and hardest lessens are that it will NOT reliably create Trunk Systems and Sites. Your best bet is to do that on the scanner. You can let the scanner use the default number/name combinations when you create those items, and then use BCPROGTOOL to edit them.
>
> If you try to perform these tasks with the software, you will receive a variety of error messages along the lines of unable to create, but in less understandable syntax than that.
>
> One thing to watch out for at all times with this software, is that the program will "stall" for lack of a better word. I always kept the main panel of the program off to the side, so that I could see if the message appeared in the status line at the bottom of the panel indicated that it needed to "restart". There is a Restart button on the BCPROGTOOL keypad so that you can easily re-initialize the connection. This is different that using "Connect" to initially connect to the scanner. If the program stalls while in one of the other editing screens, you will not be able to write your changes to the scanner, and the program may freeze. So make sure that you check the status of the main panel before performing any actions against the scanner.
>
> Once the Systems and Sites are initialized in the scanner, then most everything works as expected. Of course, the best way to load Talk Groups is with a data file. In fact, there

is a bug there with the Talk Groups too. You are supposed to be able to past information from a table into the program. That part initially appears to work, and then you can choose which columns of data are valid and assign the appropriate data types to the appropriate columns. It really looks promising when you get this far... However when you tell it to import, the program just gives a "blank stare". Nothing is imported.
>
> What you can do, is manually created a Group or two, and then manually populate the Group(s) with just a few Talk Groups. Make sure that you set all of the options that you might want for each Talk Group, including screen colors. Next, "Download from Radio" in the "Program Radio" menu. This will create backups of all of the Systems in the scanner. At least one of the files that will be backed up will be a new .CSV file, with the name of the Group(s) that you created as part of the file name. This is your template. Now you can cut and paste from what ever frequency sources that you have, creating your own group configurations in that file, using the editor of your choice.
>
> Next, go back to edit the System of interest in BCPROGTOOL. In the Talk Group screen, there is a button that allows you to load / import a file. Choose the file that you manually edited and then you will see it populate your Talk Group information in the Group tables.
>
> This will get you going. Most other things work as advertised.
> It is safe to say that I got what I paid for, and spent some time figuring this stuff out. But I also now have a scanner that just arrived about 24 hours ago, fully setup with multiple trunked systems, analog and P25, and a conventional system. I have some more Systems to setup, but from here it will be relatively easy.

He's not 'trashing' anything, merely pointing out that you can use a
'reduced-functionality' version of BCTool for free or pay for the 'pro'
version.

4690. Re: [BCD396XT] program needed to setup bc396xt

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-25 21:12:48 UTC
From: Richard Victor
Topic: 4678 Message: 4690

I'm not trashing BCTool+. I described the free version as crippleware
which is a common description for software in which some of the features
have been intentionally disabled in order to induce the purchase of a
paid version. This is what it is.

I said nothing about it being buggy although it certainly was when first
released. I don't think it was ever released in a public beta. When
first released it was completely free, although it quickly switched to a
crippleware and paid version even before all the bugs had been
resolved. I have no idea whether there are still bugs or not. I do
know that the author was making a real effort to get all bugs resolved
ASAP from the very first day so I would assume that he has gotten
problems pretty well resolved by now.

I do have a bit of a problem with software that has no true trial period
in which one can evaluate whether all of the features are working unless
you pay to register it. In the case of BCTool+ you can only evaluate
the limited feature set unless you pay. When it made that switch and
there were still a considerable number of unresolved problems, I lost
interest. I suspect that once the bugs are worked out (and perhaps they
have been already) it will be fine software and I may end up purchasing
it at some point. I just didn't feel that I wanted to pay to beta test it.

YMMV.

Dick

Let's be fair here.

The only thing that is missing in the free version is logging and recording. Everything else is the same in both versions, so if you're only interested in programming a scanner, there is no difference between the two versions.

In my experience, "crippleware" makes functions only partially work, or work for a short time. This does not accurately describe bcTool+ in my opinion.

And yes, the author is still resolving issues, and likely will for some time to come as features are added to the program. Like when bcTool was first released, there are updates several times each week - sometimes daily.

4696. Re: [BCD396XT] program needed to setup bc396xt

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-26 00:40:19 UTC
From: Richard Victor
Topic: 4678 Message: 4696

Let's be fair here?

I've got no problem with BCTool+ and posted the link to the specific page that compared the two versions so that people could decide for themselves whether the differences were significant to them. It isn't just logging and recording, but also multiple recording formats, bandscope, RadioReference Premium import, multiple simultaneous scanner support, commercial use, and server feature support when that support is added.

You indicate that crippleware makes functions only partially work, or work for a short time. The free version of BCTool+ lacks multiple recording formats, bandscope, RadioReference Premium import, multiple simultaneous scanner support, commercial use, and server feature support. Logging and recording are available "time limited". I guess it's a matter of opinion, but I think that meets your definition of crippleware.

Unfortunately, there is no way to see if any of the paid-only features work, or work the way you want them to, without paying for the program. Both ARC-XT and ProScan have 30 day full (or nearly full) feature trial versions. It seems to me this is particularly important in the context of a recently released program in which "the author is still resolving issues, and likely will for some time to come...."

Of course, if you have no need of any of the additional features, want to use the program solely to program your scanner, and don't have a RR premium account then there's no reason to pay for the Pro version. But then, of course, there's FreeScan which is free and includes RR import, recording, logging, and has been quite bug free for some time.

As I said, "once the bugs are worked out (and perhaps they have been already) it will be fine software and I may end up purchasing it at some point."

Joe, do you really think my post was unfair?

Dick

the public saftey system here has switched over to the new nextel rebanding program, there control channel used to be in the 868 range, but now there frequencies is in the 853 range along with the control channel, you can hear them in conven. mode, but the 853 range will not trunk there control channel, what is wrong?

Let's be fair here.

The only thing that is missing in the free version is logging and
recording. Everything else is the same in both versions, so if you're
only interested in programming a scanner, there is no difference between
the two versions.

In my experience, "crippleware" makes functions only partially work, or
work for a short time. This does not accurately describe bcTool+ in my
opinion.

And yes, the author is still resolving issues, and likely will for some
time to come as features are added to the program. Like when bcTool was
first released, there are updates several times each week - sometimes daily.

Topic: 4678 Message: 4698

Assuming it's not a P25 or EDACS system (most likely it is not), then
you need to change to (via software) or program a new system in the
scanner of the type 800 CUSTOM and enter the rebanding tables.

Your scanner is still trying to trunk it based on the old system type,
and going to the wrong voice channels.

4699. Re: [BCD396XT] program needed to setup bc396xt

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-26 03:52:12 UTC
From: MCH
Topic: 4678 Message: 4699

I guess the part that really hits a nerve is the term "crippleware". I'm not disabled, but I have friends who are, and that is a very offensive term. It's like calling a piece of software "n-----ware" because it originates from a certain continent, or any other term added to 'ware' that would be appropriate to say in public. Is any term appropriate simply because it's appended with "ware"?

I know that's not your term, Dick, but it was you who used it. I try to not get too personal, and I guess I am guilty of misdirected anger, but trust me it was not you who I was targeting personally.

The software is just being written, and you have a point that a full-featured demo version would be nice. Maybe it will happen, but it's a little early to judge a piece of SW that is still a work in progress - including still having features added. In fact, some of the features you mentioned were not previously even going to be part of bcTool, but were added (er.... make that WILL BE added) simply because it's now possible to cover the costs of the subroutines that the author wants to use. Before, I believe it was planned to be a separate paid program. So, you really cannot compare that to Freeware.

I guess all the SW that supports RR import is guilty, as you need to pay for the ability to do that, and I'm not aware of any demo for that service, so you cannot try that feature on any of the SW packages, either. I'm not talking about the ones that grab the HTML, but the true import/download feature. So, I'm fine with it as long as all SW packages are being "painted with the same brush". In a way, they are all guilty.

So, it's fine to advocate a demo version of software, but let's try to use more PC terms that do not offend segments of the population.

From: larrykoch
Topic: 4678 Message: 4700

The term "crippled" is offensive only when applied to a person. Note definition 2. It is NOT offensive when applied to something other than a person.
If a person thinks the software is impaired or flawed, then it can be said to be crippled and should not be offensive to anyone.

crip·ple
/ˈkrɪpəl/ Show Spelled [krip-uhl] Show IPA noun, verb, -pled, -pling, adjective
–noun
1. Sometimes Offensive .
a. a person or animal that is partially or totally unable to use one or more limbs; a lame or disabled person or animal.
b. a person who is disabled or impaired in any way: a mental cripple.
2. anything that is impaired or flawed.
3. a wounded animal, esp. one shot by a hunter.
4. Carpentry . any structural member shorter than usual, as a stud beneath a window sill.

Well, if it's in a WIKI, I guess that makes it OK.

Dang. The 'n word' is in the same WIKI. I guess it's OK to use that term again. (although in all fairness - yes, there is that phrase again - if some group of people can use it, it should be OK for anyone to use it). Still, there are many places where you will get shot for using it, or sued, or killed, or any combination in any order.

But, let's get back to the XT.

Joe M.

The term is, as pointed out by larrykoch, an accepted and non-offensive word when applied to things other than people, particularly if those things are inanimate objects such as software. As a handicapped individual, I think I'm in a pretty good position to judge such things.

If your objection was to the fact that you considered the term offensive, then I think you should have said that rather than claiming that my take on BCTool+ was unfair. Use of an allegedly offensive term is considerably different from unfairly characterizing software.
> The software is just being written, and you have a point that a
> full-featured demo version would be nice. Maybe it will happen, but it's
> a little early to judge a piece of SW that is still a work in progress -
> including still having features added.
If it's soon enough to ask people to pay for it, I think it's soon enough to have a trial version. I'm not judging the software on the merits except to say that I think it should have a trial version rather than requiring the payment of money to find out whether it works, particularly with all the talk about work in progress, features to be added, and issues to be resolved. I don't think it's unfair to want to know just which features are working correctly before laying out money.
> In fact, some of the features you
> mentioned were not previously even going to be part of bcTool, but were
> added (er.... make that WILL BE added) simply because it's now possible
> to cover the costs of the subroutines that the author wants to use.
> Before, I believe it was planned to be a separate paid program. So, you
> really cannot compare that to Freeware.
I think the history of the features is irrelevant. It's my understanding that all of the listed features are already in the free version except for the server features and that upon payment of the fee one is given a code which unlocks those features. This further supports the assertion that it's cri... "feature-challenged" software. The point is that you can't try them without paying in advance and the free

"feature-challenged" version doesn't have those features to try.
> I guess all the SW that supports RR import is guilty, as you need to pay
> for the ability to do that, and I'm not aware of any demo for that
> service, so you cannot try that feature on any of the SW packages,
> either.
You are comparing apples to oranges. In order to try the import feature
you must have a premium membership regardless of which program you
decide to use. However, once you have that membership, ARC-XT, ProScan,
and FreeScan all allow you to try the software to see how the import
feature works without the payment of any money. BCTool+ does not.
> I'm not talking about the ones that grab the HTML, but the true
> import/download feature. So, I'm fine with it as long as all SW packages
> are being "painted with the same brush". In a way, they are all guilty.
They all require a premium membership because you can't get the data
from RR in the appropriate format without one, but only BCTool+ requires
payment to try the feature in the software.

I'll leave it to others to decide whether crippleware is a legitimate
term when describing "feature-challenged" software. I'll also leave it
to others to decide whether they want to pay money to try the features
of BCTool+.

This will be my last post here and in the BCD396T group as well. Life
is too short ...

73 to all,
Dick

From: vincefireleads
Topic: 4706 Message: 4706

Seeking experienced scanner dispatchers, operators, enthusiasts and personnel to remotely operate scanners and monitor public safety transmissions.

Work details:

☐ Monitor: Listen to transmissions for multiple public safety agencies.

☐ Extraction: Cite relevant information from transmissions to live database.

☐ Research: Use professional resources and tools for thorough and accurate information.

☐ Telecommute: Work from your home office.

Job requirements:

☐ High-speed internet: Bandwidth must be greater than 2.0 Mbps down consistently.

☐ Independence: Must be self-directed and able to work alone.

☐ Experience: Must have knowledge of fire departments and public safety system.

For more information regarding employment and compensation contact:

Vince Rothenberg

Wrong. It is his opinion but I'd like to think that most people agree with Larry.

What a joke the word crippled is now banned from our vocabulary ??? . . . seriously people.
I suppose Cripple Creek Golf Club should change it's name too.
Just like the Atlanta Braves and on and on.

PC is as I say a joke, crippled people don't own the word crippled nor disabled or handicapped, I suppose you can't retard the timing on an engine either or have a golf handicap

Don't call software malware either because you'll affend those who are maladjusted.

Richard-for one thing BCTOOL+ is not cripple ware,feature to feature BCTOOL+ freeware is Equal to $40.00 butel which I used both. butel 40.00 dollar doesn't give you the ability to record,nor dose butel give for free virtual control for free. Butel professional that’s $65.00 gives you virtual control.and recording.
While the free version of BCTOOL+ give to you for free. BCTool has been around for three years is that trial enough for you.and the reason why their paying for the professional version before it goes public ,because of their supporters of the program,they convinced rob 100% to do this.as far I know everyone that’s downloading the program is getting professional version,Rob hasn’t disabled the program yet. The Developer Rob is being generous with his free side of the program. Robert

To: BCD396XT@yahoogroups.com
Subject: Re: [BCD396XT] program needed to setup bc396xt

I'm not trashing BCTool+. I described the free version as crippleware which is a common description for software in which some of the features have been intentionally disabled in order to induce the purchase of a paid version. This is what it is.

I said nothing about it being buggy although it certainly was when first released. I don't think it was ever released in a public beta. When first released it was completely free, although it quickly switched to a crippleware and paid version even before all the bugs had been resolved. I have no idea whether there are still bugs or not. I do know that the author was making a real effort to get all bugs resolved ASAP from the very first day so I would assume that he has gotten problems pretty well resolved by now.

I do have a bit of a problem with software that has no true trial period in which one can evaluate whether all of the features are working unless you pay to register it. In the case of BCTool+ you can only evaluate the limited feature set unless you pay. When it made that switch and there were still a considerable number of unresolved problems, I lost interest. I suspect that once the bugs are worked out (and perhaps they have been already) it will be fine software and I may end up purchasing it at some point. I just didn't feel that I wanted to pay to beta test it.

YMMV.

Wrong. It is his opinion but I'd like to think that most people agree with Larry.

What a joke the word crippled is now banned from our vocabulary ??? . . . seriously people.
I suppose Cripple Creek Golf Club should change it's name too.
Just like the Atlanta Braves and on and on.

PC is as I say a joke, crippled people don't own the word crippled nor disabled or handicapped, I suppose you can't retard the timing on an engine either or have a golf handicap

Don't call software malware either because you'll affend those who are maladjusted.

I agree with you. Crippleware has been around for over 20 years. John Stark does not speak for me.

I believe it is the intention with which a word is said. There is no malice intended in the use of this word. I suppose handicap parking should have a name change?

Using software, change the System type to 800 MHz custom and enter the rebanding tables (available in the list archives or on Radioreference.com). If you are not using SW, you will have to enter it as a new system, select 800 Custom, and enter the tables.

Topic: 4199 Message: 4715

Hi all,

There have been plenty of discussions about software in the archives. None of this discussion, politically correct or not, would have been necessary if people had just looked up prior discussions about programming software. This subject has been beaten to death over the years.

Speaking of software, I just wish someone would come up with a software that when certain words or phrases are triggered, it would delete the threads or archive them without publishing them to the list.

Was looking to invest in a carrying case for the 396XT

I have search past posts.

Anybody have any experience with the soft leather case by Scanner Master?

http://www.scannermaster.com/Uniden_Soft_Leather_Case_with_Swivel_p/01-581010.htm

Any other cases, suggestions welcome.

Thanks.

I bought that case when I bought my scanner. It's a good fit. Very tight. I normally use my scanner sitting in the cup holder of my pick up, and charge the batteries out of the scanner. So, I don't have the scanner in the case unless I'm going to have it on my belt. The swivel is great! I imagine you realize this, but the swivel "button" on the back of the scanner has to come off to use this case.

Cool Ken,

Does the DC plug fit into the jack ok with the radio in the leather case? Looks like the clearance towards the bottom of the right side cut-out is a bit close?

Thanks.

Hi, Lance.

I have two of the Scanner Master swivel cases. No problems!!! You can
easily take a microphone hanger and make a mobile mount for the case/radio.

From: Dewey
Topic: 4723 Message: 4723

So two questions for you Joe...

1) Which one are you using? Wake up delay is a concern.
2) More generally, does BT affect the receiver's sensitivity? I sometimes wear my 396 on my belt, and if I end up replacing the wired earphone with BT, I will probably have the BT transmitter right next to the 396 if not velcroed {SP} to it.

Mine does this, but comes back in a fraction of a second. I might miss the first syllable, but nothing more. In fact, since it's all digital, I have to wonder if there is a buffer that holds the audio until the link is (re)established - it's that quick.

As I mentioned before, I'm using the Jabra A120.

I've never noticed any sensitivity issues or any interference issues - likely because the BT is so low power in a band so far above the scanner's coverage.

I used to use wired headphones. The BT is soooo much better. The only issues I have is with battery life - particularly on the earbud. The things are only so big, so there is little room for a battery.

I wish a scanner came with BT as a feature, but I understand the licensing costs are significant. It likely would add around $25-60 to the cost of a scanner. Then there is the issue of the BT transmitter being in the same housing as the scanner's receiver. Not sure if that might cause issues or not. Then again, how much of a demand is there for the feature? Of course, it would eliminate battery issues on the scanner side, but there would still be issues with the earbud battery life.

The keypad is still responsive, and the display is visible, if you're looking straight on. However, I cut out the plastic that went over the screen because of a glare issue with the angle I was trying to look at it in.

Ken

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-29 17:39:27 UTC
From: Clark Rennie
Topic: 4723 Message: 4728

I'm using a Jabra A210, however I had to purchase (Radio Shack) a 2.5 to 3.5 adapter as the A210 has a 2.5 plug and my BCDXT and T have a 3.5 jack. The A120 doesn't seem to available anymore.

It's actually an A120s I'm using and it has the 3.5 mm plug.

I recall an older one I had did have the 2.5mm plug and I had to use an adapter.

4731. GRP keys and asterik

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-10-30 10:48:00 UTC
From: gohogger525
Topic: 4731 Message: 4731

Hello:

Yesterday I was playing around with the scanner and pressed something - now I have an asterik on the GRP display line when in press SR1 - it still scans the trunk site BUT I can no longer hear anything as if it was muted.

So I tried changing my original GRP/start up keys for the trunk site from GRP1(read asterik) to GRP 7 (no asterik!) and the trunk site works and I can hear everything from there BUT GRP 1 via SR1 is "screwed?"

The asterik also appears if I press SR2 and SR3

I have no locks on any site/group/conventional

Is there a key sequence anyone knows to get rid of and/or turn off the asterik???

Thanks, Robbie

Easy. You turned off the groupquick key. This may sound funny, but
although I can switch it back on just fine if the scanner is in my hand,
I can't remember what the keys are and the scanner is out in the truck.
But that's what the asterisk means.

OK, I think it's [FUNC] [GRP key number]. Maybe that's it...

Sorry, not quite fully awake and I'm not inspired enough to walk out in
the cold to the truck.

Hi!
Thansk for that suggestion! and I went to his webpages (WHY isnt the XT manual like his great webpages??? that Cd manual is the worst you-know-what I have EVER tried to get through!)

I did find a few lines on "system group keys" so going to give that a try and see what happens

THANKS for the suggestion! much appreciated!!!

Hi!

Man I know about the not being awake...I think I was 3/4 asleep when I messed this up and wish i knew exactly what I had pressed - am going to try the key sequence and see what is what - THANKS! Now time for me to blast myself with a few cups of coffee before I try this out!

Thanks again - much appreciated

Hi!

I just tried Marks scanner webpages (Brilliant site!) and also the heads up on the group keys so knew where to look - just tried the FUNC and the 1 key and the asterik is GONE (unless I press it SR1!) BUT it is with sound again..so weird sound was "muted" though - i think what I did orignally now was press FUNC then HOLD and then the SR1...I've learned me lesson now!

THANKS for the help!!!!

I bought my 396xt at the end of September and got freescan a couple of weeks ago. It was great for programming conventional systems but I got the impression that it would not import files from Radio Reference. So rather than wasting a lot of time trying to do a workaround, I renewed my premium subscription to RR for $15 and purchased ARC-XT for $50 from Butel software. It has saved me $65 worth of my time for sure. Thanks to those on this forum who have given me help in understanding the startup/quickkey functionality.
$65.00 is a SMALL price to pay for the time it's saved me. I'm actually enjoying working with it.
Rob

Freescan won't import files the way ARC does, but it will import them directly from the web pages on RR.

> > I bought my 396xt at the end of September and got freescan a couple of weeks ago. It was great for programming conventional systems but I got the impression that it would not import files from Radio Reference. So rather than wasting a lot of time trying to do a workaround, I renewed my premium subscription to RR for $15 and purchased ARC-XT for $50 from Butel software. It has saved me $65 worth of my time for sure. Thanks to those on this forum who have given me help in understanding the startup/quickkey functionality.

It also has a web import feature, so with a premium sub you can download directly from RR without needing to cut and paste.

Yes. Any of them.

What you will need is a Bluetooth audio adapter such as the Jabra A120S
that will plug into your XT and send the audio on Bluetooth to your BT
earbud.

AFAIK, nobody has seen enough demand to write a native MAC application.
There are people running programs via Windows emulators, however.

Since the BCD396XT does not have a built0in Bluetooth transceiver you would need to use a unit that has the transceiver that connects to the earphone jack. RadioShack or cell phone stores might have them, you can use almost any set that has the proper connector to the 396's earphone jack.

Another plug for Butel? Your impression? Give us a break. Freescan works well.

I wonder how many threads have had something else like this in an effort to sell software?

There certainly has been plenty talking about Freescan and programming. You wasted $50.

So what's wrong with that ? You're plugging Freescan, which is also OK. Sounds like it's also good. Maybe you're just cheap. Some people see value in all the Software developer's work, for which they are prepared to pay a reasonable price. Maybe you'ld like Uniden to give away Scanner's for free along with your lunch,

Have a Nice Day !!

Wow - Sorry. I thought this was a forum where opinions don't have to be blasted. I have no connection to Butel. I just found it very easy to import RR files and get the systems working. It just shortened the learning curve for me and it was worth the money. I don't believe I wasted $50.00. Sorry to have offended you in some way. I'm not in the business of selling software for anyone. I was simply sharing my experience.

I didn't believe I was stepping on any toes.

Rob

If you don't feel you wasted your money, that is what counts.

There are a lot of programs for the XT series scanners. But, there is no need to debate which one is 'the best', as none of them are clearly the best. Each has advantages and disadvantages.

Back to the XT.

Yes, as the scanner does not support BT by itself.

Jabra is one popular adapter. There are others - such as the Plantronics
one that was mentioned.

But, you need:

1. An adapter to convert the audio then transmit it in BT format and
2. A BT headset/earbud to receive it and convert it back to analog audio.

Yes, as the scanner does not support BT by itself.

Jabra is one popular adapter. There are others - such as the Plantronics
one that was mentioned.

But, you need:

1. An adapter to convert the audio then transmit it in BT format and
2. A BT headset/earbud to receive it and convert it back to analog audio.

4760. Re: [BCD396XT] any bluetooth wireless device that will work with the 396xt

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-11-03 21:58:30 UTC
From: MCH
Topic: 4741 Message: 4760

The adapter I use is a Jabra A120s.

The earbud is a Jabra BT530.

BUT, the above is for use with two devices (namely my scanner and my phone).

I used to use an A210 adapter (which requires a 3.5 to 2.5mm adapter
available at Radio Shack) and a BT160 (not sure of the number - maybe
BT150). The reason I switched, again, is so I can use one BT earbud with
both devices. It is also nice not needing the 3.5/2.5mm adapter, too.

I'm sure others will give you other options, too. Just about any BT
earbud will work.

BTW, the A120s/BT530 combo will work even if you're not using two
devices. You don't have to use it on two devices.

Hi!

And if i may add, on my side I really like the ability to listen to my scanner (connected to a Jabra 210) *and* have the audio interrupted by an incoming call on my cell and have my BT ear-mic switch to the call, and go back to scanner audio as soon as the call ends!

4765. Location Based Scanning

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-11-05 12:25:21 UTC
From: Fred Halley
Topic: 4765 Message: 4765

Has anyone had success using the Location Based Scanning feature on the BCD396XT or the BCD996XT?
I'm interested in understanding the complexities of programing this feature and what software has been used successfully.

Fred, W2EMS

My experience is that it takes time and some tweaking, but once you have it setup right you never have to touch the scanner while you are in the car again. The main thing is you need to come up with a plan on how it would work the best for you and what makes sense.

One thing I would suggest, put all your systems in twice, 1 with GPS and 1 without. Assign all your GPS systems the same quick key. I do this just in case I have an issue with the gps, I can revert back to regular scanning in an instant.

I can tell you that freescan works great for programming. I haven't used anything else.

Since HomePatrol-1 has come out, the location information in RRDB has gotten much, much better. For road trips, very little tweaking should be needed.

I can get a brand new one for $489 from www.scannerworld.com . I live 5 miles from the showroom so I can avoid the shipping charges and drive over to pick it up. How old is the unit and would you consider dropping your price to $400?

I needed a new data jack for my BCD396T, and I got it for a very reasonable price at Uniden Parts (I bought several spares since the biggest charge was shipping).

Speaking of repairs, I wonder if the BCD396XT uses the same circuit-board-mounted jacks as the BCD396T, with which I've had numerous problems. After having to resolder and replace the data jack several times (a very delicate operation) I finally epoxied one to the circuit board, and it has held up well. I still have an intermittent connection between the data plug and jack for some reason, so I stabilize the data cable with rubber bands around the body of the scanner.

Recently my speaker quit working, and then the audio jack became intermittent. I opened up the scanner yesterday and found 1) two of the solder joints holding the audio jack to the circuit board were broken loose, and 2) a black wire running between the circuit boards was broken at one of the solder joints. A quick soldering job fixed both problems, and the scanner is working nicely again!

It may sound like I'm rough with my scanner, but actually I'm extremely careful with it. The problem is that I usually have cables plugged into every jack, both at home and on the road, and even mild vibrations eventually break the delicate solder connections.

It would help if when they designed it, they could put all external connections adjacent to each other, then they could be secured in a makeshift harness to reduce vibration, etc.

From: john396xt
Topic: 4775 Message: 4775

Hello all, another proud owner of a new BCD396XT looking for hints, tips, and tricks, shortcuts, etc. I am very curious to see how some of you have your scanner set up - i.e., systems, sites and talk groups, etc. Anyone from the Montgomery County Dayton, Ohio area (we live in Union, north county area) who could provide an example or any advice would be greatly appreciated. Kinda lost on this one, as my latest model scanner is the 780xt. I bought the 396 from Scannermaster and also purchased the ARC CD for it, but having problems with ports, etc. and cannot connect. Ordered the USB-1 cable, as someone suggested my USB/serial adapter might be the problem. Will give it a try when the cable arrives. I realize newbie questions are redundant and maybe bothersome, but hoping there might be someone with some patience who can provide some good advice. Love the scanner, but I really want to organize and streamline things so that I can operate it at optimum performance for my area.

Thanks in advance for any and all help. Hoping this group is the place to be for good information.

John

In Device Manager/Ports, do you see the USB to serial adapter ?
If so so, what is the Com Port ?
If not, is the driver installed ?

Nope, serial USB adapter does not show up in DM. Installed the driver, confirmed install, but will not recognize the connection. See what happens when the USB-1 cable arrives.

I will check out ProScan, too. Open to all suggestions here - thanks, guys.

Does anyone make a cheat sheet shortcut card for this radio similiar to the QuickRef cards sold at Nifty? It's laminated, wallet-size, and very easy to comprehend on the go. Got one for my VX-7R a couple years ago and it came in real handy on road trips:)

Thanks again,

John

Got the USB-1 Uniden cable today - I can't say enough about Scannermaster and their quick service - and after a bit of configuring I connected to ARC and was able to download a couple of systems for my area from the RR database directly to the scanner. I also tried Freescan and did the same. Still deciding which I like best. I see that it will a bit of homework to efficiently operate the scanner to my liking, but keepin up with technology keeps us young at heart and happy, so I am looking forward to it. Although, this scanner has made me feel like an idiot more than once today haha. Things will be a lot smoother when I figure out how to turn off these preprogrammed systems...I am stuck scanning Alaska to West Virginia and bleepin the keyboard and cussin the scanner and growling at the computer. Man I love technology!

I have too many questions to ask. Looking thru archived posts and old messages and dreaming about my old BC245 and when things were simple...

And, to all a good night - have a great weekend and thanks for putting up with stupid questions.

John

Strange,

I use a usb adapter along with my scanner to connect it to my laptop and works great and I have not had any problems. Just curious as to what OS you might be running?

The usb adapter was also cheaper for me than buying another cable plus I can use it to hook up all my other two-way radios with as well, so far it has worked out great.

John welcome to the group. you should try BCTOOL+ it’s similar to arc,but when you save system in BCTOOL+ you save all at once,and you retreive all at once so if you have 10 system or 5,you save all together,instead of one at a time.

Thanks for the replies and the welcome, glad to be here. I suppose I will eventually try all of the software available out there for the 396xt and figure it all out once I get the scanner system figured out, what works the best and what I find to be most compatible. From what I have researched, there seems to be a few features on each program that I like. I will be looking at BC Tool next.

Someone suggested a nice system for quick reference cards - print out the systems, groups, etc on each side of a card that will fit into a laminated sleeve (such as the kind used for IDs, backstage passes, etc) and use a paper hole punch and link them together with a metal ring. I travel extensively and spend a lot of time in different cities, on the road all the time, and will be leaving again in Jan. Would be nice to have a good system down pat with the software to easily load my systems into the radio when I arrive, and some cheat sheets to reference while scanning. Looking forward to learning this amazing radio and being able to operate it quickly when I need to.

Thanks again for all of the good info!

John

John welcome to the group. you should try BCTOOL+ itâ€™s similar to arc,but when you save system in BCTOOL+ you save all at once,and you retreive all at once so if you have 10 system or 5,you save all together,instead of one at a time. http://www.bctool.org/index.php?s=download

Subject: [BCD396XT] Re: Newbie Questions

Got the USB-1 Uniden cable today - I can't say enough about Scannermaster and their quick service - and after a bit of configuring I connected to ARC and was able to download a couple of systems for my area from the RR database directly to the scanner. I also tried Freescan and did the same. Still deciding which I like best. I see that it will a bit of homework to efficiently operate the scanner to my liking, but keepin up with technology keeps us young at heart and happy, so I am looking forward to it. Although, this scanner has made me feel like an idiot more than once today haha. Things will be a lot smoother when I figure out how to turn off these preprogrammed systems...I am stuck scanning Alaska to West Virginia and bleepin the keyboard and cussin the scanner and

growling at the computer. Man I love technology!

I have too many questions to ask. Looking thru archived posts and old messages and dreaming about my old BC245 and when things were simple...

And, to all a good night - have a great weekend and thanks for putting up with stupid questions.

John

Joey, I run Vista on my Dell laptop, and Win7 on my Dell Inspirion home desktop. Neither one would recognize my adapter or find the scanner. Once I used the Uniden USB-1 cable and followed the instructions it worked well with both computers. Go figger.

Subject: RE: [BCD396XT] Newbie Questions

Strange,

I use a usb adapter along with my scanner to connect it to my laptop and works great and I have not had any problems. Just curious as to what OS you might be running?

The usb adapter was also cheaper for me than buying another cable plus I can use it to hook up all my other two-way radios with as well, so far it has worked out great.

Nope, serial USB adapter does not show up in DM. Installed the driver, confirmed install, but will not recognize the connection. See what happens when the USB-1 cable arrives.

I will check out ProScan, too. Open to all suggestions here - thanks, guys.

Does anyone make a cheat sheet shortcut card for this radio similiar to the QuickRef cards sold at Nifty? It's laminated, wallet-size, and very easy to comprehend on the go. Got one for my VX-7R a couple years ago and it came in real handy on road trips:)

Thanks again,

John

Ok, well that is good news that you did get up and running which is the important part. I know I have Windows Vista on both my desktop and laptop and it has it's moments some times. Funny how some things work and others don't. Oh well that is just the way it is, like I say I purchased this one http://sewelldirect.com/usbtoserial.asp and so far I have not had any problems. However what works for one may not work for someone else. Your mileage may vary.

Take care,

Joey

Sounds like you had no drivers or the wrong ones.

I've purchased a lot of (cheap) adapters and haven't found any that
would not work with the correct drivers.

Checkt the demo at:
http://www.homepatrol.com/index.php?option=com_content&view=article&id=4&Itemid=11

You also might want to ask specific questions about that product either in the Community forums at the above site or using the HomePatrol Yahoo! Group (http://groups.yahoo.com/group/HomePatrol)

You can use the Sentinel software to change alpha tags. We do not provide any facility to add undocumented TGIDs (but as soon as they are documented on RadioReference, they are added to the HP database). There is some 3rd party software that permits more editing of the database.

From: John Harley
Topic: 4775 Message: 4792

I successfully loaded all or most of the systems into the radio via ARCXT...but I have a terminal brain fart when trying to operate this radio, i.e., turning systems on and off and listening to what I want to. It scans everything in the memory and all I get is error bleeps when I try to QK and access or stop it from scanning everything. Absolutely thee most frustrating piece of technology I have ever owned. Other than marksscanner dot com and the 'easier to read manual', can anyone suggest a website that breaks it all down and adequately explains how to operate this dang thing? All of these keyboard error bleeps make me want to park this puppy on Ebay. Halp!

I miss banks and channels...very much so:(

In ARC-XT, at the top of the window you will see "QuickKeys" Click on it
and go to "Quick Key Status",
uncheck all the Quick Key numbers that you don't want to scan. I usually
uncheck all except one, which is the one (any one QK) that I always scan.
To scan another system, press that QK number on the scanner. To select a
two digit (like 21), press the . (period or NO) button first and then the
desired QK number.
The same procedure is used to quit scanning a system.

Once you get familiar with this type memory management, you will find it
very efficient. Also, ARCXT is a great program.

Yep, agreed that ARCXT is a great program, but my ultimate goal is to be able to operate the scanner via QKs and the old-fashioned push-button method when power is out during a hurricane, etc (we are snowbirds - house in OH, and a house in Pinellas County, FL) when I have no access to ARCXT, and I want to be able to navigate quickly to particular systems. Not as easy as I had hoped, but we're workin' on it - thanks:)

SQKs can't get much easier. Press the digit while to turn the site/system on and off (or press "." then two digits for two-digit SQKs).

From your description, it sounds like you haven't actually assigned the SQKs you are trying to use.

I have the impression that you think the scanner must be connectet to ARCXT
to operate the scanner. It doesn't, ARCXT
is only used to program the scanner, including assigning SQK.
A tip that I use for remembering which SQK is assigned to which system is
to include the SQK number in the naming of the systerm like Los Angeles PD
is named "5LAPD" because it's assigned SQK 5. Of course there are several
groups with that system and they are assigned Group Quick Keys (GQK).

From: kc8owl
Topic: 4798 Message: 4798

Hello

I searched and was unable to find what I thought was the answer to this question -

When Searching (not in Scan mode) a trunked system and a TG becomes active that is not currently programmed in an active group, is there a way I can set an audible alert that will sound only when a new TG becomes active?

Thanks

Mike

That would be encryption. If it scrambles the audio for a split second and goes silent, you won't be able to monitor it.

4803. At least as good as a Pro-137?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-11-30 16:02:04 UTC
From: Gary G
Topic: 4803 Message: 4803

I picked up a $40 Uniden made Pro-137 on clearance from Radio Shack...you know, it looks almost exactly like the the BCD396XT except its blue (and doesn't have trunking, digital, etc, etc). What the Pro-137 does have is AMAZING sensitivity. Has anyone used both the 137 and the 396XT? Are they about the same analog-wise?

4804. Re: At least as good as a Pro-137?

It doesn't have trunking, it doesn't do digital but it looks the same except that it is blue.
Therefore it is not a 396XT which does digital and trunking and is not blue.

Yeah I am aware a 137 is not a 396XT. They probably share some components and I just wanted to know if a 396XT is as sensitive.

Actually it is quite easy to manage the freq's but.I have to admit it is totally different thinking than my old scanners. Think of it as loading everything you ever want to listen to and then tweaking it when needed. I've used scanners since I had to buy crystals for them. Once you set them (systems) up save them and then load what you need or want to the scanner. Save all the systems including stuff you don't want. You then can go both ways, use what is in the scanner or what is on the hard drive. Look at lock out of system. ARC-XT is really different in how we old farts use the software but it works really well with the 396xt. I actually had to do something I never do.read the manual. Please don't flame me as fact is it is a really cool program but, I had to change the way I think to use the new format. Good luck, Duff

Duff,
Thanks for the response. I do have my files set up in ARC XT, but I was wondering if there is an easier way to maintain the frequencies in ARC XT that get updated frequently? For example, I have NYC frequencies and they get updated frequently. Other than manually updating these frequencies, then uploading to the 396XT, is there an easier way to maintain them in ARC XT?
Thanks

I use the radio reference web site to keep mine up to date but that being said my area certainly isn't as rapidly changing as yours. I had a BC246XT and as much of VA is now APCO25 (especially my area) I couldn't get there with my old radio so I let my paid account expire on www.radioreference.com. I had or could search for everything I needed. Now I've reactivated my account as with ARC XT and my new 396XT it is just easier to download the bulk of the items I'm interested in. I haven't mastered the new power yet so I'm not going to even make believe I can fully answer your question.

Anyway, the other option is to capture it in the radio and download to ARC XT but what I do is download the bulk of it from the WEB site and tweak as I go. The subscription is worth the effort to me. Not much help I know but to me messing around with it is half the fun. Thing is you can drag and drop what you find scanning and what you download in ARC XT so I find it just easier and more entertaining. Sorry if I wasn't much help. Duff

Subject: [BCD396XT] Re: Updated Frequencies in ARC-XT

Duff,
Thanks for the response. I do have my files set up in ARC XT, but I was wondering if there is an easier way to maintain the frequencies in ARC XT that get updated frequently? For example, I have NYC frequencies and they get updated frequently. Other than manually updating these frequencies, then uploading to the 396XT, is there an easier way to maintain them in ARC XT? Thanks

Hi Duff,

If you have any 396XT files for SW VA I'd appreciate a copy. Looking mainly for VSP for when I travel in that area.

Thanks,

Nick

4817. RE: [BCD396XT] Additional Belt Clips for the the 396 XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-08 16:37:08 UTC
From: John Harley
Topic: 4811 Message: 4817

I use this scanner on the job (I drive a big rig 48-state) and it makes my job so much easier, as I rely on communications (primarily CB radio *ack*) to enhance safety on the highways. These days, CB radio is not as reliable as it has been due to intentional misinformation, profanity, racist bs, and general argumentation (ha). When I find myself in a jam, gridlock, or some kind of delay, I can usually find information on the scanner. Have the 330brt, but I grew weary of not being able to hear the state police on APCO 25 systems and bought the 396xt to rectify that problem. The CC feature is invaluable in accident situations. I hardly turn on the CB anymore, it has become a secondary alternative to information radio on the nation's highways. This scanner does the job, and then some.

As for cases and mounting options in a semi-truck - I purchased the heavy duty leather case from Westmall (?) for the 330T and it fits perfectly on the 396. I velcroed a double-drink cup holder onto my dash for both the 396xt and my Yaesu VX-7R and it works like a charm. They both fit in the cup holders with folded cardboard shims (so they don't vibrate and slip to the side) and there is even a small space between the cup holes for pens, notes, freq list, etc. I will try to post a pic of it here, hope it works. Any other suggestions would be appreciated. I travel with a plethora of gadgets including talking GPS system, 10-meter radio, 2m, 440, 220, and CB (which we have come to call the Childrens Channel) haha...the BCD396xt is a great addition to my work radios, and will be even better when I learn how to use it quicker when I see a situation on the road. Thanks for all of the tips here., I read the mails daily hoping to learn something:)

John

Im assuming by the messages I see in other forums I am not the only one with the following issue

I purchased my new 396xt aboiut a year ago and it came with the serial port cable well thanks to Microsoft ......all the new pc's with windows 7 do not have serial ports and it seems hit and miss on getting
those aftermarket converter cables to work.....

I have a RS 323 or 232 ??? and there is no windows 7 driver for this

Ideas?

Uniden makes the USB-1 which is more
expensive, but has the support of Uniden.

It's really just a converter and cable minus the two DB-9 connectors,
but it may make it a little easier to find the drivers.

The supplied cable works fine. I use it all the time with all the recent model Uniden scanners. Your argument is why the PC manufacturer didn't include a serial port (to which you will likely get a reply that USB-RS232 adapters are available). The only PC I have that does not have a serial port is a netbook I just got a couple weeks ago, but it doesn't have a CD drive, either. BTW, the serial cable works fine with the adapter on that PC, too, as does the USB-1.

As for the dealer giving you a $30 USB-1 for a $10 serial cable, I doubt they will, but you can ask.

BTW, USB-RS232 adapters can be purchased for less than $5 including shipping.

Got my 396Xt yesterday and had it running onWin7 within a hour. If you get a Trend Net USB/Serial converter cable, download the Win7 Diver and follow their instructions -to-the-letter- it will work just as you would expect.

I did not follow the instructions the first couple of times and ended up installing/uninstalling twice before I decided to RTFM.

Everything DOES work. Ask your PC supplier why they didn't include a serial port. Maybe they will give you an add-on board.

BTW, there are virtually no issues with serial ports vs the many complaints of people trying to get USB to work correctly. With serial ports, the only setting to worry about is the COM port, and 99.99% of the time it's COM1 for stock serial ports. With USB, you need to worry about that (and if you use a different USB port, the port number will often change) plus USB drivers plus other issues. USB is less universal than the standard serial ports they replaced.

If you want a challenge, try finding a USB-3 card in an electronics store like Best Buy. They sell USB-3 drives, bot not the card to install USB-3 on a PC, and none of my PCs came with USB-3, either. Not every PC will come with every interface you will ever need.

I found drivers on support pages for other USB to serial cable converters. In time these older drivers may be updated to support Win7 as they must be certified by Microsoft. On older windows machines windows would prompt you about uncertified drivers when installing and you had the option of saying yes and installing it anyways. Windows 7 doesn't provide that option. One way to work around it is when booting windows. To make a non-windows 7 certified driver work you must hit F-8 on boot up and select the option to use the uncertified drivers and you must do this every time you boot the computer. I did this for my old 246 with an off the shelf converter I bought online. A few months later their site provided a new certified driver for win 7. I haven't had any problems using the cable and driver supplied from Uniden. Duff

You seem to be missing the point that the USB adapter is more than just a cable - it's an electronic interface device that converts between two different interface specs. To include that adapter in the package would raise the price needlessly for those who have serial ports available, or already have a USB-to-serial adapter.

I should have been more specific on this. When booting the computer tap F-8 key until the windows boot option screen pops up. Then select the option to "Disable driver signature enforcement" and then select the option to start windows. This should stop windows 7 from preventing the loading of the unsigned driver. This mode was provided so programmers could use unsigned drivers in a software developer environment/mode. Not the greatest option but it is a workaround until the manufacture of your USB to Serial adapter updates the driver to a MS approved/signed version for Win7. Don't ask me why Windows 7 doesn't even tell you that it has blocked the driver from loading. Must have been a Microsoft marketing idea or feature.

Just hot back from the shack.....

Well I found a cable that appears to work for the uniden to windows 7 issue.

it is a GIGAWARE 6FT USB-A TO SERIAL CONNECTOR 08A10

It comes with a disk with several drivers on it I did not have to install any for this to work I have an HP Pavilion running windows 7.

There are two diffrent models at shack one is $39 one is $29

Model mentioned above is the $39 dollar unit

I can vouch for the fact that this problem is not a ghost and feel for anyone that gets told that it's in your head.
Even went down the road with Butel for their Arcxt software they haven't heard of any issued with Windows 7.

There is a problem with somewhere between Windows 7 64-bit, the scanner and software and maybe that is where some are saying it works fine in Windows 7, it does in 32-bit.

I had a generic USB converter with the prolific chipset and tried every driver possible, installing, testing uninstalling etc etc.
I then bought the sanctioned Uniden cable and had the same exact issue with every driver.
Both failures were on a new HP laptop with Windows 7 64-bit installed.

All cables rs-232 direct, generic usb and Uniden USB-1 cables worked just fine on Windows XP pc.

My Situation (still unresolved!) I can use the pc upstairs but really want to use my new laptop.

For me the problem arises when attempting to transfer large amounts of data, like downloading the origional data that comes installed on the scanner.

FreeScan worked in this situation so I know some will say just use FreeScan and I can, I am more familar with Arc-XT and want to get that working.
Note: I am not promoting either software, more or less just saying that there is something real here.

With Arc-xt and my new HP Laptop with Windows 7 64-bit, I could sometimes upload or download a small amount of data like a single group.
The problem arises when I attempt to download a large amount of data, it starts off normal and you can see it counting up the scanner data but then locks up,
after an extended period of time the application gives a communication error, you are forced to quit by forcing the app closed.

Tim

I am still using a relatively old Belkin converter. I just did virgin Win7 installs on two machines. I installed the Belkin Vista/prior drivers from their website and have had no problems with any of my radios (KW, Icom, Yaesu, Uniden, others).

Got my 396Xt yesterday and had it running onWin7 within a hour. If you get a
Trend Net USB/Serial converter cable, download the Win7 Diver and follow their instructions -to-the-letter- it will work just as you would expect.

I did not follow the instructions the first couple of times and ended up installing/uninstalling twice before I decided to RTFM.

That is not necessary when using the latest drivers for the USB-1 and other models that use the Prolific chipset.

I should have been more specific on this. When booting the computer tap F-8 key until the windows boot option screen pops up. Then select the option to "Disable driver signature enforcement" and then select the option to start windows. This should stop windows 7 from preventing the loading of the unsigned driver. This mode was provided so programmers could use unsigned drivers in a software developer environment/mode. Not the greatest option but it is a workaround until the manufacture of your USB to Serial adapter updates the driver to a MS approved/signed version for Win7. Don't ask me why Windows 7 doesn't even tell you that it has blocked the driver from loading. Must have been a Microsoft marketing idea or feature.

Subject: RE: [BCD396XT] windows 7 and serial port nightmares

I found drivers on support pages for other USB to serial cable converters. In time these older drivers may be updated to support Win7 as they must be certified by Microsoft. On older windows machines windows would prompt you about uncertified drivers when installing and you had the option of saying yes and installing it anyways. Windows 7 doesn't provide that option. One way to work around it is when booting windows. To make a non-windows 7 certified driver work you must hit F-8 on boot up and select the option to use the uncertified drivers and you must do this every time you boot the computer. I did this for my old 246 with an off the shelf converter I bought online. A few months later their site provided a new certified driver for win 7. I haven't had any problems using the cable and driver supplied from Uniden. Duff

If nothing else you can buy a used (refurb) computer from Tiger Direct that has serial ports for $100 and up. I have two I use for scanner control, ones been going almost 2 years non-stop. They ae cheap and have both serial and USB ports, and they have either XP Pro or Vista or no OS versions as well.

Windows 7 64-bit or 32-bit??? Just curious.

I have a new HP Pavilion laptop and have been having an issue with the drivers all of them and both a generic cable and USB-1 on Windows 7 64-bit. All cables work fine on my Windows XP desktop.

I have tried the drivers from prolific directly as well as the ones provided on the ScanMasters link.

Just hot back from the shack.....

Well I found a cable that appears to work for the uniden to windows 7 issue.

it is a GIGAWARE 6FT USB-A TO SERIAL CONNECTOR 08A10

It comes with a disk with several drivers on it I did not have to install any for this to work I have an HP Pavilion running windows 7.

There are two diffrent models at shack one is $39 one is $29

Model mentioned above is the $39 dollar unit

Hi Peter,

I'm familiar with Tim's problem (not personally with Tim) but have seen it on a couple of other HP *LAPTOPS* - laptops being one the keywords here and the 64 bit v. of Sys 7 being the other. The only effective solution to the problem I've found is not to use an adapter. I don't want to be rude here but it is clearly more simple to purchase the Uniden part, download their copy of the Prolific driver (which does work with the 64bit Sys 7) and go from there. The desktops (HP included) have been working just fine and most all, even today, still have serial ports.

lol I like the (not personally) part, as I stated I have the Uniden cable
and still have the communication issue I described with ARC-XT.
I've been starting to think that it's a firmware issue with the Usb ports.

Oh well I can program my scanner on another machine but the engineer in me
wants to know why I can't use my laptop, obviously the laptop is a more
convenient choice when it works. :)

I talked to someone at Butel as I stated and they said that they weren't
aware of any issues and that it's just normal rs-232 comms.
I can't help thinking that it's related in someway to the 64-bit
implementation of the usb port or maybe the machine an HP Pavilion DV6.

Can someone confirm Windows 7 64-bit Laptop ARC-XT using the USB-1 cable to
the scanner, if so which driver version down to the build would be greatly
appreciated.
I have tried all the drivers from ScanMasters aka Uniden sanctioned and from
the Prolific site as well.
It was a while ago so that is why I would like to know the exact version.

Thanks,
Tim

Do you have the same issue with other SW packages? That might help
narrow down the cause being the PC, the OS, or the SW.

Hey Joe,

Curiously not with FreeScan but yes with Arc-xt and not all the time, mostly on large data downloads like trying to read the origional data that comes installed on the scanner.

thanks

If you've never seen the issue with FreeScan, that would seem to rule
out any issues with the PC or OS.

4844. RE: [BCD396XT] Re: windows 7 and serial port nightmares

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-09 18:07:08 UTC
From: Tim Woodward
Topic: 4818 Message: 4844

I know that seems like the simple answer except that Butel claims it's not doing anything special.
That's where I'm at . . .

If you've never seen the issue with FreeScan, that would seem to rule out any issues with the PC or OS.

Are you sure ?
My 3.5mm (1/8) plug fits fine.
Now where in the manual or WiKi was I able to find this information.
The BCD396T manual on page 35 does have this info. and they are the same size.

I was just thinking the same thing before I saw your post.
It is a 3.5mm, not 2.5mm. Maybe that was a typo.

4847. Same 396XT Same freqs but Different Trunk Strengths

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-09 20:04:38 UTC
From: gohogger525
Topic: 4847 Message: 4847

Hi:

My 396XT pulls in trunking site strengths at the max 5 bands when using an external rooftop watson ant and also the same strengths when using it handheld with a watson ant. A friend of mine has the exact same model, ants, and bought it a month after I got mine. We monitor the same trunking freqs yet he only gets 2-3 bands for the strength monitor.

Could this be something to do with the way he has set up his sites - me, I gotta hear it all whereas he has selective listening for one site for each group.

Any thoughts??? Thanks

Robbie

A couple...

1. Make sure his Attenuator is not enabled.

2. Is it possible he is hearing a distant site? If so, the only way to solve that is to set it up so all Sites are in all Systems (if multiple Systems are set up for different agencies or different areas or different interests)

Basically, yes, I would say it's a difference in the way the scanners are set up.

If you have some software, save his configuration, then load yours into his scanner and see if there is the same signal difference. If not, then it is definitely in the config of the scanner.

How does the receive audio compare to each other? Do they both sound about the same when next to each other or does his really "sound" like a weaker RX as well..just wondering if its something with the meter and not the rx quality.

I know that seems like the simple answer except that Butel claims it's not doing anything special.
That's where I'm at . . .

I still find a TWiki difficult to navigate compared to a manual.
For the basics of the 396s, they are so similar that I use the BCD396T manual.
Could someone point to that info. in the TWiki for the earpiece jack ?

Clark

I had the same problem with mine. I slowed the baudrate to 19200 matched it on the XT and it worked just fine.

4854. RE: [BCD396XT] Re: windows 7 and serial port nightmares

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-09 22:03:52 UTC
From: Peter Duffy
Topic: 4818 Message: 4854

I agree that probably is the easiest solution. I have had some issues with ports on the HP laptops which is why I mentioned the drivers. I use the laptops at work with various vehicle diagnostic programs and gave up with converters. It was just easier to buy the manufacture USB interface device in the long run. Of course that wasn't my money. ;)

Subject: [BCD396XT] Re: windows 7 and serial port nightmares

Hi Peter,

I'm familiar with Tim's problem (not personally with Tim) but have seen it on a couple of other HP *LAPTOPS* - laptops being one the keywords here and the 64 bit v. of Sys 7 being the other. The only effective solution to the problem I've found is not to use an adapter. I don't want to be rude here but it is clearly more simple to purchase the Uniden part, download their copy of the Prolific driver (which does work with the 64bit Sys 7) and go from there. The desktops (HP included) have been working just fine and most all, even today, still have serial ports.

I still find a TWiki difficult to navigate compared to a manual.
For the basics of the 396s, they are so similar that I use the BCD396T manual.
Could someone point to that info. in the TWiki for the earpiece jack ?

I may be coming in on this late but have you tried Easier to Read BCD396XT Digital Scanner Manual <http://marksscanners.com/396XT/396xt.shtml> to use for a manual? I agree with you it isn't perfect but I have found this easier to read and navigate right now and with the free version of CutePDF writer http://www.cutepdf.com/products/cutepdf/writer.asp I can print the thing out. I have something similar although it involves standard frequencies.

I will try and explain......I have one frequency in two different systems. 154.130 As far as I know both systems have the same settings ie; att, AGC etc however the audio of each channel sounds completely different. They are both clear but one is a bit quieter than the other. I can't seem to figure it out.

I will have to dig further and see what the problem may be. In the mean time any one have

A couple...

1. Make sure his Attenuator is not enabled.

2. Is it possible he is hearing a distant site? If so, the only way to
solve that is to set it up so all Sites are in all Systems (if multiple
Systems are set up for different agencies or different areas or
different interests)

Basically, yes, I would say it's a difference in the way the scanners
are set up.

If you have some software, save his configuration, then load yours into
his scanner and see if there is the same signal difference. If not, then
it is definitely in the config of the scanner.

My serial port cable does not work with my 396XT anymore. When I first got the unit, it would work fine, but for the past few months it will no longer let FreeScan connect with the 396XT. I have tried two different computers....one which has a serial port and I have two different HD's on it (one running Vista and one running XP)...and the other is my laptop which has a usb to serial converter. Both computers USED to be able to talk to the 396 but not now. Any ideas?? Should I buy the USB-1 cable?? Thanks, Mike - WB0ZPW

Check the settings on the PC (COM port and port settings) and on the
scanner (port speed). Often, people change the port speed on the scanner
for GPS, but forget to set it back for the PC.

I bet one is set for FM and the other is set for NFM.

Odds are FM is the correct setting.

Jeff,

I've encountered this a couple of times here in our area (yours and mine). Both times it wasn't our radio or settings - it's the dispatch station itself. Creve Coeur is an excellent example of a department with "low volume". Frequently it can difficult to clearly hear their dispatches. It doesn't matter what radio you use or what settings you change, etc. - it's very possible it's the station with the problem, not your radio.

Just a note if you press F + 5 it increases the volume one notch which can change the same freqy volume....

Hi

THANKS everyone for suggestions and ideas - much appreciated for your help and feedback!

I suggested a few of the things and we tried a few of the things like the att and the volume and the FM or NFM and it his scanner still is weaker than mine in receiving trunking signals. Also tried his set up into my scanner - I still got max of 5!!!

Just had a crazy thought...we never looked at the batteries - I have the NiMH with 2300 mA - not sure what he is using - could this be the problem???

Doubt it's the batteries, but it would be interesting to compare them.

Also check the firmware version. One may simply be reading higher than
the other.

I don't know if this is an option for trunking systems but, have you looked at the "volume offset" settings? I had a particular frequency loaded into two different systems and there was a definite difference in the audible volume. It turned out I had the 'volume offset" on one set as +2 and the other was the default of 0. Might be worth a try.

Battery size and/or rating should not have any affect on signal strength.
The signal meter is a relative indication of signal only, can you physically
hear any signal difference? Are you both using the same antenna? Did you
try swapping antennas?

The only true way to find out is put each radio on a test bench with a
calibrated input signal and check the receiver sensitivity in various
places, looking at the "s-meter" will just serve to drive you nuts.

I think you're mixing two threads. A volume offset will not change the
S-meter reading. There was someone else posting that certain channels
are more loud than the same channels in different banks.

> >

> > Could this be something to do with the way he has set up his sites - me, I gotta hear it all whereas he has selective listening for one site for each group.

> > Lots of good answers. Here's one more:
No two "identical" radios are really identical. There will always be some miniscule differences in manufacture, tuning, external parts like antennas, etc., so that you won't get identical performance.
Example: My $2700 issue MaCOM HT and my partner's identical unit, issued on the same day, same lot number, mere single digits difference in serial number.
One will pick up dispatch while the other is silent or vice versa. Or my HT will pick up while the mobile just sits there. They've been scoped and adjusted, but the performance remains the same. Not to sound elitist, because I love my 396's, but if a professional model radio, manufactured under more stringent standards than our scanners, has this "problem", then it's not surprising that our $500 radios exhibit this quirk as well.

Unless it's so bad that you feel a need to send it in for a factory tune, or if you know a local land mobile tech that you trust, you'll probably have to just live with it. Chalk it up to the "Mysteries of Radio," which is basically all it is.
Good luck and Merry Christmas!

(Cross-posted to Carmachicago group)
Attempting to add StarCom21 site 102 (Cook County South) using ARC-XT basic, version 1.5, build 1. I do not have an active RR subscription, so I am manually inputting. Frequencies (as listed on the CARMA website) have been entered. Site Settings as follows: Hold Time: 0/P25 Wait Time: 400/ Modulation: AUTO My questions are: 1) ARC-XT basic only allows for 4 positions to the right of the decimal point (all frequencies are 5 positions). Will the frequencies be correct when entered (and subsequently downloaded)? 2) Presuming the Mot Bandplan is to be set to Custom, and the Bandplan will need to be edited, what are the lower freqs,, upper freqs,, steps and offsets? Any help appreciated. NOTE: I am aware of the arc396 yahoo! group, and am awaiting moderator approval to join, hence my post here.

Do you know what type of a digital system that is being installed? As long as it is APCO-25 trunked or digital mode those Uniden scanners will work. If it is a OpenSky Digital or MOTOTRBO Motorola digital system it will not decode those types of systems.

Once you find out what type of digital system they are installing we can provide more information.

And if it's not a P25 digital system, you are out of luck, as that is
the only form of digital any scanner might support.

YES, the scanner will recognize the last digit in the freqy, and NO you do not add any "CUSTOM" or tables to P25 Systems that are like STARCOM=9600baud, the radio does the work for you....

i thought i was going crazy when i saw this question!
the 396xt... not digital??

however, i'm glad to see that medic has both the table
and the handheld model! that's quite nice to hear about!

myself, i have the handheld, another handheld (radio shack)
just for a few local police and a couple of other broadcasters,
and i use my computer to listen to my original hometown's
police since they re-worked their signal and it doesn't
reach where i am anymore..

it's interesting to hear about other people's setups, maybe
i will buy a 996 one day but i'm happy with the 396 as
a base station!

Both of the scanners you own work in P25 Digital Trunking systems.

I own a BCD996XT and a BCD396XT and am very happy with both of them. The county
I live in is moving to a Digital trunked system and I was wondering if anyone on

the list had any information about manufacturers developing a scanner that will
receive digital transmissions?

I also was amazed by his question. It seems very strange that a person is not curious enough to even read the description of the item printed on the outside of the box (that he purchased and probably spent close to a $1000.00), not once but several times on both scanners.
Also to even look at the enclosed CD.

Some people can just say "I want to buy the best scanner" and they are
sold what the dealer feels is the best.

4882. Cant hear the digital freqs!! Help

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-17 10:43:34 UTC
From: ceidrafter
Topic: 4882 Message: 4882

The town that I live in went to digital and I downloaded the new freq. from Radio Reference. I can't hear the digital but i can hear the analog channels. Do I have a setting wrong somewhere. I have been trying to figure it out for about a week now and still can't get it. Any help would be great. I have heard one digital channel and it sounded like they were talking in a bucket.

Ok. Out of curiosity. You've requested help from the BCD396XT group, do you own a scanner that has Trunk Tracker 4 capabilities such as a Uniden BCD396 T or XT or 996 or the Radio Shack equivalent product? If you do not then you will need to purchase one in order to hear the new system in your area.

However, if you have entered the frequencies into a compatible scanner then perhaps you either have the scanner programmed incorrectly or there is encryption involved in this system.

A little inside information regarding where you live will help those wishing to assist you in resolving your problem. Where do you live? Just mention the city or county. Specifics aren't required, just the general location will be sufficient.

There are many folks here who program their scanners via software. Others do it manually. If you wish assistance in programming manually I can help. If you would like to contact me directly then feel free to email me at eph39@comcast.net

Thanks,
James

If your town went digital and analog most likely you will need to re-program it as a MOTO TYPE11 and use the "Custom" setting with "tables' as in Illinois=North West Central Dispatch =3600baud system....

What does going "digital" have to do with custom tables and rebanding?

He said he is hearing the analog stuff. If they went digital you need to know if it is Motorola,
GE-Critical Communications-Tyco-Harris or what ever name they are this week

With all the stuff posted and the various smart phone apps there is more and more encryption. P-25 Motorola encyrption is cheap.

For those of you who want to learn how to use your scanner without having to be stuck on front of your computer, the 'Easier to Read XT Manual' is now available in printed form which covers all four XT radios.

For the same price it will cost you to waste an ink cartridge printing 100 pages of the online manual you can have a nicely formatted 5.5 X 8.5 booklet.

Click here <http://www.scannermaster.com/Easier_to_Read_Uniden_XT_Scanner_Manual_p/\47-511554.htm> for more info.

The apps and scanners have NOTHING to do with with the fact there is more encryption, blame 911 and sales people who make bonus $$ for selling the encryption and spewing lies of all sorts to do it. That and a few idiot council ,members who don't know anything about radio systems and then add in chiefs who want to hide their activities from the taxpayers..... those are the ones to blame.....

You're trying to pick up Johnson County?

What type of system do you have it programmed as? Should be programmed in as a Project 25 Standard system. The RR freqs should allow you to hear it if you have I programmed my BCD396XT myself. I'm from Cedar Rapids.

I can hear the Johnson County System when I am down that way.

In the north part of the county, they do have weaker towers.

Where are you located? The Iowa City core area or Northern Johnson County?

Iowa City/Coralville has a simulcast system of higher power over 100W.

The Swisher and Solon towers are 37 W.

The digital audio isn't 100% in the northern part, but I can receive.

4893. Re: [BCD396XT] Re: Cant hear the digital freqs!! Help

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-18 18:00:49 UTC
From: Milt
Topic: 4882 Message: 4893

Paul,

Using Freescan, read the scanner.
From the top row of tabs select the first tab of the second group which looks like a folder (ADD NEW SYSTEM)
In the popup box that appears select P25 STANDARD (DIGITAL XT)
Give the system a name and click CREATE SYSTEM
You will see the new system at the bottom of your systems list on the left side of the screen. The cursor will be on (GRP) TGID Group 1
Move the cursor to (P25S) Site 1
On the sight side of the main screen you are in the SITE SETUP screen, select a quick key and startup key, leave the rest of the settings at default. Select the Trunk Frequencies tab. Open a browser window and go to http://www.radioreference.com/apps/db/?sid=6673. Go to SYSTEM FREQUENCIES and highlight the 11 channels listed. Right click on the highlighted frequency info and select copy. Go back to Freescan and click the EZ-GRAB button. In the EZ-GRAB Window click on the 1 COPY FROM CLIPBOARD button. Now click the 2 IMPORT TO FREESCAN button. You will get a popup 11 frequencies imported message. Then click the 3 Close button.
If you wish (it's not required) you can remove any of the channels not marked in red or blue on the Radio Reference chart.
Now click the APCO BANDPLAN Tab.
in position 0 enter 851.00625 in Frequency and 6.25 in spacing.

You have now entered the system information. You are now going to enter the talkgroup information.

Return to the Radio Reference page and look through the talkgroup listings to find the talkgroups that you want to listen to. For this discussion we will select the first three groupings of Sheriff, Fire and Ambulance. Highlight and copy only the 2 Sheriff talkgroups. Be sure to ONLY highlight and copy the talkgroup information, not the heading titles or the section headings.
Switch to Freescan and go to the left side of the screen. Put the cursor on (GRP) TGID Group 1. Moving to the right side of the screen name the group if desired and select a quick key. Select EZ-GRAB. In the EZ-GRAB window make sure that the Delimiter is set to Auto/Tab. In the EZ-GRAB click 1. COPY FROM CLIPBOARD. Notice that the 8 fields have selectable names. In field 1 select TGID In Field 5 select DISPLAY set the rest of the fields to ignore and click 2. IMPORT INTO FREESCAN. When the info is correctly inputted, CLEAR ALL. Return to the web page and repeat, entering the talkgroups for fire and ambulance. Close the EZ-GRAB window.

Returning to Freescan you should see the 10 talkgroups with names. Make any name changes, add any comments (only visible in Freescan) and program the scanner. The digital audio will take a bit of getting used to. Use ID SCAN

to hear only the entered talkgroups. Use ID search to find other
talkgroups. That should be enough to get you started. Refer to the Radio
Reference page for additional talkgroups and information.
Also refer to http://www.radioreference.com/apps/db/?ctid=836 for
conventional frequencies. They are entered in the same manner except set
the system type to CONVENTIONAL instead of P25.
Since this is an 800 MHz simulcast system you may find that you need to move
the scanner around to find the best reception. Also don't be surprised if
the digital audio is poor when moving about, this is normal with digital
systems and scanners. Also notice that the main Fire frequencies for the
county are simulcast on the existing VHF channels as well.

Good Luck
Milt

Trying to pick up Johnson county, Iowa. I am trying to scan the Johnson
county P25 System. I used FreeScan to program my scanner which is BCD396xt.
I have had for a couple of months now. Still trying to get used to it. I
think I just don't have something set right.

Ok. Out of curiosity. You've requested help from the BCD396XT group, do you
own a scanner that has Trunk Tracker 4 capabilities such as a Uniden BCD396
T or XT or 996 or the Radio Shack equivalent product? If you do not then you
will need to purchase one in order to hear the new system in your area.

However, if you have entered the frequencies into a compatible scanner then
perhaps you either have the scanner programmed incorrectly or there is
encryption involved in this system.

A little inside information regarding where you live will help those wishing to assist you in resolving your problem. Where do you live? Just mention the city or county. Specifics aren't required, just the general location will be sufficient.

There are many folks here who program their scanners via software. Others do it manually. If you wish assistance in programming manually I can help. If you would like to contact me directly then feel free to email me at eph39@...

Thanks,
James

Paul,

If you've already received this info, sorry for duplicating it. If you haven't, then here is the latest data and should allow you to hear everything you want in Johnson County. If you're at all interested, Iowa City is also listed with the Johnson City data (just below it). There are links to both (on Radio Reference) for the data and what each is for.

No, I do blame those that post activities that they hear such as swat or drug operations or even the stupid I heard the cops at the doughnut shop stuff.

Since every person who has a smart phone now can have an app to listen to streaming scanner radio and it is not just the "scanner" people anymore encryption is coming.

It's from what I understand in every digital radio now sold by Motorola. Once any of it is turned on scanners are rocks.

Higher level encryption is what specialized units use.

It has nothing to do with management, it's a matter of hiding from the bad guys and unfortunately the "good" guys get locked out also.

While I have never been at a Tyco now Harris sales presentation, I can hear the salesperson saying Chief, our Open Sky system cannot be monitored.

It doesn't even need encryption to keep out scanners at this point.

I am in Iowa City. I can hear Johnson County on the analog side of it. But Iowa City went all digital a couple of weeks ago, Johnson County hasn't made the switch yet. I reset my scanner and I can now pick up some of the digital channels but some of it sounds garbled, if that make sense. So that makes me think I dont have one of my settings not right yet. I have only had this scanner for a couple of months and its taking alittle getting use to.

You're trying to pick up Johnson County?

What type of system do you have it programmed as? Should be programmed in as a Project 25 Standard system. The RR freqs should allow you to hear it if you have I programmed my BCD396XT myself. I'm from Cedar Rapids.

I can hear the Johnson County System when I am down that way.

In the north part of the county, they do have weaker towers.

Where are you located? The Iowa City core area or Northern Johnson County?

Iowa City/Coralville has a simulcast system of higher power over 100W.

The Swisher and Solon towers are 37 W.

The digital audio isn't 100% in the northern part, but I can receive.

Could be the VIDA switch they are using for County Traffic.

When it is routed both ways, it may be garbling the Sheriff's Dispatch. I anticipate it should get better when they move to their digital 800 radios.

However, their northern towers are in Swisher and Solon. These two are 37 W.

There's a tower in Oxford as well that has comparable power.

The lower power means you can barely receive it into Linn County, even at the county line.

The weak signals tend to get cut off by the P25 decoder when they get weak enough.

The Iowa City and Coralville Towers are over 100 W.

They do have Sheriff Dispatch simulcast on 151.37 and a TG on the TRS at this point.

There are people in Iowa City on the scaniowa list who may be able to help you as well. It's on Yahoo.

I only monitor Johnson County when I am there. Linn County plans to go to a similar P25 Standard setup.

Johnson County decided against encryption as a money saver.

To add to the rest of the discussion, law enforcement isn't as concerned about being monitored in Iowa. They know a few tricks around it.

Did ridealongs with both Linn County and Cedar Rapids for my senior thesis project. They were not alarmed and knew they were being monitored.

A lot of these agencies have MDCs, including Iowa State Patrol. Dispatch can send sensitive info to them by e-mail or MDC message.

If encryption were to happen, it would be on the talkgroups of narcotics, tactical teams and investigators. I saw some idiot on the local paper's website posting word for word what the local tactical team was saying during an armed standoff. I was angry at such irresponsible action.

The person put that a neighbor was going to the window. This could have been a disaster.

I still think this is few and far between. There are going to be idiots with scanners or access to scanner feeds.

Just my humble opinion.

Actually it's not. We buy hundreds of radios every year with encryption, and also hundreds that do not add it because of the cost. For an otherwise identical radio, adding multi-key P-25 encryption adds almost a grand. It's a bit less for single key, but we never buy single key radios. And except for hassles with inter-agency mutual aid, we would most likely run full time encryption on all our law enforcement talkgroups. Even though the vast majority of radio traffic does not have the slightest need to be encrypted, most of the cops on the street will never think "ooooh, I'm about to say something sensitive, I better flip the switch". At our next re-programming, we will take the switch away from them. If they are on channels X, Y, or Z they are clear, and all others are encrypted.

We're doing basically the same thing, Jim, in St. Louis County - although I doubt we buy as many encrypted radios as you do since we don't buy many. We have few interagency problems because about 20 yrs. ago we licensed 5 frequencies which are known as our riot channels (Riot A, B, C etc.) , for not only our cars but also all municipalities, adjoining counties and agencies to make use of. So interagency communications across St. Louis County, City and adjoining counties can be seamless. It, of course, took a few years for everyone to install the frequencies but it's worked very well for a long time. There are also very few (only one or two) departments (out of 81 municipalities) in the area which are encrypted. We do have a new radio system going in over the next year or two but only to replace our now very old system!

ADP does not add anything like that, CHEAP and it works. Strapped is what will be the norm.

WOW what a group thanks for all the help! Thank you Thank you. Talk about informational overload scanning is going better and I will check out scaniowa which I am a in that group also, but I haven't checked out in awhile.

Could be the VIDA switch they are using for County Traffic.

When it is routed both ways, it may be garbling the Sheriff's Dispatch. I anticipate it should get better when they move to their digital 800 radios.

However, their northern towers are in Swisher and Solon. These two are 37 W.

There's a tower in Oxford as well that has comparable power.

The lower power means you can barely receive it into Linn County, even at the county line.

The weak signals tend to get cut off by the P25 decoder when they get weak enough.

The Iowa City and Coralville Towers are over 100 W.

They do have Sheriff Dispatch simulcast on 151.37 and a TG on the TRS at this point.

There are people in Iowa City on the scaniowa list who may be able to help you as well. It's on Yahoo.

I only monitor Johnson County when I am there. Linn County plans to go to a similar P25 Standard setup.

Johnson County decided against encryption as a money saver.

To add to the rest of the discussion, law enforcement isn't as concerned about being monitored in Iowa. They know a few tricks around it.

Did ridealongs with both Linn County and Cedar Rapids for my senior thesis project. They were not alarmed and knew they were being monitored.

A lot of these agencies have MDCs, including Iowa State Patrol. Dispatch can send sensitive info to them by e-mail or MDC message.

If encryption were to happen, it would be on the talkgroups of narcotics, tactical teams and investigators. I saw some idiot on the local paper's website posting word for word what the local tactical team was saying during an armed standoff. I was angry at such irresponsible action.

The person put that a neighbor was going to the window. This could have been a disaster.

I still think this is few and far between. There are going to be idiots with scanners or access to scanner feeds.

Just my humble opinion.

I am in Iowa City. I can hear Johnson County on the analog side of it. But Iowa City went all digital a couple of weeks ago, Johnson County hasn't made the switch yet. I reset my scanner and I can now pick up some of the digital channels but some of it sounds garbled, if that make sense. So that makes me think I dont have one of my settings not right yet. I have only had this scanner for a couple of months and its taking alittle getting use to.

You're trying to pick up Johnson County?

What type of system do you have it programmed as? Should be programmed in as a Project 25 Standard system. The RR freqs should allow you to hear it if you have I programmed my BCD396XT myself. I'm from Cedar Rapids.

I can hear the Johnson County System when I am down that way.

In the north part of the county, they do have weaker towers.

Where are you located? The Iowa City core area or Northern Johnson County?

Iowa City/Coralville has a simulcast system of higher power over 100W.

The Swisher and Solon towers are 37 W.

The digital audio isn't 100% in the northern part, but I can receive.

Trying to pick up Johnson county, Iowa. I am trying to scan the Johnson county P25 System. I used FreeScan to program my scanner which is BCD396xt. I have had for a couple of months now. Still trying to get used to it. I think I just don't have something set right.

Ok. Out of curiosity. You've requested help from the BCD396XT group, do you own a scanner that has Trunk Tracker 4 capabilities such as a Uniden BCD396 T or XT or 996 or the Radio Shack equivalent product? If you do not then you will need to purchase one in order to hear the new system in your area.

However, if you have entered the frequencies into a compatible scanner then perhaps you either have the scanner programmed incorrectly or there is encryption involved in this system.

A little inside information regarding where you live will help those wishing to assist you in resolving your problem. Where do you live? Just mention the city or county. Specifics aren't required, just the general location will be sufficient.

There are many folks here who program their scanners via software. Others do it manually. If you wish assistance in programming manually I can help. If you would like to contact me directly then feel free to email me at eph39@...

Thanks,
James

However, the Online manuals are In stock!

I'm sure the printed ones will be avail soon for the
rest of us; I didn't jump for one myself.. now that I see that
other people wanted them so much I'm glad; I'm happy enough
with my 396XT software+ Markscanners online for the moment.

Now it gets even better, Jeff put one on his Ipad.. too cool..
so cool.. way cool!!!

4909. Re: Cant hear the digital freqs!! Help

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-23 03:36:29 UTC
From: bryan_smilee
Topic: 4882 Message: 4909

The garbling could be encryption. I can't speak for the law enforcement side, but some of the talkgroups used by Fire and EMS units in Johnson County are going to be encrypted. I was told that a majority of the law enforcement talkgroups are going to be encrypted as well.

Below are the current encrypted talkgroups programmed in a couple Harris portables that I have access too. This could possible change when everybody switches over, which I am told won't happen for a couple months.

Encrypted:
Event Channels 7-11
Fire Private
ICFD TAC (Iowa City Fire Department TAC Channel)
HAZ TAC (Johnson County Hazmat Team TAC Channel)

So far the following channels are not encrypted:
ICFD Paging Channel (ICFD PG)
ICFD Acknowledge Channel (IC Fire)
Johnson County Fire Paging (CO Page)
Johnson County Fire Acknowledge Channel (New Fire)
Event Channels 5 & 6
UIHC Security
JC TAC (ICFD to County Fire TAC Channel Patch Talkgroup)
800 Direct (Talk-Around)
Interop Channels ☐ Mutual Aid, VHF Fire, ST. Fire, ST. EMS,

Each county fire department has an OPS and TAC channel. Not sure what county departments have their TAC channel or OPS channel encrypted.

Hope this helps.

4910. Band Plan Question...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-23 21:09:13 UTC
From: Lance Star
Topic: 4910 Message: 4910

If you set up a Motorola type II UHF system. Does the radio read the Band Plan talble in sequencial order? Or if you select (scroll to highlight the band plan number) then hit menu to exit that setting, does the radio remember the band plan selected?

Also, I saw someone post a generic band plan for Mot. II UHF (400 mhz) systems but can't seem to find it. Freescan will allow computing the upper freq. limit in the band plan if you provide base, offset, spacing.

So, can you set up a "generic" band plan starting at 406.00 with an offset of 380 and spacing of 12.5khz and then calculate the upper freq. and be done? I know some systems don't start at 406.00

Does this radio know how to calculate the upper freq automatically?

Went to set up a custom search for this band with control channel only, then noticed the Band Plan menu below it.

Thanks much!

4911. 396XT Band Plan Question...

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-23 21:46:20 UTC
From: milcom_chaser
Topic: 4911 Message: 4911

Does this radio read the Band Plan Table in sequential order, or does it read only the one you select? seems if I select Band Plan 2 and back out of that menu and go back in, the radio defaults to Band Plan 0.

Does the radio automatically calculate the upper freq limit in the Band Plan Table? For example in creating a Motorola Type II UHF (400mhz) system? Freescan calculates the upper freq. in the Band Plan Table once you enter base freq., offset, and spacing.

I know not all systems start at 406.00 mhz but thought I saw a post to create a generic Band Plan Table. I have an old list I got from a URL link showing frequencies, Hex/Dec offsets, but it only is for 25khz spacing. Does anyone have a list showing newer like 12.5khz

Thanks much!

4912. Backlight during C-Ch. search?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-25 06:00:31 UTC
From: Lance Star
Topic: 4912 Message: 4912

I set up the 396XT to do a Control Channel only search in the 406-416mhz band. When it finds a system, it reads the SID and if there is traffic, plays the audio. However, the backlight does not come on...

In the settings menu, I have the backlight mode set to Squelch.

P25 level is set to 80.

If it is decoding calls it should turn the backlight on, or is there something missing here? or does this need to be addressed for the next firmware release...

Thanks, Happy Holidays...

4913. Re: [BCD396XT] Backlight during C-Ch. search?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-25 07:14:29 UTC
From: Jeffry Rehm
Topic: 4912 Message: 4913

I am not too sure but, I have heard that with trunking systems, (and with some other scanners but not sure on this one) that trunk settings don't include a squelch setting (It;s automatic) so the squelch setting for the backlight may not work.

I am sure I am wrong but it is an idea I thought of.

I set up the 396XT to do a Control Channel only search in the 406-416mhz band. When it finds a system, it reads the SID and if there is traffic, plays the audio. However, the backlight does not come on...

In the settings menu, I have the backlight mode set to Squelch.

P25 level is set to 80.

If it is decoding calls it should turn the backlight on, or is there something missing here? or does this need to be addressed for the next firmware release...

Thanks, Happy Holidays...

When the radio scans a trunk system it will turn on the backlight...

Will have to see what UPman has to offer about this.

Thanks for you input however.

I don't know if we will get anymore firmware updates they just released the home patrol and i got a email from GRE today they are going to be bringing out a two new scanners this year that will be on display at the ces expo in Vegas during January they said they would be revealing a new easy to program digital radio and said they would be unveiling a new digital scanner that would change digital scanning. With this on the horizon i have to think uniden has had time to collectively take the input it has gotten from the home patrol users and XT users and will probably be releasing a new version of new age digital scanners of there own at some time this year. But only time will tell and i cant see the future but that would seem to be the most logical chain of events for scanning in 2011.

Merry Christmas,
Bob

The Home Patrol is not a replacement for the XT series scanners, and GRE's plans, if anything, may promote a firmware release depending what they have up their sleeves. I don't see how it could prevent a Uniden firmware update, however.

That said, the XT was really just a minor update to the T series (minor in the grand scheme of things although there are some great changes), so I wouldn't be surprised if there is an XT replacement in the future.

That replacement could be the 'next generation' Home Patrol, or that model could be an addition to the HP line only and a new standard model may be in development. Still, I wouldn't look for anything in the near future except the more advanced Home Patrol. Not sure when that might be planned, but I bet while they are working on that, they are not working heavily on any other scanner models. There are only so many engineers available.

Interesting about GRE. I bet one is a digital version of the PSR-700. Not sure what the other might be, however. It would seem the next step in digital scanner revolutions would be a scanner with an open source DSP that would allow the scanner hackers to add any scheme they want (short of encryption) - ala they are doing with PCs and some of the radio schemes that people are wanting (ProVoice, MotoTRBO, Open Sky). That *would* be revolutionary.

I would like to see the whole back-light operation revisited in an up- date.

When it is set to come on during reception, it only winks briefly. By the time you turn your head to look at the channel ID, the light is out.

Yes, I use audibles as well, but the selection is limited. One beep for South 1. two beeps for South 2, warble for fire. The colored lights are very useful. If nothing more than blue for police and red for fire channels etc..

While I have my soapbox out; let me also suggest also incorporating a quick mute option. Muting would be very handy for exactly what the name says. Often I need the silence for phone calls, replying to spouse, etc. I like the current volume control operation but it is a bit cumberson for temporary muting. Simply holding down the volume knob could be used to enable/disable muting.

Tuning off the radio and rebooting is simple but takes far too much time.

Hopefully muting can be added to the existing radio and certainly in following models.

OT; I bought a PRO163 during the Black Friday sale. I remember now why I switched to Uniden radios! GRE still hasn't figured out how to buid an rf front end. Otherwise a nice radio.

Jim

Hit the MENU button to mute the scanner. Hit again to unmute.

Just saw a copy of the GRE announcement, and it looks like only one
scanner will be revealed at the CES (most likely the digital version of
the PSR-700).

Only UPMan knows for sure. But I would bet there is an update coming, and soon. With the Rat Shack Pro-106 being sold pretty cheap these days, Uniden needs to create some incentive into us buying the 396XT instead, especially after they add some great new features to the firmware... hint hint....
Happy Holidays,
Bob

Sorry i read that on the move and it sounded like they were introducing the simple to program one and another one i just read the whole thing and Joe is right they are only putting out one new scanner. I believe it will be a digital version of the GRE PSR 700 this will probably be the GRE PSR 800 digital radio. If that's the case i hope uniden comes out with a more advanced versions of the home patrol but that are base/mobile or portable style radios and not this weird shaped scanner the home patrol 1 is. I mean come on there's not even a line out i have to use a powered speaker to listen to it in the car and its way to big to be a portable. So i hope uniden changes the physical design but keeps the new technology behind it.

Bob

With this on the horizon i have to think uniden has had time to collectively take the input it has gotten from the home patrol users and XT users and will probably be releasing a new version of new age digital scanners of there own at some time this year. But only time will tell and i cant see the future but that would seem to be the most logical chain of events for scanning in 2011.

4926. New Firmware Wishlist

Yahoo group: BCD396XT (2008 — 2010)
Date: 2010-12-26 16:28:05 UTC
From: BOB Foxwoods
Topic: 4926 Message: 4926

If there is an update in the process, and I stress IF, then here are a couple of what I think are simple updates that will enhance the 396XT for me:

1. The ability to manually revert to the last active channel / talkgroup

2. Enable the display to show the found NAC- CTCSS- DCS code without flashing it. The recording/logging software out there does not always log the tone due to the gate time of the flashing display. Make it stationary.

3. When monitoring an encrypted CONVENTIONAL channel, the radio does not scan past it. It remains on the encrypted transmission. Thankfully, the radio does however continue to scan when the encrypted transmission is part of a trunked system. Make that user switchable also. Sometimes you want to log the talkgroup that is encrypted but never see it on the display because it scans by it so quickly.

Anyone care to add anything?
Bob

Only the display should flash the data - the communications link should
not 'flash' it.

4.) Backlight needs to come on during Control Channel only searches.

5). When close call becomes activated during a scan, if I turn the knob to continue scanning, it turns close call off. Then I have to turn it back on again...

Joe,
All of the logging software I have tried seems to get the tone info at the same time as the radios display shows it. When monitoring or scanning a freq that is in the tone search mode, whether it be analog search or digital search, the radio will display the tone that it finds after the squelch opens, but there is a slight delay. The problem is all of the logging programs take a sample of the radio data (tone info included) at the time the squelch opens. The delay in the tone being displayed causes the logging software to display a blank for the tone.
This is why I wish the tone would show up and stay on without flashing on and off as the pro-106 does.
Bob

I would like to see a Tone found in a search to be indicated on the display as such, example you could use an asterisk next to a found tone * or some other if you wish. This is mostly for history logging it would indicate the tone was found in a search.

That's a great idea. I like that over the flashing. (it seems every time
you look at the scanner, it's in the blank cycle)

I would also like to see the word search where the tone would be when the channel is programmed to search for a tone and while searching and not found a tone that way I know it's programmed with search that too would also show in a history log.

I for one can only Hope so (firmware update to add features)

As i upgrated from the 396t to this and was able to sell my 396t on ebay'
I LOVE the radio
however I will not be able to spend antother 550 to up grade this time for a couple years

I again , do love the xt really great rig

Only UPMan knows for sure. But I would bet there is an update coming, and soon. With the Rat Shack Pro-106 being sold pretty cheap these days, Uniden needs to create some incentive into us buying the 396XT instead, especially after they add some great new features to the firmware... hint hint....
Happy Holidays,
Bob

Paul,

I sent a message regarding the 396XT Backlight not activating during a C-Ch. Search. I think I called you Bob by mistake. My appologies.

Anyway, Gabriel over at product support confirmed this condition with a 396XT. He said he would pass this new finding on. That would be a great fix for the next firmware release...

Thanks again for all your support with this product.

I would like to add the following:

1. A user setable option to have the backlight turn on automatically when the radio is plugged into external power and turned on.

2. A true battery charging algorithm in the firmware that uses negative delta slope to determine the end of charge instead of blindly running a countdown timer that can potentially overcharge a partially discharged battery. (Please correct me if I am wrong about this one.)

You're not wrong, but you're not right, either. :-)

If you do that, you would be detecting the charge completion of the first cell to reach a full charge since the cells are in series. That means only one of four cells will be charged.

To charge NiMHs correctly would require a physical change in the scanner to separate the cells and charge them individually. THEN you could do as you suggest. But, that would also likely add $25 to the price tag.

Honestly, don't hold your breath for such a change in a current production model. I think it's also unlikely for newer models either since the current scheme works for a basic charge and most people know the proper way to charge cells is in a battery charger, not in a scanner.

It IS nice that the scanner is smart enough to detect alkaline cells and not try to charge them.

I would like to reiterate my firmware update wish...

The ability to select what flashes on the first display line. I still like the display of the older "T" models where the first display line alternated between "System Name" and "Group Name" for trunked systems. The "XT"s alternate between "Site Name" and "Group Name". This is hard on those of us (or at least me) who live in multi-state areas, or who travel a lot since site names could easily be confused unknown "sites" or by repeated names. I use a system naming convention of MD-xxxxx (MD-Montgomery Co / MD-Pr Georges Co /MD-Charles Co / VA-Arlington Co). While I'm probably in the minority, I know that others have asked for the same.

When scanning an EDACS trunking system, the HOLD button stops on the control channel. For me, it would be much better to stop on the last active channel. Often, I hear something short and cannot look at the screen fast enough to identify the channel.

When I start a weather channel scan, how can I force it to look further after it has locked on a channel.

The same way you continue any other scan or search - turn the scroll knob.

I don’t want a 2-sec delay workaround, I want the HOLD key to do something sensible in this situation: Stop on the last active channel.

If you press HOLD on a trunking system when the scanner has not stopped on any channel, by design the scanner holds on the control channel, opens squelch (if there is a signal) and displays the system and site IDs as well as channel grants as they are received. This ability provides valuable diagnostic abilities for troubleshooting trunked system reception issues.

Good point Paul. But I think the poster meant he was looking for an improvement in where by pressing MANUAL key at any time, instead of the radio stopping at a seemingly random location, the radio will revert to and hold on the last active channel. Please put it on the list!
Happy New Year Paul
May you and your staff blow us away in the coming year with THE ultimate of all radios
Bob

Well on second thought, there isn't a MANUAL key on the 396XT, so obviously I own way too many radios and get them all mixed up, lol
Oh well, wishful thinking for the wishlist

There are two things stopping scan can do:

1. Simply stop the scan on the channel the scanner is currently on.

2. Stop the scan and return to the last active channel.

Uniden uses the first scheme. GRE uses the second.

While there are times when returning to the last active channel is nice,
there are also times when you want to scan to another system then stop
on that system. Scheme 2 does not allow you to do that - it always goes
to the last active channel.

I've used both methods, and neither is appropriate all the time. I'm
sort of glad I have the choice to use one scanner or the other depending
on what I want to do, and would not be in favor of both scanners using
scheme 2. That said, a user setting to determine the scheme would be
ideal. That way the user can decide how they want the scanner to operate.

Thanks for answering... Trying to set it up with the PC. There is no manual and the website isn't very friendly for new operators. Would like to monitor city and county.

Here is a link for a manual. Its online however, you can buy it as well.

Very helpful: http://marksscanners.com/396XT/396xt.shtml

Paul -

Thanks for the insight into why HOLD on a trunking system works the way it does.

My take on it is that the irritation of getting a blast of trunking control channel is much worse than the benefit of the diagnostic data (which I have never found useful).

How about this: Change HOLD to display the last active channel. Display the system, site IDs, channel grants and trunking type whenever the rotary knob selects any trunking control channel. That would expand the utility of the radio to assist manual searching for and identifying trunking systems and make the HOLD key much more user-friendly.

Joe, your analysis of ‘stopping scan’ was very interesting and helpful in this discussion.

Doug
